INTRODUCTORY PROSPECTUS

OF THE

CONTENTS

OF THE DISSERTATION OF THE

THEOLOGY OF HINDOSTAN.

THE extensive subject of the Indian Theology is considered in the following Differtation under two general heads, the physical and symbolical, and the more pure and sublime. The ancient physical theology of India is principally treated of in the former part of this Differtation, which is divided into four sections; and, in the course of discussion, the Author has examined in what points the Religion of the Ancient Indians resembled, 1. That of the Scythians; 2. That of the Ancient Persians; 3. That of the Ancient Egyptians; and, 4. That of the Early Greeks.

As the subject is complex, and, consequently, as no very exact order of arrangement in the investigation of such a multirude of obscure and abstracted topics could be adhered to, he solicits the attention of the reader to

A 4

the

the subjoined EPITOME of its contents. In the first fection, retrospective on the ancient religion of Scythia, and pointing out its analogy to that of India, the following points feemed to demand particular notice: Divine rites were first celebrated, and the sublime precepts of philosophy first taught, in the sacred solitude of groves and caverns - the caverns of Salfette and Elephanta, undoubtedly stupendous subterraneous temples of the Deity - the particular rites of religion practifed, and fciences taught, in those caverns, referved for confideration under the fecond general head - the cave of Zoroaster, of Epictetus, of Pythagoras, and of Mohammed. - The aftonishing extent in ancient times of the confecrated groves of Scythia and of India - the idolatrous devotion practifed in confecrated groves feverely anathematifed in holy writ - the fanguinary rites performed in those of Scythia - the very ancient, but not the original, religion of India proved to be of a fanguinary cast - the Ne-RAMEDRA Jug, or human facrifice - the Aswam-MEDHA Jug, or horse-facrifice - the Gomedha Jug, or facrifice of the bull-the benevolent Hindoo and the bloodless law of BRAHMA attempted to be exculpated from the original guilt of these sanguinary rites, by supposing an interpolation of the VEDAS, and a possible mixture of the barbarous cultoms of Scythia with those of India, during the early intercourse of the two nations in the northern regions of Hindoltan that intercourse proved from various circumstances, but particularly from the impreffive one of an ancient conquelt of Hindostan by Oguz Cawn, and recorded by Abulgazi, the Tartar historian. The subject confidered in a more general point of view-the probable origin of all human facrifices, that general belief which prevailed throughout the ancient world in the agency of DEMONS, and in the frantic terrors inspired by superstition - a description, from the Asiatic Relearches and Mr. Holwell, of CALLEE, the fable goddess of India, with an accompanying engraving of that formidable divinity, on whose baleful altars human victims were accultomed to be offered. - Human facrifices feldom practifed by the ancients, but in cases of the greatest national emergency; as war, FAMINE, PESTILENGE, when the nobleft possible victims were felected. - The various modes of devoting to death the miferable victim specified - particularly the more horrid rites used by the SCYTHIANS, as described by Herodotus - decapitation, inhumation, or burning, the general mode adopted in India - an inflance of the former from the HEETOPADES - human facrifices common at the funerals of the ancient fovereigns of Scythia, or Tartary, and at those of the Indian Rajahs-instances of the latter from Texeira, Anciennes Rélations, Tavernier, and Orme's Historical Fragments. Profound veneration both of the Indians and Scythians for the MANES of their ANCESTORS exemplified from a paffage in Herodotus, from another in the SACONTALA, and from Mr. Wilkins's account of the ccremony of the STRADHA in the HEETO-PADES.

In the second section, relative to the Persians, the very remarkable similaride subsisting in the leading principia

principia of the religion of ZOROASTER and BRAHMA, the great legislators of the Persian and Indian empires, is pointed out - particularly in their mutual belief in one supreme presiding Deity, governing the universe by inferior agents, and adored in Persia under the name of OROTASDES, and, in India, under that of BRAHME - in the parallel powers and fimilar office of the mediatorial MITHRA and the preferver VEESHNU-in those of the malignant AHRIMAN and the destroying Seeva - in their account of the conflicts of the good and evil Genti, or Dewyans, contending for superiority in the creation - and in their kindred adoration of the SOLAR ORE and of FIRE, A general view of the mythology of the Hindoos, and an enumeration of the deities most conspicuous in that mythology. The Sun and ELEMENTARY FIRE confidered in both countries as the most perfect emblems of Deity. Worship paid to the Sun, or SURVA, under the plea of adoring God in that orb, whose throne the Persians supposed to be seated in it, afferted to have been in ancient times nearly as general in India as in Persia - proved to have been so from a very great variety of passages inserted in order, and extracted from the VEDAS, the AVEEN ARBERY, and the three principal translations yet made from ancient Sanscreet writings, viz. the GEETA, the HEETOPADES, and the SACONTALA - the fect of the fun-worshippers at this day called SAURA - the account given, by Philostratus, of a most superb temple to the Sunanother from the Ayeen Akbery. - The Indian mysterious triliteral word AUM the same with the Egyptian om, and both used to fignify the solar fire. - Firetemples mentioned in the fame book to have flourished at Benares, Rai-Jird, and other places, in the time of the fecond Boodh, about a thousand years before Christ - The Moon, or CHANDRA, a male deity in Hindostan - that very singular circumstance adduced in proof that India has not borrowed her mythology from Egypt, where the Moon was a female divinity, adored under the name of Isis, and whence the Greeks had their horned goddess Io. - The Indian Chandra drawn by antelopes - a RABBIT his fymbol, as the CAT was of the Moon in Egypt, for a curious philosophical reason adduced from Plutarch.-FOUNTAINS facred to the Moon in India - no less than 260 fountains confecrated to that orb at Kehrow, in Cashmeer - a circumstance pointed out as exceedingly remarkable, being the number of the days of the ancient year. - The two supreme rajah families of Hindostan denominated Surva-Bans and Chandra-BANS, or children of the fun and moon. - The elements personified and venerated under various names -AGNEE - VARUNA-PAVAN - CREESHNA, the Indian Apollo - CARTICEYA, the Indian Mars -LACHSMEE, the Indian Ceres-SERASWATI, the Indian Minerva - Cama, the Indian god of love -BHAVANI, the Indian Venus, &c. &c .- From adoring God in the fun, the Orientals proceeded by degrees to worship the planetary train - that worship promoted by their general cultivation of the science of aftronomy. - An enlarged view taken of the ancient SABIAN SUPERSTITION - its rapid progress over all the

the East-Stigmatized in Job and the prophetic writings. - The rife and progress of astronomy in Afra - purfued with uncommon ardour in India remains of stupendous astronomical instruments at the observatory of Benares and other places. - The Inchans believed the stars to be exactly what the Phoenicians imagined their zophesamin to be, animated INTELLIGENCES - of the former, evidence adduced from the Aveen Akbery; of the latter, proof brought from Bilhop Cumberland's Sanchoniatho, - Their preatest princes, legislators, and heroes, consequently exalted to the fkies - reprefentative images formed of them - those images by degrees adored instead of their originals. - Various animals, as their respective symbols, affigned to them by superstition - those animals venerated in their turn. - A retrospective survey of the deities and fymbols of Egypt, and a short parailel, preparatory to one more extended, of those deities, and their fymbols, with the Indian divinities and fymbols. - The bull of Ostats - the bull of SERVA. - SERPENTS facred in both countries - the EAGLE of Jove - the GARUDA, or eagle of VEESHNU. - That furvey extended to the temples of either country - the fimilitude aftonishing, but referred for full examination after the caverns of Salfette and Elephanta shall have been described. - The stupendous mysteries of superstition practifed in them attempted to be investigated, and the profound arcana taught in them unfolded. - The Author enters upon that talk, hitherto unaccomplithed, and even unattempted, by the greatest Indian scholars and the mostcelebrated

celebrated Afiatic travellers, with diffidence, blended with firmness, refulting from long and elaborate invelligation into fuch books of antiquity as treat of CAVERNS, and fuch modern publications as best deferibe the GROTTOES of Egypt, the ROCKY SUBTER-RANEOUS shrines of MITHRA, and the particular caverns in question. - The authors, in this part, more immediately confulted, are Porphyry, in his very curious and beautiful treatife de ANTRO NYMPHARUM; Mr. Norden's Account, and elegant engravings, of the EGYPTIAN ANTIQUITIES; and Montfaucon and Dr. Hyde on the MITHRATIC CAVES, RITES, and SYM-BOLS. - Convinced that the mystery, considered by M. Anquetil Du Perron and M. Niebuhr as inscrutable, was only to be solved by a still closer examination of the principles of the ZEND and the VEDAS, by means of Dr. Hyde and Sir William Jones, he attempts to investigate still deeper those sacred depolitories of either religion. - He enters with forme minuteness into the history of Zoroaster, the REFORM-ER, not the INVENTOR, of the Magian religion; he traces his "fecret footsteps," and those of Darius Hyftaspes, his royal patron, to the " woody solitudes" (as they are expressly called by Ammianus Marcellinus) of the venerable BRACHMANS in "Upper India," most probably the mountains of Nau-GRACUT, and, again following the reformer back to Persia, after having been instructed in the most profound and mysterious rites practifed in their confecrated caverns, attentively marks his motions, and observes his imitative conduct. From the invaluable treatile OF

Library Regr. No.

of Porphyry above-mentioned, the author is enabled to describe the particular ornaments of that lonely CAVE to which he afterwards retired in Media, " the astronomical symbols, and other mathematical appararus," with which it was decorated; and, from his reviving, throughout Persia and Media, the veneration for fire, as well as his erecting the stupendous FIRE-TEMPLE at Balk, the author forms those conclufions which are fubmitted to the reader in the pages more immediately following. - The author supports his deductions, by a very curious passage, given at large by Origen, from Celfus, one of the most learned philosophers among the ancients, concerning the SEVEN GATES, emblematical of the SEVEN PLANETS, crected in the MITHRATIC caverns, through which the fydereal Metempsychosis was performed; and contrasts that paffage with others cited from the Aveen Akbery. in proof that there actually did exist, even so late as in Abul Fazil's time, among the rocky mountains in Upper Hindoftan, excavations the most numerous and prodigious, and CARVED IDOLS of the most aftonishing fabrication.

A general view is now taken of the sculptured imagery in the caverns of Elephanta, in which are exhibited, as well the substance of all the preceding descriptions, as the respective hypotheses formed from the survey of them by French and English travellers.

— Those of Niebuhr by far the most correct and satisfactory—a more particular description of the Elephanta Pagoda; its style of architecture, dimensions, ornaments, recesses, cisterns for the water of purification,

purification, &c. &c. - The stupendous figure of the grand Indian triad of Deity, BRAHMA, VEESHNU, and SEEVA, minutely described, and illustrated by an accurate engraving. - The other more remarkable flatues fuccessively delineated. - Both the figures and their ornamental fymbols plainly allufive to the theological notions at this day prevalent among the Flindoos. - The Hindoo nation divided into innumerable fects, but ultimately branched forth into two principal ones, that of VEESHNU and that of MAHADEO, or SEEVA, i.e. the worshippers of the Deity, in his preferving and his destroying capacity. - The fystem of religion professed by the former, throughout this Differention, represented as the primitive, mild, benevolent, lystem of theology, originally established in Hindostan. - That professed by the latter full of terror, and productive of the most licentious practices. - The indecent worthip of Serva, his rites and fymbols described with as much delicacy as possible, confistently with perspicuity. The LINGAM similar to the PHALLUS of the Greeks and the PRIAPUS of the Romans. - The facred recess, or Sacellum, of SEEVA. - An extended furvey of that curious but degrading superstition. - The Lingam an emblem, in India, of the creative power - allotted as a fymbol to Seeva, the DESTRUCTIVE POWER, upon that philosophical principle of the Brahmins, that " to defirey is only to generate and re-produce in another way."

The author now enters on the third fection, containing the parallel of the INDIAN and EGYPTIAN fyftems of theology, in which that base species of worship worship forms the first distinguishing feature. - A description of the origin of Phallic worship in Egypt, from Diodorous Siculus .- An inftance exhibited, from Athenœus, of the splendour displayed at a Phallic festival, celebrated in Egypt by Ptolemy Philadelphus. The same with that of BAAL-PEOR in Scripture. -The Greeks borrowed and infamoufly refined upon it in their orgies of Bacchus. - the remarkable fimilitude of a fact recorded in a prophane writer, relative to the introduction of the PHALLICA at Athens, and a circumstance related in Scripture, in regard to the Philistines, who had captured and profaned the ark of God. - The former history in the prophane writer no forgery from the latter, as afferted by Patrick and Bochart; but the mode of punishment and propitiation agreeable to the usage of Eastern countries. -Demonstrated to be fo by a passage in Tavernier's Voyages in India; and another in the Sketches of Mr. Crauford. - The Author apologizes for going fo largely into fo difagreeable a fubject; but affirms, that, without the explanation, the Indian system of theology, of which it engroffes fo large a portion, would be utterly unintelligible. - He concludes it for the present, since the enormities promoted by the doctrine must be noticed in a succeeding part of the Differtation, by displaying its atrociousness; and refers back, for the genuine origin of fuch nefarious rites, to the principles and practices of that vitiated fon of NOAH, the earliest idolater of the post-diluvian world, who led the first colony from Chaldrea to the banks of the Nile. - That the most venerated spors

of India are the ATTRIBUTES OF God personified, or RAJAHS exalted, by their piety or bravery, to the rank of divinities, must be evident, from the general view of this Pantheon of India; since superior power could not be displayed in hieroglyphic representation more forcibly, than by a figure with numerous bands, nor excelling wisdom more aptly delineated than by a circle of beads; since the radiated crown of glory naturally points out the divinity of the possessor; and the ferpent, from his great vigour and revirescence, is equally in Egypt and in India the known emblem of Deity.

The Author, continuing the parallel between the theology of India and Egypt, proceeds to examine the more numerous, and scarcely less astonishing, excavations and hieroglyphic sculptures of CANARAH, in the island of Salfette - the most authentic accounts of them, those inserted in the seventh volume of the Archæologia, and in the preliminary discou se to Mr. Anquetil's Zend-Avesta - The island itself and the external appearance of the caverns described - The rocks themselves, in which they are hewn, bear ftrong marks of calcination - Afferted by M. Anquetil to be hewn by the chiffel into a pyramidal form - Pyramids to constructed to refemble the figure of a flame of fire - The external figure adduced as probable proof of the ancient internal worship - The caverns of Canarah, from their appearance, denominated by the natives " the city of Canarah" - A general description of the caverns - The eminences of the rocks probably used by the Brahmins as VOL. II. B observatories

observatories - The architecture considered - This pagoda, from its height, and from its arched roof, far more magnificent than that of Elephanta - The tanks for ablution numerous, and the temple of SEEVA, with the PHALLUS, every where discernible - Visible receffes for the lamps that, probably, were kept continually burning - The aftonishing height of the GREAT ALTAR, and magnitude of the coloffal flatues - An attempt to display, in animated language, the stupendous magnificence and splendour of the Mithratic worship - the origin of hieroglyphics - The hieroglyphics of Egypt compared with those of India - The figns of the Indian zodiac still visible on the comices of the cavern-pagodas - The great fimilarity, in many points, between the INDIANS and CHINESE - The primeval legislator and, probably, the people of either country originally the fame -A MITHRATIC GROTTO discovered in Egypt, and described by M. Savary - A remarkable description, in Ezekiel, of a cavern, supposed by the Author to be Mithratic - or rather the MYSTIC CELL of OSIRIS -Ofiris only the African appellative of Mithra-A description of the MENSA ISIACA, or Bembine table, and the hieroglyphics engraved upon it-compared with those in Salsette and Elephanta.

After taking an extensive survey of the growth, progress, and extinction, of the Mithratic devotion, the author proceeds to examine the moral and philosophical doctrines taught by the Brahmans in their cavern-recesses — which immediately leads to the fourth section on the physical and symbolical worship

of India, and introduces the parallel of the Indian and Greek theology. - The Metempfychofis the most diftinguished of those doctrines - falsely ascribed to Pythagoras - originated in India, and first promulged in the GEETA of VYASA, the PLATO of India, many centuries before the birth of Pythagoras - extracts from the GEETA in proof of that affertion - various paffages in the SACONTALA and the HEETOPADES, ftrongly corroborative of it, exhibited in order. -The doctrine of the Metempsychosis, or the notion of this life being a probationary flate, productive in India of the most excruciating and horrible penances, in order by those penances to obtain MOKSH, or fupreme happiness - A description of a Yogez, in the act of penance, from the Sacontala - The fupreme happiness of BRAHME a state of divine absorption. -The doctrine of degenerate spirits migrating through various ECOBUNS, or fpheres, and through animal bodies, to be traced to fome corrupted tradition of the fallen angels - The ELEUSINIAN MYSTERIES OF Greece, as described by Jamblicus and Proclus, and detailed by Warburton in the Divine Legation, compared with the mysterious rites practifed in the caverns of India - The genuine theology of India purer in its principles than any other professed in the world, except the Christian - justly stated to be so by Mr. Hastings, in his elegant letter to Mr. Nathaniel Smith, prefixed to the Geeta - Some most sublime paffages produced in proof, from that Episode and from a translation of the BHAGAVAT, by Sir William Jones - Certain passages in Scripture surprisingly B 2 confonant

confonant to these extracts - Whether this might be derived from any possible connection with the Hebrews? - The fact itself, of any general intercourse between the two nations, denied - and the affertions of Postellus, Dr. Hyde, and others, deriving BRAHMA from ABRAHAM, confuted - Hamilton's account of a Jew colony at Cranganore, on the coast of Malabar, detailed and confidered - possibly the remains of the ten tribes - The VEDAS, however, written at a period far more ancient than that dispersion, and confequently the primitive uncorrupted religion of Brahma could only be derived to them from NOAH. the Menu of the Sanfcreet theologians, or elfe from his more immediate descendants of the righteous line of Shem, who first settled in India.

The Author returns to the parallel of the MYSTE-RIES of India and Greece. - However pure the primeval theology of India, like all the systems of religion practifed in every nation of the ancient world, it gradually declined in its purity, through the venality, fervility, or ambition, of fuccessive priefts - Its progress in degeneracy traced from the age of Vyasa to the prefent day - The first cause of that degeneracy stated to be the symbolizing of the ATTRIBUTES of the Deity - in the veneration paid to brave and pious RAJAHS deceased, especially to those in whom the great Indian deity Veelhou became incarnate - exemplified in the three RAMAS -But, as the amiable attributes of God were perionified and venerated by the Indians, so was that timid race induced, by terror, to deify the evil damons, and their borrible attributes - The walls of ELE-PHANTA and SALSETTE crowded with images allufive to the majestic attributes of God and the magmified virtues of men - The whole train of false deities likewife introduced into the Grecian mysteries -The caverns of Elephanta and Salfette formed with dark ailes and winding paffages, exactly refembling those in the temple of Ceres at Eleusis - The PHALLUS of BACCHUS and the LINGAM of MA-HADEO principal objects in the mystic shews - The enormities confequent of the former groß fystem of worship in Greece and Rome, and of the latter in India, depicted - The former from Herodotus and Livy; the latter from Renaudot and Tavernier-The proflitutions at the temple of the Dea Syria in honour of MYLITTA, fimilar to those of the WOMEN OF THE IDOL in the pagodas of India-particular account of the education and accomplishments of the latter - The furrounding horrors that enveloped the ASPIRANT, and the final raptures that attended INI-TIATION, described from Apuleius, Dion Chryfollome, and Plato - Some curious particulars, related by MEURSIUS, in regard to the NUMEROUS AB-LUTIONS in the Grecian mysteries, compared with those recounted in the Ayeen Akbery, as necessary to be undergone by the BRAHME CHAREE, or Brahmin of the first degree - Mr. Bryant's affertion, that the rites of Isis and Ostras were originally inftituted in memory of the deluge, confidered and corroborated, by the fimilar rites of the Brahmins -The Author pledges himself to prove, that there are Sanfcreer B 3

Sanscreet records of a GENERAL DELUGE in Hindostan — The account of the Grecian MYSTERIES concluded, with an enumeration of other parallel circumstances that took place in the celebration of those in India.

This chapter concludes with an extensive inquiry into that disputed topic, who were the fabricators of the caverns of SALSETTE and ELEPHANTA? - Whether the EGYPTIANS? - The subterraneous grottoes and caverns of the THEBAIS, with their fculptures, described from Pococke, Greaves, Norden, and Savary - Whether the Æthiopians? - An account from Ludolphus of the Æthiopian rock-temples, and their fculptures - A curious passage apparently corroborative of the latter hypothesis from the ARCHAOLOGIA - Another remarkable passage adduced from Ezekiel, in proof that images refembling those in the Indian caverns, decked with fimilar ornaments, and painted with vermilion, were in the most ancient periods adored in Chaldea - the whole, confequently, relics of the ancient prevailing SABIAN SUPERSTITION, or WORSHIP OF THE HOST OF HEAVEN, and fabricated by the ancient CUTHITES.

The Author, in the third volume, emerging from the gloom of SUBTERRANEOUS pagodas, introduces his readers into the splendid temples that adorn the surface of Hindoltan—their height, extent, and the magnitude of the stones with which they are built, stupendous—instanced in the magnificent portico of CHILLAMBRUM, and the circumference of the walls of SERINGHAM.—The most ancient pagodas erected in the form of pyramids, with only one door—and illuminated

illuminated by lamps kept constantly burning-properly compared by Mandelslo to caves. - The more modern pagodas erected in a better style of architecture, and richly decorated within with gildings, carved work, and painting-without, entirely covered with fculptured animals. - The five most venerated pagodas of India, viz. that of JAGGERNAUT - that of BENARES - that of MATTRA - that of TRIPETTY -and that of Seringham, -fucceffively and minutely described from TAVERNIER and others .- An affecting flory relative to the first defilement of Seringham by European armies. - The amazing revenues which these and other pagodas anciently enjoyed - 40,000 fouls supported by the revenues of SERINGHAM alone. - A more accurate furvey of their internal fculptures, and a description of the monstrous idols adored in them. - EGYPT and INDIA feemed to have affembled in these pagodas the animals deemed more peculiarly facred in each country - as, for instance, the Mem-PRIAN BULL - the RAM, facred to JUPITER - and the GOAT, to PAN - are feen blended with the APE of RAMA - the BHINOCEROS - and the ELEPHANT.

An extensive disquisition is now entered into on that disputed point, whether India or Egypt were the elder empire; and which nation first imparted its rites of superstition to the other? — The opinion of Kircher, relative to the settling in India of the Egyptian priests, driven from their country by the ravages of Cambyses, first considered. — The opinion of Kæmpfers, in regard to the great Indian saint Buddha Sakia, (in other words, the god Boodh) — the opinion

opinion of both those antiquarians highly probable, and apparently supported by that of Sir W. Jones, given in the Afiatic Refearches, on the subject of Boods and on the great resemblance subsisting both in the name and the worship of the Egyptian Isis and Osizis and the Indian Eswara and Isa. - The refult of SIR WILLIAM's inquiry concerning a colony of priefts supposed to have settled at TIRHOOT, in North BAHAR - on the whole, favourable to fuch a supposition. -Mr. Chambers's account of the ruins of Mavalipuram - of the Sommonacopom, or stone-deity of the STAMESE - and of the superstition of BOODH .- Additional evidence of an early and familiar intercourse subfifting between the EGYPTIANS and INDIANS adduced. - The structure of their temples similar in point of maffy folidity, magnitude, and extent. - A curfory comparison of a few of the principal structures of each country, preparatory to a more extensive parallel. - Some striking circumstances of national refemblance enumerated; as, first, in their mutual veneration of the facred Loros. - A description of that flower from Herodotus, and a late traveller, M. Savary. - Secondly, in their early cultivation of the SUGAR-CANE. - Thirdly, in their ancient, and once univerfal, diet, having confifted of vegetables. -Fourthly, in their mutual possessing a sacred sacer-DOTAL LANGUAGE, called in India the DEVINAGARI. - Fifthly, in the divition of the people into TRIBES, or easts. - Sixthly, in the numerous abbutions practifed by both people. - And, finally, in their univerfal reverence of the cow and the SERPENT. -

The temples of Egypt, and their fymbolical decorations, largely described from the most authentic and recent travellers.

The Author, in the fourth and fifth volumes, investigates THE MORE PURE AND SUBLIME Theology of India, descended traditionally down to them from the venerable patriarchs, of which the following are the principal outlines :- A REVELATION was vouchfafed by his Creator to man, in a state of innocence in Paradife, concerning his nature, his will, and of the mode by which he would be worshipped. - The Deity not a folitary, occult, and inacceffible, being, but perpetually present with his creatures, and in all his works. - The ancient doctrine of DIVINE EMANATIONS adduced in proof of this affertion - that doctrine, the probable fource of all idolatry, fince it was God himself that was first adored in the Sun, the Fire, and other elements-remains of this purer primitive theology remarkably apparent amidft a thousand superstitions in India. - General division of the Hindoos into four grand tribes, or casts - the tribe of BRAHMA - the tribe of KEHTREE - the tribe of BICE - the tribe of Sooder - the pure doctrines of Vyafa contained in the Vedas. - The Brahmins alone permitted to read the VEDAS - those Vedas explained to have been originally only three, and denominated the Rero Vedathe YAIUSH Veda - and the SAMAN Veda, -All three comprized under the name RIGYAJUHSAMA - and the fourth, or ATHARVA VEDA, proved from internal evidence to be far more modern. - The English, more than any other European nations, have contributed to remove

remove the veil that anciently obscured the genuine religion of Brahma, inculcated in the Vedas, the Geeta, and other Sanfcreet theological treatifes. -An attempt of the Emperor Akber to penetrate that veil. - The affecting flory of Ferzt, and his Brahmin preceptor. - An account of the Sanfcreet language, extracted from Sir William Jones and Mr. Halhed, --The Author next enters upon the discussion of the PAGAN TRIADS OF DEITY, and particularly of the character and functions of BRAHMA, VEESHNU, and SEEVA, the grand Indian triad, of whom an accurate engraving forms the frontispiece of these volumes, -Any comparison of the Indian and Christian TRINITY an infult to the latter; from the immense disparity of the respective characters. - An extensive survey is now taken of the doctrine of the Christian Tri-NITY. - That doctrine delivered down from the ancient Patriarchs, and diffused over the East, during the migration and dispersion of their Hebrew posterity - demonstrated to be plainly revealed in the Old Testament, and to have been believed and taught by the JEWISH RABBI, long previous to the birth of PLATO and the coming of CHRIST. - The true origin of that rancour and contempt with which the Jews are inflamed against the Messian unfolded. -Some objections, urged by fceptical opponents against the TRINITY, answered. - The Jews pay less deference to the WRITTEN than to the ORAL LAW, which they affert to have been delivered to Mofes on Sinai. - An historical account of the celebrated code of Jewish traditions collected by Rabbi Judan, The

HOLY, and called THE MISNA. - Of the two TAL-MUDS of JERUSALEM and BABYLON - and of the two TARGUMS of ONKELOS and JONATHAN. - The former TARGUM the most concise and pure paraphrase - the latter more diffuse, and supposed to have been interpolated. - A progressive view taken of the pasfages in Scripture, establishing some a PLURALITY, and others fo express upon the PERSONAL AGENCY and DIVINE ATTRIBUTES of the MIMRA, or Logos, and the RUACH HARKODESH, OF HOLY SPIRIT, as plainly to evince a TRINITY of divine HYPOSTASES subsisting in the Godhead. - The preceding quotations illustrated, in regard to the OLD Testament, by a variety of extracts from the TARGUMS, and corroborated, in regard to the New, by an exhibition of fimilar fentiments and paffages in the writings of PHILO-JUDIEUS, JOSEPHUS, and others. - The fymbols of the Jews illustrative of this doctrine considered; but particularly the CHERUBIM - with an engraving of the CHERUBIM. - The fentiments of the socient Rabbies exhibited. - The manner in which the High Priest gave his solemn benediction to the people deferibed, and the form in which he disposed his fingers represented by an engraving, copied from Athanasius Kircher. - The mode in which they defignated the incommunicable name of JEHOVAH, viz. by THREE Jops and a CIRCLE, emblematical of a TRINITY in Unity - that fymbol exhibited. - In the ancient myftical character supposed, like the DEVINAGARI character of India, to have been revealed BY ANGELS, the Jop, the first initial letter of that name, accompanied with

with a TRIANGLE - very remarkable, because, according to Kircher, the EGYPTIAN fymbol of the Deity, or NUMEN TRIPLEX, Was a TRIANGLE. - The three persons in the DIVINE ESSENCE compared, by those Rabbies, to the three collateral branches of the Hebrew letter Schin. - The letter therefore confoicuously engraved on the ancient PHYLACTERY, which the Jews, according to the divine command, wore on the head. - Engravings, displaying these various symbols, in the course of the inquiry, presented to the reader. - An account of the famous book of ZOHAR. and of the SEPHIR JETZIRAH, or book of Abraham. - A review of the Pagan TRINITIES, - The ORA-CLES of ZOROASTER confidered - contain internal evidence that they are not wholly fpurious - that affertion proved in a short comparison of the thoretie fystem of theology laid down in those oracles, and the practical worship of the Chaldwans, Persians, and Indians. - The THREE PRINCIPLES mentioned in the Zoroastrian or Chaldaic Oracles, the most early corruption of the doctrine of the Hebrew Trinity. - The Perlian Triad of Deity, OROMASDES, MITHRAS, ARI-MANIUS; or, rather, the three-fold power of the God MITHRA, thence called TRIPLASIOS, to be referred to the same origin. - The remains of this doctrine remarkably apparent in India, not only in the triad BRAHMA, VEESHNU, and SEEVA, but in various fymbolic characters of that myffic Triad recapitulated and exhibited. - An account of a medal found in Siberia, on which is engraved the figure of the TRIUNE GOD, accompanied with a description in Tangutian characters, explained by Colonel Grant, and with an engraving of it from Parsons's Remains of Japhet. - The Peruvians described by Acosta as worshipping an idol denominated TANGA-TANGA, which they affert to mean ONE IN THREE and THREE IN ONE, -A fhort inquiry entered into, by what channel a doctrine, fo improbable to have been the fabrication of mere human reason, as that of a Trinity in Unity, could be propagated among a nation fo remote from the Hebrews as the Peruvians. - The great THREE-HEADED IDOL of Japan described from Kæmpser - an engraving of that idol from the fame author. - The Trinity of Egypt confidered - represented by a olobe, a WING, and a SERPENT. - Its meaning investigated, and an engraving of it exhibited which was copied from the front of the ruins of Luxon, by Mr. Norden, in his Antiquities of Egypt. - An account of the TRINITY of divine persons, in the Hymns attributed to Orpheus. - The doctrines relative to a Trinity taught by Pythagoras, PARMENIDES, and PLATO. - A conclusive retrospect on the subject, and a general recapitulation of the principal arguments adduced in proof of the original polition, that this doctrine was originally revealed from heaven to the ancestors of the human race, known to the Hebrew patriarchs, and propagated, by themselves and their posterity, during their various migrations and dispersions throughout the world. - A furnmary account of the opinions at present entertained by the Jews, relative to the expected advent of the MESSIAH. - Calculations formerly made concerning that event from the course

of the stars. - Those calculations now forbidden by a most tremendous imprecation, in the GEMARA, that the bowels of the calculator may burft afunder. - The execration, how evaded by ABARBANEL, the great commentator on the Pentateuch. - His own extravagant affertions, with respect to the constellations, and his particular computation of the times of the Messiah proved to be false, by the event. - The monstrous conceptions of the modern Jews, relative to the great feast at which the second Messiah, after the overthrow of the enemies of the Jews, is to entertain the whole affembled race of Judah, from Abraham downwards, in the renovated city of Jerufalem, (according to the Rabbies cited by Basnage,) with the slesh of the semale LEVIATHAN, falted by God from the beginning of time, and preferved as an exquisite relish for that banquet of his Son. - They are also to be regaled with the female Венемотн, which eats the grafs of 1000 mountains in one day, according to Pfalm I. 10; and with the flesh of the stupendous bird Ziz, or BARIUCHNE, whose extended wings obscured the fun. - Wine made of the grapes of Paradile, and treasured in the vault of Adam, also reserved for that seast. -The Author apologizes, and gives his reasons for mentioning these rabbinical vagaries, viz. to shew their perversion of Scripture texts, and their fensual and carnal notions of what is purely spiritual; among which may be numbered, that most baleful spring of all their calamities, the persuasion that the MESSIAH IS YET TO COME, A MIGHTY TEMPORAL PRINCE.

The Author now returns to the investigation of the points remaining to be confidered in the THEOLO-Gy of the Brahmins - According to Diodorus Siculus, the ancient Brachmans acknowledged all their civil and ecclefiaftical inflitutions to be derived from Dionysius -An inquiry commenced concerning the true Indian Bacchus - The Indians, in their relations to the Greeks, to flatter their conquerors, artfully applied the adventures of their great HERO and GOD RAMA to the Grecian Dionyfius - The true Dionysius of antiquity afferted to be no other than NOAH - and, probably, the first person who led a colony to India from Armenia, after the flood, was an immediate descendant of the more virtuous line of that patriarch, who established the original, mild; and patriarchal, form of government which originally prevailed in India, and of which many traces to this day remain - The early and acknowledged maturity of the sciences in India, and other perplexing phænomena relative to that country, attempted to be accounted for, by supposing, with Mr. Bryant, that colony to have migrated, not from Shinaar, but from Ararat, previous to the erection of Babel and the confusion of tongues - The CUTHITES ejected by the vengeance of God from SHINAAR, and, defeated by the confederated fovereigns of the line of Shem, invade India in various directions - from the North by the pass of Hurdwar and from the regions on the western frontiers, called from them INDO-SCYTHIA. - The former established themselves on the Ganges, and formed that vailt Eastern

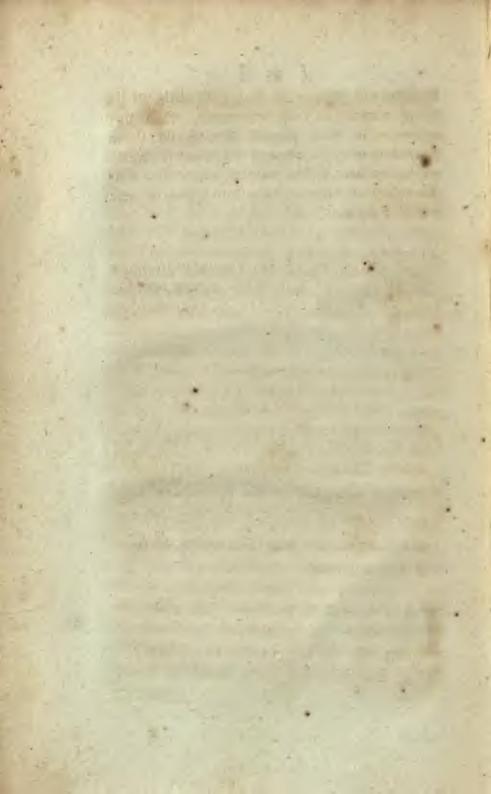

Eastern empire so celebrated in Sanscreet histories, of which the city of Own was the capital, and the Hindoo god and prophet RAMA, the fon of Cush, the first potent sovereign - the latter founded the equally renowned empire of the West, and, poffibly, the capital of that empire was either HASTINAPOOR, OF BRAHMINABAD. - The Author affigns his reasons for adopting this hypothesis, which are founded on the martial and enterprizing character of the sons or HAM - their attachment to the facred gloom of CAVERNS - and the acknowledged skill in architecture of that race, who erected the flupendous pyramids of Egypt - He urges that this hypothelis accounts for the origin of the Two GREAT SECTS of India, and their varying theology - for the veneration which the Indians entertain for cows and SERPENTS, the predominant fuperstition of Egypt - their adoration of the SOLAR ORB -their worship of the PHALLUS - and their sanguinary facrifices of MEN and BEASTS. - The Differtations of Sir William Jones, and others, on the Indians, very decifively point towards some such hypothefis as this - fince they evince, that, at fome remote period, there has been a general convultion in the civil and religious constitution of India - that a great and remarkable change has taken place in the manners and opinions of the Hindoos - and fince the mystery of the great battle of the MAHABBARAT, in which fons and brothers fell in a general and promiscuous carnage, can only be resolved by such a supposition - The true character of the venerable Brachmans

[33]

Brachmans of antiquity is finely delineated, and the fevere tortures are also enumerated, which they underwent in their progress through the Char Asherum, or four degrees of probation; tortures which they bore with a constancy and with a fortitude worthy of a more enlightened religion and more animating rewards,

END OF THE INTRODUCTORY PROSPECTUS OF THE PRINCIPAL SUBJECTS DISCUSSED IN THE DISSERTATION ON THE THEOLOGY OF HINDOSTAN.

CHAP. I.

CONCERNING THE PHYSICAL AND SYMBOLICAL THEOLOGY OF THE ANCIENT INDIANS;
IN WHAT POINTS IT RESEMBLED THAT OF
THE SCYTHIANS—THAT OF THE ANCIENT
PERSIANS—THAT OF THE ANCIENT EGYPTIANS—AND THAT OF THE EARLY
GREEKS.

SECTION I.

Pointing out the Analogy existing between the ancient Theology of India and Scythia; particularly in respect to the superstitious Rites practifed by both Nations in confecrated Groves and Caverns, and their sanguinary Sacrifices of Men and Beasts.

AM now about to enter upon a fubject, of which the MAGNITUDE and INTRI-CACY fill me with awe and apprehension. In the comprehensive view which it is my

C 2 intention intention to take of this important and difputed topic, the Indian Theology, so many
various and complicated circumstances press
for consideration, that I am almost at a loss
from what point to commence the wide survey. If a less degree of order and connection
than I could wish should appear in my reflections on this head of the RELIGIOUS PRINCIPLES, maintained from age to age by the
Hindoos, the reader will, I hope, candidly
impute the defect to the obscure, the extensive, and complex, nature of the subject under examination.

During the intercourse which the ancients maintained with India; by means of the conquests of ALEXANDER, and the commerce afterwards carried on with the nations inhabiting the Peninfula, they were able to obtain a partial infight into their theological inftitutions, which, as far as known to them, have been faithfully transmitted to posterity. in the writings of Herodotus, Diodorus Siculus, Strabo, and Pliny. Some of the outlines which they have drawn are indeed just and firiking; but the impenetrable veil, which the craft of the Indian as well as of the EGYPTIAN priesthood had thrown over the more folemn mysteries of the religion they professed.

professed, precluded any very intimate acquaintance with its principles. Of the genuine precepts and the more fublime doctrines of BRAHMA, whether confidered as a theologift or as a legislator, as they are now known to us through the GEETA and the GENTOO CODE, the ancients were as entirely ignorant as even the European conquerors of India themselves, to their disgrace, continued till the middle of the present century; when Mr. Holwell, Mr. Dow, and, in still more recent periods, Sir William Jones, Mr. Halhed, and Mr. Wilkins, made the most indefatigable and fuccessful efforts to investigate them. To the laborious refearches of thefe gentlemen is the public indebted for all the original knowledge of which they are now in possession, both in regard to the true principles of the theology of the Hindoos contained in the VEDAS,* and the profound wisdom and equity displayed in the code of their laws. The latest information, however, and that on which I shall principally depend, is by far the most authentic; for, to the allegorical fyftem which Mr. Holwell has laboured to establish, there are material objections; and no

* The four facred volumes of India, so denominated from VEDA, a SANACREET 1901, fignifying, TO KNOW.

no very great stress can be laid on any information, relative to that religion, given in the prefatory differtation of Mr. Dow, because a very able scholar in Sanscreet literature has proved the ingenious writer's palpable deficiency in the knowledge of those facred writings, from his having presented to the public, as an authentic specimen of the several VEDA'S, four ashlogues, or stanzas, which he affirms have not the least affinity or similitude whatfoever to those books. The truth of this affertion, Mr. Halhed * has placed beyond the poffibility of doubt, by a particular quotation of the first of those ashlogues, with the stanzas immediately preceding the subsequent, as they stand in a collection of Sanfcreet poems, of very ancient date indeed, but totally unconnected with the subject of religion. While, however, I am compelled thus early to point out the defects of this writer, it is but justice to add, that even Mr. Halhed himself has acknowledged, that, in other refpects, he is " an author of confiderable merit;" and calls his translation of Ferishta. er an elegant translation," What is most worthy

^{*} See Mr. Dow's prefatory Differtation to his translation of Ferishta, vol. i. p. 30, and Mr. Halhed's Preface to the Code of Gentoo Laws, p. 32, 4to edition.

worthy of our attention, in the two former of those writers, shall be first noticed; new rays of light from the pages of the latter will, as we advance, illuminate the subject. I think it necessary, however, to begin my inquiries at a period far remote from that of their immediate investigation.

The gloomy CAVERN and the confecrated GROVE bore witness to the earliest devotions of mankind, The deep shade, the solemn filence, the profound folitude, of fuch places, inspired the contemplative foul with a kind of holy horror, and cherished in it the seeds of virtue and religion. The same circumstances were found equally favourable to the propagation of fcience, and tended to impress upon the minds of the hearers the awful dictates of truth and wifdom. The BRAH-MINS of Afia and the DRUIDS of Europe were therefore constantly to be found in the recesses of the facred grotto and in the bofom of the embowering forest. Here, undisturbed, they chanted forth their devout orisons to their Creator; here they practised the severities of bodily mortification; here they taught mankind the vanity of wealth, the folly of power, and the madness of ambition. All Asia beside cannot boast such august CA

august and admirable monuments of antiquity as the caverns of SALSETTE and ELEPHANTA, and the sculptures that adorn them. I confider them, not only as stupendous subterraneous temples of the Deity, but as occasionally used by the Brahmins for inculcating the profoundest arcana of those sciences, for which they were fo widely celebrated throughout the East. What were the religious rites practifed and what the sciences taught in those caverns, I shall reserve for ample investigation under the fecond general head. In the mean time it may be observed, that, from the deep obscurity of caverns and forests, have, in every age, iffued the light of philosophy and the beams of religion. ZOROASTER, OF ZER-DUSHT, the great reformer of the feet of the Persian Magi, between whose doctrines and those of BRAHMA I shall hereafter, in many points, trace a striking resemblance, amidst the gloom of a cavern, composed his celebrated fystem of theological institutions, which filled twelve volumes, each confifting of a hundred skins of vellum, and was called the ZEND-AVESTA.* The renowned philosophers,

^{*} Dr. Pridesux, who, next to the learned Hyde, has given the most ample account of Zoroalter and his tenets, informs us,

phers, Epictetus, and Pythagoras, who was himself the scholar of Zoroaster,* sought wisdom in the solitary cell. Even the venerable prophets of the true religion took up their abode in the folitudes of the defert; and the herald of the MESSIAH, whose meat was the locusts and the wild honey which those folitudes produced, declares himself to be " the voice of one crying in the wilderness." In later ages, the crafty impostor Mohammed, in order more effectually to establish the pretended fanctity of his character, thought it necessary to shun the society of men, and retired to fabricate his daring impositions in "a lonely cave, amidst the recesses of Mount Hara."

GROVES, facred to religion and science, were famous over all the East. Abraham is said to have "planted a grove in Beershebah, and to have called there upon the name of the Lord." + But his degenerate posterity afterwards prostituted the ballowed grove to purposes of the basest devotion. They were upbraided,

that the word Zend-avessa signifies Fire-kindler. See Prideaux's Connections, vol. i. p. 317, oct. edit. 1724. See also Dr. Hyde, Hist. Vet. Relig. Pers. cap. xxvi. p. 330. Edit. Oxon. 1760.

+ Gen. xxi. verfe 23.

braided, by the prophets, with burning incense and offering oblations, under every oak and green tree, to the gods of the Phænicians and the neighbouring nations. It was against the groves, polluted by such idolatrous facrifices, that the most awful anathemas of offended heaven were, in holy writ, perpetually denounced. Amidst the ardours of a torrid clime, those sylvan solitudes could not fail to afford the most grateful retreat; but, according to the united attestations of the ancients, their inmost recesses were often polluted by the most dreadful rites. The SCYTHIANS, also, who never erected temples to the Deity, in their colder regions. celebrated the mysteries of their sanguinary fuperstition under groves of oak of astonishing extent and of the profoundest gloom. Some of those oaks, according to Keysler,* who has diligently investigated the antiquities of that northern race, and traced them among their descendants in Europe, were of a prodigious magnitude, and were always plentifully sprinkled with the blood of the expiring victims. However vast the dimensions of those oaks might have been, it is hardly possible they could have exceeded in fize that wonderful

[·] See Keyster's Antiquitates Septentrionales, Differt. 3. .

wonderful Indian tree under which we are told, by the ancients, * that four hundred horsemen might take shelter at once. This was doubtless the facred BATTA, or baniantree of the moderns, under the ample shade of whose radicating branches, Tavernier informs us, that the Hindoos of modern times delight to refide, to dress their victuals and erect their pagods. Of one of this species, growing near Surat, he has given an engraving, + with a number of FAKEERS, the gymnosophists of the ancients, in every dreadful posture of penance and distortion. The Druids of Gaul and of Mona, the immediate descendants of the ancient CELTO-SCYTHIANS, retained the fame veneration for groves of oak; and, according to the Roman hiftorians, in the early periods of that empire, practifed the same tremendous species of superstition, devoting to the gods, with many horrid ceremonies, the unhappy captives, ‡ taken

^{*} Villima feems to be derived a ville, the person conquered in battle, and therefore doomed to facrifice.

taken in war. Lucan,* describing the Massilian grove of the former, enumerates circumstances which make us shudder as we read the gloomy, damp, impenetrable, grove, where no fylvan deity ever refided, no bird ever fang, no beaft ever flumbered, no gentle zephyr ever played, nor even the lightning could rend a passage. It was a place of blood and horror, abounding with altars reeking with the gore of human victims, by which all the trunks of the lofty and eternal oaks, which composed it, were dyed of a crimson colour: a black and turbid water rolled through it in many a winding stream: no foul ever entered the forlorn abode, except the priest, who, at noon and at midnight, with paleness on his brow and tremor in his step, went thither to celebrate the horrible mysteries in honour of that terrific deity, whole afpect he dreaded more than death to behold.

That

Et lustris recubare seræ: nec ventus in illas
Incubait silvas, excussaque nubibus atris
Fulgura

Lucan's Pharfalia, lib. iii. p. 400 & feg.

That a country, like India, whose jungles, at this period of general cultivation, form in fome places an impervious barrier, and whose fages have ever affected both the aufterity and feclusion of anchorites, should once have abounded with the noblest groves, calculated for every purpose of superstition as well as instruction, is a supposition neither irrational nor incredible. Indeed many very extensive and beautiful groves * yet remain in Hindoftan, though now applied to other purpofes. Whatever may have been urged in favour of the high antiquity of BENARES, as the original feat of Hindoo literature and the most favoured residence of the Brahmins, it feems to be a fact, authenticated by the evidence of the Ayeen Akbery,+ and corroborated in some degree by the Asiatic Refearches, t that TIRHOOT, a city situated in the north of Bahar, possesses a prior claim to that honour; for, it is faid, " from old time, to have been the residence of Hindoo learning;" and those delighful groves of orangetrees mentioned before, which extended no less

In the SACONTALA, an ancient Indian drama, the Brahmins are represented as reliding in the bosom of a deep forest.

⁺ Ayeen Akbery, vol. ii. p. 32-

¹ Afiatic Researches, vol. i. p. 163.

less than thirty cose, might well contribute to render it the Athens of Hindostan. It will be remembered, that Birmh-Gaya, a place of worship, so called from being consecrated to Brahma, is in that fubah, and that Mr. Chambers, quoting Ferishta, says, that the province of Bahar was thus denominated, " because it was formerly so full of Brahmins, as to be, as it were, one great feminary of learning," as the word imports. NAUGRACUT, fituated on the range of mountains of the fame name, in the north of Lahore, is also mentioned, by ancient travellers, as having a celebrated college of Hindoo learning, groves of vast extent, and a most frequented and splendid chapel of Hindoo devotion, the very floor of which, according to Mandelfloe,* was covered with plates of gold. The rites, however, were fomewhat of a fanguinary kind; for, to gain the smile of MATTA, the monstrous idol adored there, the infatuated devotees cut out their tongues, which, according to Abul Fazil,+ miraculously grew again in the space of two or three days.

It has, indeed, been afferted, and the affertion is supported by the evidence of tra-

dition,

Mandelfloe apud Harris, vol. ii. p. 120.

⁺ Ayeen Akbery, vol. ii. p. 133.

dition, that the very early inhabitants of India were neither fo gentle in their manners nor fo guiltless in their oblations as are the modern. but that they delighted in the effution of facrificial blood as much as their progeny abhor and avoid it. It has been afferted, that not. only BESTIAL but even HUMAN facrifices were common among them, and that the vestiges of this fanguinary superstition are still evident in frequent instances of voluntary suicide, and particularly in the inhuman practice, fo common throughout India, of women burning themselves with their deceased husbands; a practice, which is still encouraged by the Brahmins, and which all the authority of Mohammedan and European governors cannot effectually check. The truth of this affertion is, indeed, too well authenticated both by ancient and modern writers; and, though Mr. Holwell,* arguing from the general mildness of the Hindoo character, and the benevolent principles of the Brahmin religion, strenuously denies the existence of those bloody rites, yet, unaccountable as it may appear, the VEDAS+ themselves enjoin the oblation, on some occafions, of a MAN, a BULL, and a HORSE, under the

[·] Holwell, part ii. p. 84.

⁺ Aliat. Research. vol. i. p. 265.

the names of Neramedha, Gomedha, and ASWAMEDHA. In the Ayeen Akbery,* it is expressly said, that, at a particular period, on account of the number of animals which were at that time facrificed in Juggen, (divine worship,) "the Almighty appeared upon earth under a human form, to convince mankind of the wickedness of that custom, and that he lived a hundred years." Strabo, + indeed, and Arrian, I unite in affirming, that facrifices of animals were anciently practifed in India, and fpecify both the bull and the horse, which were obliged to be coal-black, as being of a more rare and valuable kind. The former adds, that the throats of the victims were not cut, for fear of rendering the facrifice imperfect, by spilling the blood of the animal, but that they were strangled. This mode of depriving the animal of life, if we are at all to credit the account, was more probably adopted to avoid the defilement of that blood, but I can by no means find this particular confirmed either in the Asiatic Researches, which expressly fay these ceremonies were stained with blood, nor in that part of the Ayeen Akbery, which records

[.] Ayeen Akbery, vol. iii. p. 241.

⁺ Strabo, lib. xv. p. 710.

^{. 1} Arrian in Indicis,

records the history of the facrificial rites of India. The latter book mentions, in opposition to what Strabo afferts concerning the coal-black steed, that the Aswamedha Jug, or horse-facrifice, was only properly performed when the animal was white, with a black right ear; which, however, being an object equally rare, will serve to prove the validity of that valuable author's general information.

However incredible to some persons may appear the affertion of the most sanguinary rites having been at one time generally practifed in Hindostan, the existence of such rites is rendered exceedingly probable by the following fhort chapter in the Ayeen Akbery, which Abul Fazil, who had the best opportunities of investigating the fact, would not have inferted unless founded in truth. It is entitled, * MERITORIOUS Kinds of SUICIDE, There are five in number, for the choice of the voluntary victim. " 1. Starving. 2. Covering himfelf with cow-dung; fetting it on fire, and confuming himfelf therein. 3. Burying himself with snow. (This practice must have been peculiar to the northern regions.) 4. At the extremity of Bengal, where the Ganges discharges itself into the sea through a thousand VOL. II.

^{*} Ayeen Akbery, vol. iii. p. 274-

thousand channels, he goes into the water, enumerates his fins, and prays till the alligators come and devour him. 5. Cutting his throat at Allahabad, at the confluence of the Ganges and the Jumna." The legislator, who could denominate these horrid acts of selfmurder meritorious, could not be of a very mild or benevolent disposition, but, on the contrary, must have been a gloomy bigot or blood-thirfty tyrant. The facrifice which Ca-LANUS made of himself, on the funeral pile, before the whole affembled army of Alexander; the fimilar devotion of himfelf to the flames. at Athens, of the venerable Brachman ZAR-MANOCHAGAS, who attended the embasily fent by Porus to Augustus, and whose epitaph, dictated by himfelf, expressly afferted, that he relinquished life in conformity to a custom prevailing among his countrymen; that, mentioned in a former chapter, of the unsuccessful but warlike fovereign of Lahore; and the authenticated narratives, in times comparatively modern, of the facrifice or inhumation, together with the corpfe of the monarch, of the principal flaves and most beloved women* of

^{*} Mention is made in Harris's Voyages (vol. i. p. 282) of the death of a king at Tanjore, at whose funeral no less than three hundred of his concubines at once leaped into the sames. Texeira,

the fovereigns of the Peninfula: these collective confiderations incontestably prove how much accustomed the Indians formerly were to the rites of human facrifices, and in how late periods they continued to practife that enormity, either constrained in regard to others, or voluntary in respect to themselves. The dreadful rite, as a public national facrifice, ceased, we are told, when the ninth great incarnation of VEESHNU, in the form of the god Boodh, above-mentioned, took place, about 1000 years before Christ, when that benign and compassionate deity abolished the disgraceful custom, and ordained, in its place, the more simple and innocent oblation of fruits, flowers, and incense.

I am inclined to believe, that both this practice and the barbarous custom, of devoting to death the affectionate wife on the funeral pile of her deceased husband, (doctrines so opposite to the general precepts of Brahma, which cherished in the bosom of his votaries the most enlarged benevolence, and extended that benevolence even to brutes,) derived its origin.

in page 9, of his Persian History, declares, that, when he was in India, "four hundred women burned themselves at the funeral of the Naique of Madura."

^{*} Afiat, Refearch, vol. i. p. 265.

origin, in part, from fome early but forgotten connection with the neighbouring ferocious and war-trained tribes of SCYTHIA. I have ventured to differ from Major Rennel, in deriving the national appellation of Cathæi, which the Greeks, doubtless from some resembling sound heard by them, gave to the most warlike people of northern India, from Kathay, or, if written Cuthæi, from Scuthe, or Scythe; whereas that gentleman, finding the name written Katheri in Diodorus Siculus, with perhaps greater propriety, would understand by them the Kattry, or Raja-pout tribe, and quotes a paffage from Thevenot in corroboration of the idea. However, his own conjecture, that the tribe of Nomurdy, inhabiting the banks of the Indus, may probably be the descendants of the Scythian Nomades, and a relation which I find in Abulgazi's History * of the Tartars, concerning a very ancient conquest of the northern regions of Hindostan by Ogus KHAN, one of their most early emperors, an account of which will be hereafter given in its proper place, induces me still, with every proper diffidence, to adhere to that opinion. But there anciently existed a race of people, who bordered still nearer to the northern frontiers

of India, and whose manners and habits, Herodotus* acquaints us, greatly refembled those of the Scythians, I mean the MASSAGE-T.E., inhabiting, according to Sir W. Jones,+ the territory by the moderns called BADAK-SHAN, from whose primitive practices, however now altogether relinquished, the Indians might have borrowed their less humane principles and cuftoms. I confider the GETES, upon whom Timur is faid to have made war, as the direct descendants of this ancient tribe. and am induced to do fo by Sheriffedin's defcription of them, as a warlike race of mountaineers. Thefe GETES, Major Rennel, § if I mistake not his meaning, supposes to be the fame people with the modern Jaurs, who, at this day, make fo conspicuous a figure in Hindostan. It is not from attachment to fystem, but from a wish to vindicate the mild and benevolent progeny of Hindostan from the inconfistency of a conduct so entirely repugnant to their genius, and to the general fentiments and practice at this day prevailing throughout Da

throughout the country, except among the war-tribe only, that I have fo far pressed this argument, in the hope of inducing a perfuafion that fo nefarious a practice might possibly not have originated among them, but was a dreadful exotic, imported during their connection with their neighbours of the more barbarous north. The fanguinary usage might have been univerfally adopted only in times prior to the inflitution of their first great legislator, whosoever, in reality, that legislator might have been. If, however, we allow, what, after all, I fear must be allowed, that it was prescribed by MENU himself; to avoid abfurdity, we must suppose, that, to prevent too violent a shock being given to religious prejudices fo deeply rooted, or not venturing to run the risk of abolishing at once a custom so generally practifed, he permitted it only on fome particular emergencies; but, in general, and probably with a view to remove for ever the baneful impression from their minds, throughout his whole voluminous code,* inculcated the most beneficent affection to their fellow-creatures; and, to prevent the effusion

The four Venes together compose eleven solio volumes, which are now in the possession of Colonel Police, who was for many years resident at the court of Delhi.

effusion of bestial blood, which we know was fo prodigally shed by the most ancient nations, established the humane but fanciful, and since corrupted, doctrine of the Metempsychofis.

The SCYTHIANS, however, were not their only neighbours who were, in a notorious degree, guilty of the enormity of human facrifices. If Herodotus may be credited, (and, concerning these remote periods of the world, even Heredotus, the most respectable historian of antiquity, or rather the venerable father of all history, may be fometimes fallible,) the ancient Persians* facrificed human victims; and, in particular, he informs us, that, in the expedition of Xerxes into Greece, arriving at a place in the country of the Edonians, called the Nine Ways, the Magi took nine of the fons and daughters of the inhabia tants, and buried them alive; + for, he adds, to these rites of inhumation the Persians are accustomed. To corroborate the truth of a circumstance, which he suspected might not be credited by his readers, he, in the very next fentence, acquaints us, he had heard, that, when Amestris, wife of Xerxes, had happily attained to mature age, with confirmed health, D 4 fhe

[·] Herodoti, lih. vii. p. 477, edit. Steph.

⁺ Zimtas katujesus.

the ordered fourteen children of the noblest families of Persia to be buried alive, in grateful facrifice to the subterraneous deity. This practice, however, was equally contrary to the precepts of Zoroaster as to the general tenor of the VEDAS. How shall we account for its introduction into those nations, or indeed of fo horrid a rite into any nation? For, in fact, all the most ancient nations of the earth practifed it; the Phænicians, the Chaldwans, the Egyptians, and, it is too probable, the Jews themfelves, who were forbidden, by the most dreadful penalties, to cause their sons and their daughters, like the Chaldwans, to pais through the fire to Moloch, the Phænician deity. The abomination descended from Cain, the first murderer, to all his posterity; and we must consider the command of Jehovah to Abraham, first to sacrifice his only son, and then, by the voice of an angel from heaven, ordering him to forbear and to facrifice a RAM in his place, as a strong decisive mark of his disapprobation, and as an express prohibition of the continuance among men of so nesarious and detestable a practice.

The

Plutarch confirms the same fact; but, instead of fourteen, fays Ameliris offered up the hallowed number of nine victims to Pluto,

The Aswamedha Jug, or horse-facrifice, the Indians, doubtless, derived from the Perfians, among whom, according to the whole stream of classic antiquity, the borfe was in a peculiar manner facred to the fun. In their pompous facrifices to that deity, a radiant car, glittering with gold and diamonds, and drawn by white borfes, in imitation of those ætherial courfers, which they imagined rapidly conveyed the orb of day in its progress through the expanse of heaven, constantly formed a part of the procession. It was preceded by a train of led horses, sumptuously arrayed, and of uncommon beauty and magnitude, who were the destined victims of that splendid superstition. The Maffagetæ, too, that warlike race, who, according to Strabo,* opposed the arms of the great Cyrus, adored the sun, and facrificed horses to that deity. Horses, however, were not only facrificed to the fun in the ancient æras of the Perfian empire; for, the Perfians (who, according to the more authentic reprefentation of Dr. Hyde, venerated all the elements of nature) paid likewise a religious homage to water: and Herodotus, in the page cited before, fays, that, on the arrival of the

[.] Strabo, lib. xi. p. 487, edit. Basil. The edition referred to throughout.

army at the Strymon, the Magi facrificed nine white borfes to that river, into which they threw them, with a quantity of rich aromatics. I may in this place remark, that, as there feems to be the most folid ground for supposing that the Indians owe to their early connection with Persia their profound reverence for fire, so it is not improbable that their veneration for great rivers, as, for instance, the Ganges and the Kistnah,* whose streams they account facred, may be derived from the same fruitful source. I was not able to oblige my readers with any very particular account of the Neramedha, or human facrifice, as anciently practifed in India; (though I shall hereafter give an instance of one from the HEETOPADES;) but, on that at prefent under confideration, some rays of light have been thrown in a translation by Mr. Halhed from an old Persian author, who published in that language a Hindoo commentary upon the Vedas, in which this rite, as a symbol, is explained. The whole account is wild and romantic in the extreme, and Mr. Halhed does not absolutely vouch for its authenticity; however.

I particularly mention these rivers, because two of the most considerable; but the Ayeen Alchery, vol. iii. p. 254, enumerates so less than twenty-eight rivers, which are held sacred by the Hindoos.

however, till more genuine fources of information are opened to us, we must make the most of those in our possession. The Aswamedha Jug, we are told in that book, does not merely confift in bringing a horse and facrificing him, but the rite is also to be taken in a mystic fignification. " The horse, so sacrificed, is in the place of the facrificer, bears his fins with him into the wilderness into which he is turned adrift, (for, from this particular instance, it feems that the facrificing-knife was not always employed,) and becomes the expiatory victim of those fins." Mr. Halhed observes, that this ceremony reminds us of the scape-goat of the children of Ifrael; and, indeed, it is not the only one in which a particular co-incidence between the Hindoo and Mosaic systems of theology may be traced.

The Ayeen Akbery informs us that the Aswamedha Jug is performed only by great monarchs previous to their entering upon a war; that he then carries victory wherever he goes; and that whosoever has performed this ceremony a hundred times will become a monarch in the upper regions. Mr. Wilkins, tommenting upon a passage, allusive to this

facrifice,

[.] See the Preface to the Code of Gentoo Laws, p. 9.

⁺ Advert to notes on the HERTOFADES, P. 331.

facrifice, in the HEETOPADES, differs from Abul Fazil; for, he fays, that the facrifice of the horse was, in ancient times, performed by a king at the conclusion of a great war in which he had been victorious.

The GOMEDHA Jug, or facrifice of the bull, they might probably derive from the same quarter; fince we are told by Xenophon, that the bull in Persia was likewise sacred to the fun. This species of sacrifice, however, cannot be eafily reconciled with their present enthufialtic and general attachment to that class of animals; fo general and fo enthufiaftic, that, throughout India, to kill one of these sacred animals, is a crime that can only be expiated by the instant death of the offender. There is a beautiful engraving taken from an ancient sculpture in marble, and inserted in the curious and valuable collection of Montfaucon,* which is fo highly illustrative of the Gomedha facrifice, that I cannot refrain from prefenting the reader with a short description of a part of it, as well as of another or two, in Dr. Hyde's very learned work on the Religion of the Ancient

See Montfaucon, l'Antiquité expliquée, tome i. p. 373, edit. Paris, 1719. See also a similar sculpture, engraved in Dr. Hyde's first plate, with other curious astronomical appendages, which will be noticed hereafter.

cient Persians, which will still more immediately elucidate the prefent obscure subject. The reader, who may not have read Dr. Hyde's book, nor be acquainted with the profound and stupendous mysteries of the ancient worship of MITHRA, concerning which I shall have occasion to treat so largely hereafter, will, perhaps, be aftonished to hear that the Perfians, who were of all nations the most addicted to this species of superstition, chose to perform their adorations to that deity in deep caverns and gloomy recesses. The deeper those caverns, the more gloomy those recesses, to a fublimer point of elevation mounted the zeal of their devotion, and more fervently glowed the never-dying flame of the facrifice. One reason for adopting a conduct, so apparently incongruous, seems to be, that all the mysteries of religion, celebrated in the ancient world, were performed, as I have expressed myself in another part of this Differtation, so σκοτω και νυκτι, in the bosom of darkness and in the dead filence of the night. Another reason for performing this worship in caves is given by Lactantius, who, after affirming that the Persians were the first people who worfhipped the fun in dens and caves, adds, that they did so to denote the ecliples of that luminary. Around

Around these caverns, as will be more extenfively explained hereafter, when I come to defcribe the mysterious rites, probably celebrated in Salsette and Elephanta, were arranged various fymbols of the sun and planetary train, with fculptures of the animals that composed the figns of the zodiac, engraved on the lofty walls, and decorating the emboffed roof. In this artificial planisphere conspicuously was portrayed the constellation of TAURUS, or the bull, and the bas-relief, of which the abovementioned antiquary has given an engraving, represents a person in the full vigour of youth, adorned with a kind of tiara, fuch as were worn by the Mithratic priests in the facrifices, and with a loofe tunic floating in the air, preffing to the ground with his knee a struggling BULL, extended beneath him, and, while he holds him muzzled with the left hand, with his right he is in the act of plunging a dagger into his throat. But why, exclaims the Abbé Banier,* whom Warburton (for once just to merit) calls the best interpreter of the mythology of the ancients, why is MITHRA, under the figure of an active robust young man, represented in the attitude of slaying a BULL, as he appears on all the monuments of the ancients?

^{*} See Banier's Mythology, vol. ii. p. 104.

ancients? In the Abbe's opinion it is a forcible figurative emblem of the renovated warmth and vigour of the sun, who, having passed without heat and ftrength the cold wintry figns, when the fpring approaches, and he enters into TAURUS, one of the vernal figns, fhines forth in a highly increased degree of ftrength and fplendor, shadowed out under the emblem of cutting the throat of the BULL, one of the strongest and fiercest of animals. The Abbé contends, * that this fymbolical sculpture is not a representation of a sacrifice to the sun, but only intended as an image of his power in that fign. As, however, in nearly all the bas-reliefs relative to this worship, a fimilar figure of a young man cutting the throat of a BULL invariably occurs, it most probably is allufive to that facrifice: or, shall we fay, that what the Perfians beheld thus strikingly portrayed upon the most ancient zodiac in hieroglyphic characters, invented probably by the fathers of mankind to represent the power and influence of the sun in TAURUS, was, in succeeding ages, realized by servile and infatuated superstition, and the flaughtered bull was thenceforth esteemed a grateful sacrifice

to the sun, when they hailed his return to the vernal constellations, and invoked.

PERSEI fub rupibus ANTRI,
Indignata fequi torquentem cornua MITHRAM.*

The general meaning of Statius, with the reader's permission, I shall venture to give in the following paraphrase.

In Persia's hallow'd caves, the Lord of DAY
Pours through the central gloom his servid ray;
High wrought in burnish'd gold the zodiac shines,
And MITHRA toils through all the blazing signs.
See, rising pale from winter's drear domain,
The radiant youth resumes his vernal reign:
With sinewy arm reluctant TAURUS tames,
Beams with new grace, and darts severer stames.

Although I profess to give the description only of the principal figure in this sculpture, yet it ought by no means to be omitted, that, on the right side of this monument, stand two youths, with similar habits and tiaras, holding each a torch; the one raised aloft and blazing in full splendor; the other, with the lighted end directed downwards to the earth, and faintly glimmering. These expressive figures, as seems to be universally agreed among antiquaries, represent, the former the rising, the

latter the fetting, SUN; though, fince it was the object of the sculptor to portray Mithra in his full splendor only, I should conceive they were rather intended for symbols of the morning and the evening star.

There is another forcible reason that inclines me to think this action of cutting the throat of the bull allufive to a real facrifice, which is, that, in one of the other bas-reliefs, I mean that of the VILLA-BORGHESA, (and all of these antique sculptures, dug up in Italy, are, doubtless, only imitations of those found in Persia and Media by the Romans, who originally introduced into Italy the mysterious rites of Mithra,) upon the thigh of the flaughtered animal there is this infeription, SOLI DEO INVICTO MITHRÆ; which feems indisputably to allude to the circumstance of the oblation. As to the other infcription, NAMA SABASIO, which appears upon the neck of the animal, just above the part into which the dagger is plunged, and which, the Abbé fays, has perplexed all the antiquaries; the meaning will appear very evident, when we confider that NAMA may possibly be an appellative, and that saba means the bost of beaven.

In the celebrated work of Hyde there are two other plates, peculiarly illustrative of the Vol. II. E rites rites and fymbols of the Mithratic religion. The former, facing page 111, exhibits, in as many different compartments, no less than four firiking emblematical portraits of Mithra, and the bull facred to him; but the one, which I wish particularly to point out to the reader's notice, is that in which an elevated figure, decorated with a high tiara, stands erect upon the fame animal, with one foot placed upon his head and the other centred upon his back: his right hand grasps a dugger, his left supports a globe.* These symbols difplay, at once, the power of the God, and the extent of that power. The polition of his feet on the head and back of the bull, and the perpetual recurrence of that animal itself in the attitude of proftration upon all these basreliefs, plainly manifest, that the bull was not less than the horse facred to the sun in Persia, and from what fource the Gomedha lug of India, in all probability, originated. On either fide of this figure, likewife, are feen the youths with their torches, who represent the morning and the evening flar, but with this difference, that, whereas both are in the former table standing, in the latter table, the figure with the

Vide Hyde, de Religione veterum Perfarum, p. 111 and 113,
 odit. Oxon, 1760, ubi ctiam fupra.

the uplifted flaming torch is alone in a flanding posture, while the figure, with the torch just ready to be extinguished, is beautifully represented fitting in a melancholy attitude, as if overwhelmed with anguish for the loss of his expiring light, and that the world was going to be wrapped in nocturnal clouds and incumbent darkness. In the fecond plate of the fame book, there is an engraving of Taurus gestans Solem, that is, of the sun rifing on the back of the BULL, which, Hyde informs us, is a device very common on the coins of the MOGUL EMPE-RORS OF INDIA. The reader will perhaps be pleased to see his words at length : Sic nempe pinguntur figna: adeo ut in dieto iconifino exbibeatur sol in figno TAURI, Perfarum more defignatus. Sic etiam in nummis MAGNI MOGUL IMPERATORIS INDIE, exhibitur corpus folare fuper dorfo tauri, aut leonis, qui illud codum modo gestat. Nam sol videtur portari et circumduci super 12 zodiacalia symbola, dum singula dodecatemoria percurrit.

But, to return to the subject of the ancient sanguinary sacrifices in India, of which, however unaccountable, this of the bull was one, though in the present age forbidden.

They constitute a feature of national character

rader so directly opposite to that of the modern Indians, who, according to Mr. Orme, the truest delineator of that character, shudder at the very fight of blood, who are totally ignorant of one great branch of medical science, because anatomical diffections are repugnant to their religion, and who, in the opinion of the same writer, are at this day the most pusillanimous and enervated inhabitants of the globe; * that on this review it is impossible to refrain from a high degree of astonishment; and, fince the subject is equally curious and profound, it is my intention not to pass it slightly over, but to give it a difcustion in some degree proportionate to its importance. The object then of our inquiry is, of what nature and origin were the vindictive deities, whose implacable fury exacted, from the benignant Hindoo, rites from which his nature feems to have been fo abhorrent? Let us explore the latent fources of this wonderful and complicated superstition.

From the earliest periods of time, among all idolatrous nations of antiquity, a constant and uniform belief prevailed of the agency of intellectual beings in the government of the world. They supposed the whole compass

of creation to be animated with those imaginary beings, affigning to fome an elevated station in the celestial orbs; to others a refidence in the elements of nature; while others again had more particularly in charge the management of this terrestrial globe, and superintended the concerns of mortals. But as they imagined there were good spirits, or avabodamers, whose office was of this protecting and benevolent kind, fo they also believed in the existence of beings of a very contrary nature and disposition, or xaxodanuoves, whose constant employment and whose infernal delight it was to derange the beautiful order and harmony of nature, and to spread desolation through the works of God. I say the works of God; because there hardly ever existed a nation, notwithstanding the reprefentation of Sanchoniatho, and other writers of that class, who did not believe in one grand original prefiding Deity, but whom they supposed to be infinitely removed from the material universe which he had formed, and to govern that universe by celestial agents, The Indians, in particular, are to this day of opinion that the supreme felicity of the Deity confifts in a state of divine absorption in the contemplation of his own wonder-

ful

ful perfections; but still they imagine that his fpirit intimately pervades every part of the creation. These good and evil Genii, or, as they are called in the language of Hindostan, the Deos, or DEWTAHS, are represented as eternally contending together; and the inceffant conflicts, that existed between them, filled creation with uproar, and all its subordinate classes with dismay. The ancient Persians, according to Dr. Hyde,* affirmed, that there were two mighty predominant principles in nature; the first they denominated ORMUZD, or OROMASDES, the fuperior and benevolent being; the fecond they styled AHRIMAN, or the inferior and malignant being. MITHRA feems to have been the middle and mediatorial character, the oftenfible agent of the eternal beneficence, and, in the ORACLES OF ZOROASTER, is called THE SECOND MIND. Oromafdes is represented as reigning from all eternity; Mithra is described as a being formed of a nature and with powers only not INFINITE; Ahriman existed by sufferance only from the SUPREME, during that period, and for those purposes which his mind had resolved on. While the good spirits, appointed by Oromasdes.

^{*} Hist. Relig. vet. Perf. c. ix. p. 160, edit. Oxon. 1760.

masdes, under the direction of MITHRA, to superintend the affairs of the universe, were employed in acts of perpetual kindness and guardian love to mankind, the agents of Ahriman endeavoured, by every possible means, to thwart their benign intentions, and plotted the most baneful schemes for their molestation and ruin. Correspondent to the vast powers which they possessed were the tremendous conflicts in which they engaged. All nature was convulsed by the violence and continuance of those conflicts, and the terrified human race refigned themselves to the impulies of that fuperstitious dread and horror, with which they were overwhelmed.

If the Persian and the Hindoo legislator were not in reality the same person, which I strongly suspect they were, under two distinct appellations, it must be owned that the principles of their theology are wonderfully similar. Brahme, the great one, is the supreme eternal uncreated God of the Hindoos. Brahma, the first created being, by whom he made and governs the world, is the prince of the beneficent spirits. He is assisted by Veeshnu, the great preserver of men, who has nine several times appeared

peared upon earth, and under a human form, for the most amiable and beneficent purposes. Veeshnu is often called CREESHNA, the Indian Apollo, and in character greatly resembles the MITHRA of Persia; the prince of the benevolent Dewtah has a fecond coadjutor in MAHADEO, or the DESTROYING POWER OF GOD; and these three celestial beings, or, to speak more correctly, this threefold divinity, armed with the terrors of Almighty power, pursue, throughout the extent of creation, the rebellious Dewtahs, headed by MAHASOOR,* the GREAT MALIG-NANT SPIRIT who feduced them, and dart upon their flying bands the AGNYASTRA,+ or fiery shafts of divine vengeance.

The policy of legislators and the defpotism of princes have never obtained a surer hold of the mind of man, or secured his obedience more firmly, than when they have employed for that purpose the setters of superstition. To minds, so deeply impressed with an idea of the agency of invisible

[•] Mr. Holwell, whom I, in part, follow here, writes this word Mossason; but I have taken the liberty to after it, according to Mr. Wilkins's orthography in the Geeta, to Manasoon, that is, the great Afoor, or evil spirit.

[†] Akatic Researches, vol. i. p. 264.

visible beings as were those of the Persians and the Indians, few legal terrors were wanted to enforce the most abject submission to the mandates of their governors. Hence the rigid adherence of the PERSEES, that exiled and perfecuted feet, to their ancient rites, and hence that inviolable fidelity to their tenets which distinguishes the undeviating Indians. On this account it was, that Darius Hystaspes fo ardently espoused the cause and principles of Zoroaster, that at his death he ordered himself to be enrolled the Archimagus, or chief of the magi; and from this cause, probably, it has arisen that the rajahs of India have ever submitted, without a murmur, to the assumed consequence and arrogated superiority of the priests of BRAHMA.

The more timid Indian multiplied, without number, the gods of his disturbed imagination. The lightning that blasted the grove or shivered the cavern in which he performed his devotion, the furious tempest that battered to pieces his cany habitation, and, at the period of the Monsoons, ravaged the shores of the Peninsula, appeared to him as if directed by the invisible hand of some enraged dæmon. If the fields, scorched by the beam of a direct sun, and sterile from a defect

defect in the annual inundations, denied their accustomed produce of rice, his innocent and only food; if the TANK, that abundant fource of health and felicity, which rolled through his garden a thousand fertilizing streams, and which was fo necessary to himfelf in the performance of a thousand pious ablutions, denied the necessary tribute of its water; FAMINE was, by his fears, magnified into a dæmon of haggard look and gigantic form, and the affrighted bigot reforted to what he supposed to be the furest means of propitiation. On these emergencies, whether of national diffress or of domestic calamity, he haftened, like the Persian, to that SACRED FIRE, which he, with equal zeal, preserved from extinction; he performed, with trembling, the various prescribed ceremonies of the Poora; * and, while his heart glowed with gratitude for favours received from the protecting Dewtah, he neglected not to deprecate the vengeance of the malignant dæmon by oblations fuited to the ferocity of his character. Agonizing under the torments of superstitious terror, his blood stagnant with holy horror at the recollection

of

^{*} Pooja fignifies avership: fee the various kinds of Pooja described in the Ayeen Akbery, vol.iii. p. 226.

of the past or the dread of the future, he thought no offering too costly, no victim too precious. As the stern injunction of the Deity was explained by the barbarous prieft, the child of his affection or the wife of his bosom alternately expired on altars reeking with human facrifice. Hence, in the Sa-CONTALA,* the epithet of blood-thirfly is frequently applied to the evil dæmon. If the offender happened to be of elevated rank or of distinguished fortune, the penalty of life was fometimes remitted, and the Brahmin pronounced that the divinity might be appealed by a less barbarous oblation. In that case, the half of his possessions was brought to the foot of the altar, and the treasures, thus extorted, were devoted to swell the immense revenues of the temple, and to gratify the infatiable avarice of the priest. It is affirmed, in the HERTOPADES,+ that, " without the Brahmins rites, a facrifice is smitten;" that is, with a curfe.

Proportionate to the boon which he wished to obtain, or to the evil which he laboured to avert, was the largess the facrificer bestowed. No less than fixteen various kinds of sacrifice, all of gold and precious stones, each rising

^{*} Sacontala, pages 82 & 83. + Heetopades, p. 11.

rifing above the other in value, are enumerated in the Ayeen Akbery.* Some of the articles thus enumerated are exceedingly curious, and among them are " the amount of the facrificer's own weight, against gold, filver, &c. golden horfes, golden cows, trees and vines of gold, ploughs of gold, chariots drawn by horses and elephants, all of gold." The value of these offerings varies from 10 to 6660 tolahs. The tolah, we are informed by Tavernier, + a merchant in gold and jewels, is a weight peculiarly appropriated, throughout the Mogul empire, to those precious commodities, and, according to that author, a hundred tolahs amount to thirtyeight ounces. These were probably, in time, fubstituted in the place of fanguinary oblations, and, from their vast amount, feem to carry evident proof that India was formerly much more abundant in wealth than in periods less recent. Indeed the historians of Mahmud Gaznavi strongly countenance this idea, fince they are quite extravagant in their account of the wealth found by him in that country. One of them, quoted by Mr. Orme, + afferts that he found a tree growing out

^{*} Ayeen Akbery, vol. iii. p. 229. † Indian Travels, lib. i. c. z. ; Orme's Indonan, vol. i. p. 9, first edition.

out of the earth to an enormous fize, of which the fubstance was pure gold, and this the effect of nature: thus realizing Milton's fable * of "ambrofial fruits and vegetable gold." Their offerings of a less splendid and oftentatious kind are innumerable; confifting, for the most part, of rice, flowers, fruits, fweet-meats, cufa-grafs, cow's milk, and clarified butter. In the Sacontala + Eendra is more than once denominated " the god with a hundred facrifices."

I have both heard and read fo many attempts to confute and even to ridicule the affertion here made, that the altars of India. were once STAINED WITH HUMAN BLOOD, that I could wish to place the disputed subject beyond the possibility of future controversy. No fact can be more certainly demonstrated, if we allow the two best Sanscreet scholars of Europe, Sir W. Jones and Mr. Wilkins, to be adequate authorities for determining the question. The name of the black goddefs, to whom these human sacrifices were offered, was NAREDA, or CALLEE, who is exhibited, in the Indian temples facred to her worship, with a collar, not composed, like that of the benign deities, of a splendid affemblage

affemblage of the richest gems, but of GOLDEN SKULLS, descriptive of the dreadful rites in which she took so gloomy a delight. "To her," fays Sir W. Jones, "human facrifices were anciently offered as the VEDAS enjoined, but, in the present age, they are absolutely prohibited, as are also the facrifices of bulls and horses." This observation is accompanied with an engraving of Nareda, in the Afiatic Refearches,* fufficiently favage and picturefque. Both the text of the Heetopades, + and Mr. Wilkins's explanatory notes, decidedly corroborate this affertion. " That most beautiful if not most ancient collection of apologues in the world" records, under the veil of a fable, an instance of a father's facrificing his fon, to avert a dreadful calamity with which the kingdom of India was threatened by the intended flight of its guardian genius. The cruel goddefs had informed him, that the offering up of that fon, to the Power who prefides over nature, should secure the prosperity of the reigning king and the falvation of the empire. The father relates to his fon the dreadful tidings, who cheerfully confents to be facrificed

^{*} Aliat. Research. vol. i. p. 265.

[†] Heetopedes, p. 212, and note 292.

facrificed for the prefervation of a great kingdom and its monarch. They approach the altar, and, when they have worshipped the image, " O goddess I" exclaims the facrificer, " let Soobhraka, our sovereign, be prosperous! and let this victim be accepted!" Saying this, he cut off his fon's head. The goddess, to whom this offering was made, we are informed by Mr. Wilkins, " was Callee, (a name derived from Cala, Time,) and it was to her that human facrifices were wont to be offered to avert any threatened evil." In another fable, + a female observes: " My husband, if he chooses, can fell me to the gods, or give me to the Brahmins," which the translator interprets, as referring to the " Naramedha, or human facrifice, not uncommon in the earlier ages." This angry deity is now propitiated by a facrifice of kids and young buffaloes; fo that at this day the vestige of blood remains.

It has been before remarked, that Mr. Holwell strenuously denies the existence of these bloody rites in India: whereas, in fact, his whole relation, in regard to this sable personage, tends in the strongest manner to establish our belief of the general prevalence

of

^{*} Hectopades, p. 212, and note 292. + Ibid. p. 185, note 249.

of this dreadful superstition throughout that country in very remote æras. He tells us, that an ancient pagoda, dedicated to this terrible divinity, stands about three miles fouth of Calcutta, close to a small brook, which the Brahmins believe to have been the original course of the Ganges; that, from her name of Callee, the place itself is called Callee Ghat; that her fast falls on the last day of the moon in September, and that fhe is worshipped all the night of that day universally; but more particularly at Callee Ghat abovementioned; that different parts of this Gentoo goddels are adored in different places of Hindostan, her eyes at Callee Ghat, her head at Benares, her hand at Bindoobund, &c. that the takes her name from her usual habiliment, which is black, and is frequently called the BLACK GODDESS, Callee being the common name for ink.* On this fast also, he observes, worship and offerings are paid to the manes of deceased ancestors. The origin of this fingular deity is perfectly in unifon with her life and history. Arrayed in complete armour, the sprang from the eye of the dreadful war-bred goddess Durga, the vanquisher

See Holwell, part ii. p. 131, and the engraving of Callec, which cannot fall of exciting difguil and horner in the reader.

vanquisher of dæmons and giants at the very instant that she was finking under their united affault; when Callee, joining her extraordinary powers to those of her parent, they renew the combat, and rout their foes with great and undistinguished flaughter. I cannot refrain from adding in this place, in corroboration of a former remark, that, according to Herodotus, the principal and favourite deity of the Scythians was a wardivinity, to whom that historian gives the appellation of Mars. To this deity they erected, in every precinct, a vast quadrangular altar, fo vast as to cover three stades of land, confifting of an immense pile of wood collected into bundles; and, upon the top of this altar, they placed a rufty feimitar of iron, deeply crimfoned with the blood of the victims, as an emblem of their favage divinity and of their no less savage rites.* Callee, we fee, was born in battle, and from her birth inured to scenes of carnage and death; and it is deserving of notice that the youth, faid to have been facrificed by his father in the fable of the Heetopades just cited, was of the Katteri, or war-tribe, and makes use of this remarkable expression, VOL. II.

[.] Herodoti, lib. iv. p. 276.

"that it was a faying which particularly belonged to that tribe, that, on some distinguished occasions, human facrifices were

proper."

The ancients indeed feldom facrificed men. except at some grand and awful criss, when a nation was convulsed by the violence of earthquakes, or desolated by the rage of pestilence; in feafons of gloomy despondency, or in the exulting moment of fuccess and triumph. The deeper the diffress, or the brighter the triumph, the more diftinguished, by birth and accomplishments, were obliged to be the objects selected for facrifice. Neither the tenderest youth nor the loveliest beauty was fpared; the prieft fometimes expired by the wound of the immolating knife, and kings themselves were sacrificed for the welfare of their subjects. It must still, however, be owned that the altars of Diana in the Tauric Scythia, and, in Egypt, the more gloomy altars of Buliris, (triftes Bufiridis ara,) and some others in the ancient world, were proverbially infamous for the profusion of human blood by which they were contaminated. The mode of devoting to death the miserable victims was various. Some of them were strangled, and so immediately put out of their

their torture; others had the skull shattered by the violent blow of a mallet from the muscular arm of the priest: others were stretched on the back, and had the breast laid bare by the stroke of a fabre, while the unfeeling VATES stood round, watching the tremulous motion of the convulsed limbs, and drawing cruel prefages from the streaming of the vital fluid. The most dreadful and difgusting of all was that adopted by the Scythians, and described perhaps with aggravation by Herodotus.* "They facrifice," fays that historian, " every hundredth man of their prisoners to the deity. They first pour libations of wine upon the head of the victim; they then cut his throat, extended over a chalice to receive the blood; they afterwards ascend the pile of faggots, and wash with the blood the erected scimitar, the emblem of the god. While this is performing by the priefts above, those below, after having deprived the wretched sufferer of life, with the facrificial knife feparate the right arm from the shoulder, which they hurl into the air, and leave the body to putrify upon the ground." It appears, however, as if the victim in India generally perished F 2 by

* Herodoti, lib. iv. p. 277.

by fire, or decapitation, or perhaps, I may add, inhumation; for, that they were no strangers to that practice, is evident from two figures exhibited in Mr. Niebuhr's seventh plate, the heads of which alone are apparent, the bodies being interred quite up to the throat, and a rajah appearing in the sculptures above, as if sitting in judgment upon the criminals.

The doctrine of the Metempsychosis, originally intended to act as a check upon this barbarous propenfity, in time became bafely perverted, and operated as a powerful incentive towards the continuance of these rites of human facrifice, difarming anguish of its sting and the grave of its horrors. The Indians feem, like the Scythians, to have thought, that, in the future state, the splendour of retinue and the tender offices of domestic affection were absolutely necessary to the happiness of the deceased. The account which Texeira gives of fo many women and flaves burning themselves with their lord, the Naique or Viceroy of Madura, is confirmed in a great degree by what Mr. Orme,* in his Historical Fragments, reports, that with Seevajee's corpfe were burnt attendants, animals, and wives. Marco Polo informs us, that, in the island of Ceylon,

[.] See Orme's Historical Fragments of the Mogal Empire, p. 126.

Ceylon, a number of persons of quality; styling themselves " faithful to the king in this world and in the next," were accustomed to destroy themselves when he died. In Tonquin, according to Tavernier, " many lords of the court are buried alive with their fovereign;" and Barbofa, who, with the two preceding authors, is quoted by M. Renaudot in the Anciennes Rélations* in proof of the fact which I am labouring to establish beyond dispute, afferts that in the Indies, particularly among the Naires, it was a cultom for the great men in the pay of the king, when he died or fell in battle, to feek death by revenging his fall, or to lay violent hands upon themselves in order to bear bim company. At the death of the Scythian monarch, we read in Herodotus,+ that the principal officers of his household were strangled together with many fine horses, and in his tomb were deposited golden goblets, and other necessary domestic utenfils, for his use in the other world.

The last resembling custom which I shall notice between the Scythian and Indian nations, was their great veneration for the metros, was their great veneration for the metros.

^{*} See Anciennes Rélations, first part, in note z. p. 33, of the English edition.

f Herodoti, lib. iv. p. 70.

mory of their ancestors. When upbraided by Darius for flying before his army, the former exclaim, " Purfue us to the sepulchres of our ancestors, and attempt to violate their hallowed remains, and you shall soon find with what desperate valour the Scythians can fight." The Indians, we learn from Mr. Holwell, have fo profound a veneration for the ashes of their progenitors, that, on the fast of Callee, worship and offerings are paid to their manes, and Mr. Wilkins, in a note upon the Heetopades, fayours us with additional information, * that the offerings confifted of confecrated cakes, that the ceremony itself is denominated STRADHA, and that a Hindoo's hopes of happiness after death greatly depend upon his having children to perform this ceremony, by which he expects that his foul will be released from the torments of NARAKA, or hell. In his fixth note upon the text of the GEETA, his account of this ceremony is still more ample; for, in that note, he acquaints us that the Hindoos are enjoined, by the Vedas, to offer these cakes to the ghosts of their ancestors as far back as the third generation; that this greater ceremony of the Stradha is performed on the day of the new moon in every month, but that they-

[.] Hestopades, p. 271, and note 572.

they are commanded by those books daily to propitiate them, by an offering of water, which is called Tarpan; a word fignifying to fatisfy, to appeale. A speech of the Indian emperor Dushmanta, in the Sacontala, remarkably exemplifies this observation of Mr. Wilkins. That emperor, ftruck with horror at the idea of dying childless, exclaims, " Ah me! the departed fouls of my ancestors, who claim a fhare in the funeral cake, which I have no fon to offer, are apprehensive of losing their due honour, when Dushmanta shall be no more on earth :- who, then, alas! will perform in our family those obsequies which the Vedas prescribe? - My forefathers must drink, inftead of a pure libation, this flood of tears, the only offering which a man who dies childless can make them." Mr. Wilkins judiciously remarks that these ceremonies were not unknown to the Greeks and Romans, in proof of which, if necessary, many instances might be brought from claffical writers.

SECTION II.

Commences with a general View of the Indian Mythology, and displays the Analogy subfishing between the ancient Religion of INDIA and PERSIA, particularly in their universal and enthusiastic Veneration of the Solar Orb and Elementary Fire .- The Indians facrifice to the Moon under the Character of a Male Divinity. - An extensive Review taken of the SABIAN SUPERSTITION, or Worship of the Host of Heaven, in the earliest Ages of the World .- The Souls of deceased Heroes elevated to the Stars, and adored as the Genii of the revolving Orbs .-The Persian Theology resumed. - The Laws of the Persian Zoroaster and Brahma have a wonderful Feature of Resemblance. - The Race originally the same, and probably the Legislators not different. - The Antiquity of the Four VE-DAS, or Sacred Books of India, examined. -Historical Observations relative to Zoroaster,

and introductory to the Investigation of the stupendous Antiquities remaining to this Day in the Caverns of Elephanta and Salsette.

THE investigation of that unpleasing but curious subject, the human facrifices of the ancients, which engaged fo large a portion of the former chapter, has too long detained us from the confideration of the other parts of the extensive system of the Hindoo Mythology; without a comprehensive insight into which it is impossible to understand the pages of their early history, or to arrive at any satisfactory knowledge of the hieroglyphics under which that history is veiled. Never did a belief in aërial beings, in the phantoms engendered by the warmth of a glowing and enthusiastic imagination, so universally infect a people as that belief did in ancient times, and does, at this day, infect the people of Hindoftan. In the Ayeen Akbery, the world is faid to be divided into ten quarters; over each of which prefides a guardian spirit. Their names, and those of the quarters over which they rule, as stated in that authentic book, are thus arranged: "Indree, Aujin, Jum, Benyroot, Wurrun, Bayoo, Kobeir, Jyfan, Birmha, Naga; East, South-east, South, South-west, West, Northwest.

west, North, North-east, Above, Below." Of these Dewtahs only two are deserving particular notice: Birmha, or Brahma, the prince of the Dewtahs, who prefides over all above, and Naga, or, as Sir W. Jones * denominates him, SESHANAGA, who prefides over all below. Of Brahma we have fpoken above, and shall have occasion to speak much more hereafter. But of this fovereign of Patala, or the infernal regions, who also is the king of serpents, for the Hindoo Hell is composed of serpents, I am convinced my readers will think themselves obliged to me for the following account taken from the Bhagavat, and inferted from the author last quoted. Creeshna is represented in that poem as descending with his favourite Arjun to the palace of this formidable divinity, and he is thus described: "He had a gorgeous appearance, with a thousand heads, and on each of them a crown fet with resplendent jewels, one of which was larger and brighter than the rest; his eyes gleamed like flaming torches, but his neck, his tongues, and his body, were black; the skirts of his habiliments were yellow, and a fparkling jewel hung in every one of his ears: his arms were extended and adorn-

cd

^{*} I am aware that Indree, the god of the firmament, is also frequently called the prince of the Dewtahs. But Brahma is the suppreme first-born Dewtah. Consult the Gentoo Code, p. 39.

SCULFTURE on an amount Mansdenn, at Seriepolis -

The Sun as pourtraya Soul amendant upon a Clem

ed with rich bracelets; and his hands bore the holy shell, the radiated weapon, the mace for war, and the lotos."

The writers who flourished in Greece and Rome had, as I before-remarked, but a very imperfect idea of the true principles of the religion of the Indians. Jupiter Ammon, Bacchus, Pan, and Pluto, are faid, by those writers, to have been the principal divinities worshipped in India. Strabo* expressly says, that they worshipped Jupiter Pluvialis, the river Ganges, and Eyraplous Azinores, Indigetes Genios. Such were the Grecian appellations for the feveral deities, or rather attributes of deity, adored throughout Hindostan. With far more truth was the celebrated GANGES affirmed, by the fame writer, to be an object of fuperstitious veneration, when, charged with the bleffings of Providence, he descended in maiefty from the mountains, and, with his overflowings, fertilized the thirsty foil. In fact, the legislator, whose sublime precepts improved; the hero, who refiftless sword defended; the patriot, whose inventive fancy adorned with useful arts the country that gave them birth; received the fervent prayers of the grateful Hindoo, were first remembered with admiration,

^{*} Strabonis Geograph, lib. xv. p. 682.

tion, and then idolized. Without referring to the Ægyptian Apis, we may affert, that the very animal whose milk nourished him, and whose labours turned the fruitful fod. received his tributary homage, and was ranked in order next to a divinity. This is the general key that unlocks the portals of the grand temple of Indian superstition, and perhaps, taken in a more general point of view, of all the superstitions of every region and of every denomination upon earth. To the philofophic eye, that contemplates without prejudice their endless variety, this is the univerfal clue to their full developement, and thus only can the mighty maze be intimately and fuccessfully explored.

Besides the deities above-enumerated, the Indians have a guardian genius, presiding over water, named Varuna;* over fire, named Agni; the forger of the siery shafts, called from him Agnyastra; † and over the winds, ‡ named Pavan. All the fanciful characters of a mythology, not greatly dissimilar from that of Greece and Rome, seem to have prevailed among the Hindoos from the earliest periods.

They

^{*} See an engraving of Varuna with her inlignia, opposite p. 215, of the first volume of the Asiatic Researches.

[†] Afiat. Research. vol. i. p. 248. 1 Ibid. 258.

They have CARTICEYA,* the god of war, formidable with fix heads, and bearing, in his numerous hands, spears, fabres, and other hostile weapons; whose prowess is not inferior to the Mars of Rome. They have LACSHMI, the goddess of plenty, and the wife of Veeshnu the preferver; who, in Mr. Holwell's descriptive print, is represented crowned with ears of grain, and encircled by a plant, bearing fruit, forcibly reminding us of the Ceres of the ancients. They have SERASWATTI, the protectress of arts and sciences, with her palmiraleaf, and her reed or pen for writing; ornaments more peculiarly characteristic of her high station than those which graced the armed Minerva of the Greeks. They have a more beautiful Capid in CAMA, the god of love with his flowery shafts and cany bow: although a regard to truth forbids me to add, that they have a more decent Venus in BHAVANI, the confort of Seeva, and goddess of generation; in honour of whom, on all the walls of the pagodas of Hindostan, sacred to that deity, fuch pictures are delineated and fuch images are engraven, as though by no means inconfiftent with their, are not at all compatible with

our,

^{*} Afiat. Research. 252, with an engraving. Carticeya is generally written Karteek. The former is the Sanfcreet word unabridged.

our, notions of delicacy and decorum. These are indeed the fanciful creation of poets and painters; but the characters of a mythology far less pleasing were, before their exhibition, deeply imprinted on the minds of the Hindoos. They were prepared for the reception of whatever partook of the nature of fable and mystery; and if the sportive imagination wandered occasionally in the regions of mirth and festivity, they were soon recalled, by impressions at once awful and durable, to the contemplation of more gloomy objects. They found matter of alarm and dread even in the attributes of the facred triple deity, who was appointed to be their defender against the malevolent Dewtah; and if, at one time, the amiable character and office of the preserver Veeshnu inspired them with grateful affection and veneration, they were, at other times, filled with the utmost horror in contemplating the dreadful infignia and the defolating fury of the destroyer Rudra, or Mahadeo.

Although I am apprehensive of incurring the censure of my readers for extending to too great a length these restections upon what is called, in India, the worship of Dewtahs, and, in other countries, that of Dæmons; yet, before I shall be able to give any clear or satisfactory idea of the probable devotion anciently practifed in the caverns of Salfette and in the magnificent pagoda of Elephanta, it is necelfary that we should still wider extend our furvey of this stupendous subject. What has already engaged our attention is but a portion of that gigantic fabric of superstition which cast its mighty shadow over all the ancient world. The more splendid part of that devotion remains still to be noticed. The former were earth-born deities, and we have loitered too long with the untutored Indian who only fees "God in clouds, and hears him in the wind." As there were deities who were permitted to range the earth, so there were deities of a more exalted nature, who, as we before-observed, had their station in the celestial orbs. Those glittering orbs now demand our attention. Let us afcend the empyreum with fome portion of the zeal and fervour of the adorers of those shining, but senseless, deities.

Two of the principal fources of all mythology, particularized by Sir W. Jones, are, a wild admiration of the heavenly bodies, particularly of the Sun, and an immoderate respect paid to the memory of powerful, wise, and virtuous, ancestors, especially the founders of kingdoms, legislators, and warriors. If this remark on

the origin of mythology be generally applicable to most nations, so it is in a peculiar manner forcible in the furvey which we are now taking of that of the Hindoos. It is the Sun, that vast body of fire, which, Milton fays, ** Looks from his fole dominion like the god of this new world," it is that glorious planet, which beams with fuch transcendant and unceasing splendor in Eastern countries, whose ray hath kindled the devotions of mankind from age to age, and hath been the great fountain of idolatry in India. Indeed the most ancient fuperstition of all nations has been the worship of the Sun, as the lord of heaven and governor of the world, and in particular it prevailed in Phænicia, Chaldæa, Egypt, and, from later information, we may add, Peru and Mexico. Represented in a variety of ways, and concealed under a multitude of fanciful names, through all the revolutions of time the great luminary of heaven hath exacted from the generations of men the tribute of devotion.

How particularly the ancient Persians were addicted to this mode of worship, how profound and universal was their veneration of FIRE, and particularly of the SOLAR FIRE, is evident in every page of Dr. Hyde, who has made that religion the subject of his accurate

investigation.

investigation. The infatuated votaries of this religion were forbidden to spit into the fire, or to throw water upon it, even if the metropolis were in flames. The Magi, however, as has been before-remarked, did not deny a SUPREME PRESIDING PRINCIPLE, the Creator and Governor of the universe, who was the proper object of man's adoration, but they confidered the Sun as his image in the visible universe, as a faint copy of the bright original, worthy to be honoured with external worship and devout prostration. They imagined his throne to be feated in the Sun; and that it was the paradife of the bleffed. From the Magi of Persia the idolatrous infection might eafily spread to the Brachmanes of India, between whom an occafional intercourse from the earliest ages may, without violating probability, be supposed to have existed. Under the character of the god Surya, of whom, and his car, drawn by feven green* horses, and guided by his charioteer ARUN, or the Dawn, an engraving is given in the Afiatic Researches, the SOLAR ORB is regarded with adoration by the Hindoos, and the fect more particularly devoted to the worship of that deity are called SAURA. Indeed it is not improbable that, in very remote æras, Vol. II. the

[.] Green, as the emblem. I prefume, of eternal youth.

the Indians held the Sun in almost as general veneration as their Perfian neighbours. We are informed by a writer, * who vifited India feventeen hundred years ago, that he there beheld a most superb temple erected in honour of that planet, the walls of which were of red marble, refembling fire, and interspersed with streaks of gold. On the pavement of this temple was an image of the radiant divinity, hardly inferior in splendour to his own dazzling fphere: his rays being imitated in a boundlefs profusion of rubies, pearls, and diamonds, of ineftimable value, arranged in a most judicious manner, and darting forth a luftre fearcely tolerable to the organs of fight. As this account of Apollonius may be confidered as suspicious, I shall here insert a description of the TEMPLE of the Sun from the Aycen Akbery, which, although Mr. Gladwin conceives Abul Fazil to have been deceived in regard to its magnitude, fince no traces of this vaft fabric at prefent remain, will yet be confidered as a proof that fuch a worship did actually flourish there at some remote period in its meridian glory.

" Near to Jagernaut is the temple of the Sun, in the erecting of which was expended the whole revenue of Orista for twelve years.

No

Philoficatus in Vit. Apollon. lib. ii. p. 87.

No one can behold this immense edifice, without being ftruck with amazement. The wall, which furrounds the whole, is one hundred and fifty cubits high, and nineteen cubits thick. There are three entrances to it. At the eastern gate there are two very fine figures of elephants, each with a man upon his trunk. On the west, are two surprizing figures of horsemen completely armed; and over the northern gates are carved two tigers, who, having killed two elephants, are fitting upon them. In the front of the gate is a pillar of black stone, of an octagonal form, fifty cubits high. There are nine flights of steps; after afcending which, you come into an extensive enclosure, where you discover a large dome, constructed of stone, upon which are carved the sun and the stars, and, round them, is a border, on which is represented a variety of human figures, expressing the different passions; fome kneeling; others proftrated with their faces upon the earth; together with minstrels, and a number of strange and wonderful animals, fuch as never existed but in imagination."* This is faid to be a work of feven hundred and thirty years antiquity: it was erected by a RAJA. The Ayeen Akbery farther informs

^{*} Aycen Akbery, vol. iii. p. 11-

informs us, that some of the Hindoo philosophers consider the fixed stars and planets as Beings, and as borrowing their light from the sun; others affert that they derive their light from the moon, and believe each to be under the influence of some celestial spirit; while others, again, affirm, that the stars are the souls of men departed this life, and raised to this high dignity in reward of their virtues and austerities.

At this day the Indian rajas are fond of tracing back to the folar deity their fabulous origin, and Mr. Dow * acquaints us, that he himself was in possession of a long list of a dynasty of kings, who boasted the distinguished title of SURYA-bans and CHANDRA-bans, or children of the fun and moon. The Afiatic Refearches confirm and explain this intelligence, by informing us, that SURYA+ is believed to have frequently descended from his car in a human shape, and to have begotten an earthly progeny, equally renowned in the Indian stories with the Heliades of Greece: and that another great Indian family are called the children of the moon, or CHANDRA, under which form Eswara, or the God of nature, is often worshipped. We must not be

[.] Dow, vol. i. p. 31. + Afiat. Refearch. vol. i. p. 263.

be furprised, the prefident of the Afiatic Society observes, at finding, on a close examination, that the characters of all the pagan deities, male and female, melt into each other, and, at last, into one or two; for, it feems a well-founded opinion, that the whole crowd of gods and goddeffes, in ancient Rome and modern Varanes, means only the powers of nature, and, principally, the sun. He owns himself inclined to believe that not only Creeshna or Veeshnu, but even Brahma and Seeva, when united and expressed by the mystical word OM, an expression that frequently occurs in Sanfcreet invocations * of the deity, were defigned by the first idolaters to represent the SOLAR FIRE. By the triliteral word A U M, which letters coalesce and form OM, the triple divinity, Brahma, Veefhnu, and Seeva, are meant to be expressed; or, in other words, the power of the Almighty to create, to preferve, and to destroy. It may be added that the term OM is confidered in fo facred a light, that it never escapes the lips of a pious Hindoo, but is the subject of his meditation in holy and profound filence. Their mode of adoring the sun is faid, by Lucian, G 3

^{*} It particularly occurs in a most sublime prayer to Boods, translated by Mr. Wilkins, in Asiat. Research. vol.i. p. 285.

Lucian, in his treatife de Saltatione, to have confifted in a circular dance, in imitation of that orb's supposed motion round the earth, by which all nature was gladdened, and from which the various ranks of beings derived light and support. SURYA KOOND is mentioned, under the Subah of Owd, in the Ayeen Akbery, as a place of religious worthip very celebrated and much frequented; and a festival, called the SURYA POOJA, or the worship of the sun, Mr. Holwell # acquaints us, is still observed on the seventh day of the new moon, in January, when peculiar offerings of flowers are made to that luminary in the Ganges. The vestiges of this fuperstition are, in fact, at this day, evident in all the facred rites and multiform ceremonies of the Brahmins. At their first putting on the ZENNAR, or facred cord of three threads, the mystic symbol of their faith, they learn the gayteree, which are certain words in praise of the sun. At fun-rise they turn to the east, and, filling the palms of their hands with water, and at the fame time repeating a prayer, they throw it towards that luminary. They preferve, confantly

See Holwell on the Genton falls and fellivals, India Tracts, partii. p. 134-

ftantly burning, a kind of facred fire, kindled by the friction of two pieces of palass-wood, with which they perform the howm, or burnt facrifice. The new-born babe of a Brahmin is obliged to be exposed to the folar beam, and, in the words of the Ayeen Akbery,* to conclude, and in some degree to explain, the mystic rite, THEY WORSHIP GOD IN THE SUN AND IN FIRE.

The following passages, in proof of what has been advanced, concerning the veneration entertained by the Indians for the sun and fire, are extracted from the three principal translations, from the Sanscreet, which have yet appeared in the English language; I mean the Geeta and the Heetopades, published by Mr. Wilkins, and the beautiful drama of Sacontala, or, The fatal Ring, by Sir William Jones. These three compositions are of the most venerable antiquity, and in them, doubtless, are displayed the manners and the pinciples prevailing at those remote æras in which they were written.

In the GEETA, Arjun is informed by Creeshna, that "God is in the fire of the altar, and that the devout, with offerings,

G 4 direct

^{*} Ayden Akbery, vol. i. p. 215, 220, 227, where all thefo various circumflances are flated at large.

direct their worship unto God in the fire." P. 54. "I am the fire, I am the victim." P. 80. The Divinity is frequently characterized in that book, as in other Sanfcreet compositions, by the word OM, that mystic emblem of the. Deity in India, bearing, probably, the fame fignification as the Egyptian ON, which, Sir William Jones observes, * is generally supposed to mean the sun. Besides innumerable allusions, throughout the text, to the "ardent fire, the glorious fun, the immeasurable light," in the episode annexed, the refulgent CHAKRA, or warlike weapon of Narayan, beautiful, yet terrible, to behold, is faid to have "glowed like the facrificial flame," and to have " burnt like the oil-fed fire." Pages 150 and 151.

In the HEETOPADES it is faid, that "fire is the superior of the Brahmins, as the Brahmin is the superior of the tribes." P. 35. In the note on this passage, Mr. Wilkins remarks, that this element, in ancient times, seems to have been universally deissed; that the Hindoos are enjoined, by the Vedas, to light up a fire, produced in the manner I before stated from the Ayeen Akbery, and to cherish it as long as they live. With this fire, he adds,

all their facrifices are burnt, their nuptial altar flames, and, finally, the funeral pile is kindled: "The sun should be worshipped on the back, the God of fire on the belly."
P. 101.

In the SACONTALA Still more numerous instances occur, in which the orb of the fun and the hallowed fire are spoken of and addreffed in terms of adoration: " Water was the first work of the Creator, and fire receives the oblations ordained by law; the facrifice is performed with folemnity; may Isa, the God of nature," (a personification of the Sun, the Isis of the Egyptians,) " blefs and fustain you!" The following pallage will prove of two-fold utility towards explaining and illustrating what has before been remarked: " O king," exclaim the pupils of the venerable Canna, amidst the central glooms of their holy grove, " while we are beginning our evening-facrifice, the figures of bloodthirfty dæmons, embrowned by clouds, col-1: Eted at the departure of the day, glide over the facred bearth, and spread consternation around." P. 38. " My fweet child, there has been a happy omen: the young Brahmin who officiated in our morning-facrifice, though his fight was impeded by clouds of fmoke, dropped

ped the clarified butter into the very centre of the adorable flame." "When he entered the place where the boly fire was blazing, he heard a voice from heaven pronouncing divine measures." "As the wood, Sami, becomes pregnant with mysterious fire." P. 42. " My best-beloved, come and walk with me round the facrificial fire; may these fires preserve thee! fires, which spring to their appointed stations on the holy hearth, and confume the confecrated wood, while the fresh blades of mysterious cusa-grass lie scattered around them! facramental fires, which destroy fin with the rifing fumes of clarified butter!" P. 47. " Could Arun" (the charjoteer of the Sun, that is, the dawn) " dispel the shades of night, if the DEITY WITH A THOUSAND BRAMS had not placed him before the car of day?" P. 85. In felecting these passages from the drama of Sacontala, I have reluctantly passed over pages glowing with all the splendour of Oriental imagery, crowded with fuch novel and beautiful descriptions, and breathing such elevated sentiments of friendship, as well as fuch impassioned strains of tender affection, that I cannot too ftrongly recommend to the reader an attentive perufal-of the whole piece, and he will not fail heartily

to join with me, in hoping that the translator may recede from his declared resolution to engage no farther in talks of a similar nature.

The Moon, the next conspicuous luminary of heaven, is by no means without bis tribe of adorers in Hindostan. His, I say; for, contrary to all other fystems of mythology, the Moon shines forth to the Hindoos a male divinity. This is furely an argument that proves how little they have condefcended to borrow from other nations; for, in this male deity, we are unable to trace even the Ifis of Egypt, whom Herodotus* declares to have been constantly represented and worshipped, at Bufiris, under the form of a woman with the horns of a cow, (as IO was in Greece;) upon which account, and because that animal was facred to Isis, the cow was held in the highest veneration throughout Egypt. The Indian name of the Moon is CHANDRA, and Mr. Wilkins, our unerring guide, informs us,+ that he is drawn by the fancy

^{*} Heredoti, lib. ii. p. 118. Stephani edit. 1592. This whole fecond book of Herodotus, and part of the third, treats of the Egyptians, their hillory, religion, and manners, and therefore I have minutely attended to it.

⁺ Meetopades, p. 177, and note 235.

fancy of the Hindoo poets as a deity, fitting in a splendid chariot drawn by two antelopes, and holding in his right hand a rabbit. We learn from the Heetopades, that, to him, fountains were dedicated. Of those facred fountains there are many in Hindostan: and, in particular, the Ayeen Akbery reports,* that, in the village of Kehrow, in Cashmere, there are no less than 360; a number worthy of notice, because the exact number of the days of the ancient year, before it was reformed by more correct observation. To pierce the hitherto-unexplored depths of the Hindoo system of astronomy, connected as that fystem is with their religion, is alike beyond the scope of my ability and the means of information in my possession. If ercouraged by the public to proceed in thefe investigations into the ancient history and sciences of that country, I shall, in a future portion of this infant work, attempt the arduous talk of prefenting my readers with the substance of what is already known on that head; and shall principally regulate my refearches by the chapter on aftronomy in the Ayeen Akbery, which is a professed extract from the famous Surya Sudhant of India,

[.] Ayeen Akbery, vol. ii. p. 159.

India, a book composed, Abul Fazil informs us, " fome hundred thousand years ago;" by M. Bailly's celebrated " Traité de l'Aftronomie Indienne et Orientale;" by Mr. Playfair's accurate and ingenious differtation, lately published in the second volume of the Transactions of the Royal Society of Edinburgh; and by the vast treasure of information to be collected from Mr. Coftard's profound Treatife upon the Aftronomy of the Chaldæans, Arabians, and other Eastern nations. For the present it will be fufficient for us to take a general retrospect of the gradual advances made by the human mind, from contemplating and admiring the celestial orbs, to deifying and adoring them. This will in its consequences lead us to a more particular confideration of that other principal fource of all mythology mentioned before, viz. an immoderate respect paid to the memory of powerful, wife, and virtuous, ancestors, efpecially the founders of kingdoms, legislators, and warriors.

Devoted to pastoral life, and scattered over the extensive plains of Asia, the ancient fathers of the human race could not avoid being deeply struck with the number, the beauty, and the splendour, of the heavenly bodies.

Amidst the silence of furrounding night, in those delightful regions where the mildness of the climate allows the inhabitants to fleep in the open air, the wakeful eye of contemplation beheld and marked the flow progreffive motion of those bodies through the clear blue fky above them. They observed their various mutations, they noted their distinguishing phænomena, the rifing of fome and the fetting of others; and, from that ascension and decline, they learned to regulate their conduct as to the times and the feafons proper for the fowing of grain and the tillage of the ground. In process of time they formed catalogues of the stars, they arranged them under various classes, and regiftered them in regular feries. They portioned out the visible firmament itself into fortyeight different constellations, and, in conformity to the hieroglyphic tafte of the times, distinguished those constellations by the figures of various animals and other imaginary fimilitudes. From long and accurate observation of the confequences attending the particular fituation of fome of them in the heavens, they supposed these revolving orbs to have an influence upon the earth and upon the feafons; and the Greek and Roman poets, probably imitating the ancient writers of Egypt and Syria, crowd their pages with allusions to those supposed influences. Non hac Pleiades faciunt, nec aquosus Orion.*

Nec fævus Arcturi cadentis Impetus, aut orientis Hædi.+

A passage, which occurs in the ancient and venerable book of Job, feems pointedly to allude to the reigning superstition of the day. Canst thou restrain the sweet influences of Pleiades, or loofen the bands of Orion? It was natural for those, who maintained the doctrine of their influence upon the elements of nature, to extend still farther their romantic conjectures, and to affert a fimilar predominant influence of the celestial orbs in all terrestrial concerns, but especially in the important and interesting events which befal great nations; in the prosperity and desolation of kingdoms; in the elevation to empire of triumphant virtue; and in the downfal of defeated tyranny. The planetary train, that constitute our own syltem, as performing their revolutions nearer the earth, were thought to have a more particular ascendency over the sate of its inhabitants :

^{*} Propertius, ii. 16, 51. + Hor. iii. Carm. t. 27.

bitants; and the period of their transit over the sun's disk, and that of their occasionally coming into conjunction with any other constellation, was regarded as a period pregnant with the most awful events, and productive of the most associations vicissitudes.

Impressed, therefore, with alternate wonder and terror at beholding these imagined effects of their influence upon this globe, from vigilantly observing, mankind proceeded by degrees to respect and venerate them, and intense ardour of contemplation in time mounted to all the fervor of devotion. Some of the ancients supposed the stars to be inhabited by beings, who not only guided their motions. but directed their benign or pernicious influences, and, confequently, to those prefiding beings they addressed their adoration. Others imagined the STARS to be themselves animated intelligences, or zophesemin; and paid to the sphere the worship due to its Maker. But almost every nation of the ancient world united in confidering them as the refidence of departed spirits and the glorious receptacles of beatified virtue. According to the preceding extracts from the Ayeen Akbery, the Hindoo philosophers were deeply infected

[·] See Bishop Cumberland's Sanchoniatho, p. z.

infected with each of these errors; and the accounts given by Sir Robert Barker * in the Philosophical Transactions of the remains of astronomical and mathematical instruments, " stupendously large, immoveable from the spot, and constructed of stone, some of them upwards of twenty feet in height," which he faw in the ancient observatory of Benares, as well as the discovery which Mr. Call + reports, in the fame book, he himfelf made of the figns of the zodiac on the ceilings of many of the more ancient choulteriesof the Peninfula, strongly incline us to think that the science of astronomy was, in ancient India, carried to the utmost height of perfection, attainable in those periods and by those instruments: and at the same time it was undoubtedly attended with all those degrading fuperstitions, such as divination, incantation, and judicial aftrology, which were its inseparable concomitants in that early æra. It is a most fingular circumstance, that the days of the week, in India, are arranged as in Egypt and Greece, according to the number of the planets, and are diftinguished by fimilar appellations, and, for my own VOL. II. part,

[.] Phil. Transact. vol. lxvii. p. 598.

⁺ Phil. Transact. vol. Ixii. p. 353-

part, I have not a doubt but that the various spheres, or boobuns, of purification, through which the doctrine of the Metempsychosis, as explained by Mr. Halhed,* has doomed the soul to pass in its progress to consummate happiness and perfection, have a direct allusion to the planets. But I am launching into a vast ocean, in which it was not at present my intention to venture my small bark.

To those bright and conspicuous mansions of the sky, as I have observed, the service adulation of the ancient nations of the earth exalted the departed spirits of illustrious kings and legislators; while the partial fondness and blind zeal of individuals wasted to the same happy regions the souls of their deceased progenitors who were venerable for religion and virtue. A variety of passages in the ancient poets may be adduced in proof of this affertion, but particularly one in Virgil, who, in a strain of unmanly slattery to Augustus, while yet living, asks him among which of the constellations he will choose to take up his future residence.

Anne

See page 46 of his Preface to the Genton Code, quarto edition, and page 41 of the fame Preface, where the Sanfcreet names of the days of the week are enumerated in their proper order, as they also are in the Ayeen Althery, p. 12.

Anne novum fidus tardis te menfibus addas Qua locus Erigonen inter Chelasque fequentes Panditur? Ipfe tibi jam brachia contrahit ardens Scorpius, et cœli justa plus parte reliquit.

Georg. i. 33.

These lines are also quoted by that ingenious astronomer, Mr. Costard,* but for another purpose, the elucidation of an astronomical remark; and it would appear from that remark, that the accuracy of the poet's description does him greater honour than the fulsome compliment contained in them did Augustus.

The contagion of fidereal worship, in consequence of the stars being regarded as animated intelligences, or as inhabited by divinities, spread rapidly and universally among all the nations of the Eastern world, except among that savoured people to whom the Almighty thought proper to reveal the glorious doctrines of the true religion. For, thus, in the most ancient and most sublime drama which the human intellect ever produced, the devout Jos makes protestation of his innocence as to the crime of this prevailing idolatry: + If I beheld the sun when it shined, or the moon walking in brightness; and my heart bath been secretly enticed, or my mouth bath kissed my band: this, also,

H 2 were

^{*} See Coffard's Aftronomy, p. 19. + Job, c. xxxi. v. 26.

were an iniquity to be punished by the Judge; for I should then have denied the God that is above ! The planets, in time, became distinguished by the names of the most renowned personages in fabulous antiquity, Saturn, Jupiter, Mars, Apollo, Mercury, Venus, and Diana; but thefe orbs, from their rifing and fetting, being frequently concealed from the view of the enthufiaftic adorer, invention supplied their place by forming representative images of those fancied deities, to whom, after folemnly confecrating them, they paid their devotion with as much fervour as to the real planet. In this practice, as Dr. Prideaux* has judiciously observed, we trace the first origin of the Sabian Superstition. or worthip of idols, in which abomination the ancient pagan world were fo deeply immerfed; and, from this period, Saturn, Jupiter, and the other fidereal divinities, continued to be holden in the most facred veneration through all the periods of the Affyrian, Greek, and Roman, empires. Before these figures, which they invoked by the feveral names their blind bigotry has affigned them, in deep caverns

^{*} See Prideaux's Connections, vol. i. p. 178, and, likewife, those of Dr. Shuckford, vol. ii. p. 388, who, notwithstanding the severe attacks of Warburton, on this subject of the origin of the various species of pagan idolatry, has displayed crudition little inferior to that of the haughty critic.

and woody recesses, the first temples of the world, they performed their mysterious rites; they kindled the facred fire, of which their glowing spheres seemed to be formed; and they offered oblations to them of the nobleft beafts of the field and the choicest productions of the earth. In the wild delirium of their zeal, and under the impulses of a sacred fury, they shouted aloud the lofty pæans of praise and triumph; they mingled in the circular dance, which was intended to imitate that of the planets; and they tried the most potent fpells, and uttered the most tremendous incantations, in full confidence of drawing down, into those symbolic figures, the same powerful spirits which were supposed to roll them through the æther, and the same bland or baleful influences which they were believed to dispense from on high.

That a confiderable portion of the hieroglyphic sculptures and paintings, in the temples of Hindostan, have an astronomical allusion, has never been doubted by those who have accurately surveyed and attentively confidered them; though their latent meaning and intricate history have never been completely developed. The blaze of glory streaming from the radiated crowns on the heads of all the

H 3

AVATARS,

AVATARS, whose figures are engraved in the Asiatic Researches, speak their descent from the regions of light and glory; the emblematical ornaments of serpents that deck the venerated statues of the GOD-RAJAHS, who frown on the walls of the various cavern-pagodas; the figures of sacred and sidereal animals, sculptured near them; the sacerdotal vases for oblation; the consecrated bells which the hands of some statues bear, and the sacred zennar and staff of Brahmins which distinguish others; all these circumstances united evince their immediate connection with the profoundest mysteries of science and with the most awful rites of religion.

We have not yet come to the examination of the ancient Egyptian superstitions, and their striking similarity to those of India; but if we cast a digressive eye towards that country, and examine the catalogue of her numerous deities; if we attentively peruse the varied page of their history, and mark the discriminating seatures of their several characters; we shall find them, for the most part, to be nothing more than HEROES DEIFIED. Thus, Vulcan, Bacchus, Thoth, Hercules, having, by their skill in arts or their prowess in arms, greatly benefited the early inhabitants of the world; as, for instance, Vulcan,

Vulcan, by the invention of the forge and by instructing mankind in the use of fire; Sefostris, or Bacchus, by teaching them the right method of agriculture and of planting the vine; Thoth, or Hermes, by the invention of letters and the patronage of science; Hercules, by the unparalleled labour of draining the lakes of Egypt, and by overthrowing in battle Busiris and its other tyrannic princes, those giants in power and monsters in vice; by such illustrious exploits these august personages succeffively rose to immortal honours. The same remark, probably, holds good in regard to India, or even applies with still greater force. If we could diveft the history of its most ancient fovereigns of the fabulous ornaments, with which adulatory poetry and reigning superstition have decorated them, they would appear to be only a race of dignified mortals, diffinguilhed-by their wifdom as legislators, their erudition as philosophers, or their fortitude in battle. Thus RAMA, one of the great incarnate deities, whom the Indians believe to have been an appearance on earth of the preferving Power, and whom Sir William Jones takes to be the Indian Bacchus, when stript of his divine honours, will appear to be only the sove-REIGN OF AYODHYA, a conqueror of the higheft H 4

est renown, and the deliverer of nations from tyrants. Thus Brahma himfelf, if we may be allowed for a moment to lose fight of the etymology of his name, and rend the allegoric veil that shadows his person, might only have been the GODLIKE MORTAL, profoundly skilled in theology and legislation, who first polished a barbarous people, regulated their conduct by an admirable code of falutary laws, and gave energy and stability to an unsettled government. Mr. Scrafton is of opinion that Brahma was king as well as legislator over all the vast continent of India,* and that he intended, by the folemn obligations of religion, to fix the attachment of his subjects to their own country as well as to bind them to the observance of his laws. The learned personage, to whose deep researches into the Indian mythology I have so often had occasion to refer, feems to countenance a fimilar opinion, when he offers a conjecture that the former deity was in reality Rama, the fon of Cufb, + who might have established the first regular government in this part of Asia. The Ayeen Akbery, too, appears to decide the matter, where that book

[•] See Mr. Scrafton's Reflections on the Government of Hindonson, p. 5.

[†] Afar. Refearch. vol. 1. p. 258.

book affirms that RAMCHUND was rajah of Owd,* in the Tretab Yug, and that he united in himself the two-fold office of king and

prophet.

But it is now necessary that we should once more direct our attention towards Persia.-The profound reverence, before-noticed to have been equally entertained by the Magi of Perfia and the Brachmans of India, for the SOLAR ORB and for FIRE, forms a most striking and prominent feature of resemblance between the religion of Zoroaster and that of Brahma. Indeed if any person, deeply skilled in the principles of both fystems of theology, were minutely to examine and compare them together, I am convinced, that, except in the dreadful instance of that incestuous commerce allowed his disciples by the Persian legislator, and fome peculiar local fuperstitions practifed by the Indians, no very material difference would be found between them. But Zoroafter, according to Ulug-Beg, quoted by Dr. Hyde, was the greatest mathematician and astronomer that the East in those remote periods ever faw. He had so far penetrated into the great arcana of nature, and had raised the Magian name to fuch a height, that, in the darker

^{*} Ayeen Akbery, vol. ii. p. 41.

darker ages which succeeded, they were supposed to possess supernatural knowledge and powers; and hence the odious term of magic has been ever since bestowed upon arts that seemed to surpass human power to attain, and that of magicians upon those who practised them. In the union of astronomy and theology, which were sister-sciences in those days, we shall perhaps find an explanation of those mysterious rites of cavern-worship, the origin and nature of which have so long perplexed the ingenious in their inquiries, concerning the species of devotion supposed to have been anciently practised in the caverns of Salsette and Elephanta.

Whatever might have been the oldest species of devotion originally celebrated either in Perfia or India, and most likely, from human nature being every where open to the same impressions, it was this worship of the Sun, it is
probable that Brahma, and it is certain that
Zoroaster, only improved upon the popular
superstition, rejecting the more gross, and retaining the more refined, parts of the ancient
rites and ceremonies already instituted in each
country. Of Zoroaster there are two opinions:
the first is, that he was king of Bactria, and,
according

according to Justin,* lived so early as the days of Ninus, by whom he was flain in battle; the fecond and more generally received opinion is that maintained by Dr. Hyde, who afferts that he flourished in the reign of Darius Hystaspes, about 520 years before Christ, that he was of no very exalted origin, and that he refided in Babylon during the Jewish captivity, where he obtained that intimate acquaintance with the doctrines of the Hebrews which appear fo conspicuously in many parts of his ZEND. The learned Drs. Hyde+ and Prideaux‡ in my humble opinion too far violate probability when they represent Zoroafter to have been himfelf a native of Palestine, of Jewish parentage, and to have lived a menial fervant in the families of either Ezra or Daniel. The profound and various learning which he policifed supposes a descent far less inglorious, and an education far more polished, than a mere flave could possibly have enjoyed; and, if he had been a Jew, he would not have neglected to enforce upon his disciples the neceffity of that peculiar rite which forms the characteristic distinction of the progeny of Abraham.

[·] Justie, lib. i. c. i.

[†] Hyde's Hift. Relig. Vet. Perf. cap. xxiv. p. 314.

¹ Prideaux's Connections, vol. i. p. 213.

Abraham. He found the people of Persia immerfed in the depth of that gross idolatry, the fire-worship, established by the Magians; for, though they pretended to worship God in the fire, the Deity himself had long been forgotten in the fymbol of his worship. He purged their minds of the impure and fenfual depravity. He revived among them the principles of that genuine religion, which time, and objects more palpable, had effaced from their minds. He called himself the restorer of the primitive devotion of Abraham, that great and enlightened patriarch, fo highly venerated throughout all the East; and, as he had read that the Almighty fpoke to Moles out of the burning bufb, and to the whole affembled fons of Ifrael out of the fire, that glowed on Mount Sinai; that he had manifested his divine presence to them, on their march from Egypt, under the appearance of a column of flame; that he refided in the luminous glory, displayed between the cherubin; and that he had commanded a never-dying flame to be cherished on the great altar of his temple at Jerusalem, on which the burnt-sacrifices were offered: animated by these circumstances, the artful theologue pretended that he himself had been admitted to a vision of the Most High; and, being taken up into heaven,

had been addressed by the Eternal from the midst of a vast and pure circle of surrounding slame. By this plea he justified a practice which he would have found it dissicult to crush; he gratisted the wishes of the prejudiced; he obtained the approbation of the sovereign; and he effected a change without the hazard of an innovation.

Brahma being, avowedly, a mythologic perfonage, I can give no historical account of the æra when the code, that bears his name, was acknowledged as the fovereign law of India; for, that is furely inadmissible which Mr. Dow's Prefatory Differtation fixes, viz. 4887 from the year 1769, when that Differtation was written, and confequently above 4000 years previous to the present year. From the variety of the doctrines of which the facred volumes of India treat and of the sciences which they discuss, from the clathing, and, in the instance of sanguinary sacrifices and vindictive incantations, from the absolute contradiction. of the mandates inculcated in them, as well as from their bulk, it is probable that the Vedas were not the labour of one legislator only, but the refult of the collective wisdom of ages: the august fabric of many legislators, accommodating themselves, as all legislators occasionally occasionally must, to the sluctuating principles of the times, the successive superstitions or the progreffive improvement of the people. This idea is, throughout his treatife, maintained by Mr. Holwell,* who, from evidence obtained in India, afferts, that the fourth Veda, in particular, is a publication fifteen hundred years posterior to the other three. This opinion is, I know, combated in the Prefatory Differtation of Mr. Dow,+ and by fome other writers still more respectable; yet I have folid authority for thinking Mr. Holwell's affertion to be founded in truth. The argument in favour of this opinion, advanced in the Afiatic Refearches, ‡ is two-fold. The first arises from the very fingular circumstance of only three Vedas having been mentioned in the most ancient and venerable of the Hindoo writers; and the names of those three Vedas occur in their proper order in the compound word Rigyajubsama, that is to say, the Reig Veda, the Yajush Veda, and the Saman Veda. The fecond argument is drawn from the manifest difference in the style between the fourth

[.] Holwell, part ii. p. 13. † Dow's Prefat. Differt. p. 30.

¹ Afiat. Refearch. vol. i. p. 346 and 347. See also, on this subject, Mr. Wilkins's presace to the Bhagvar Geeta, p. 25, whole argument is decitive.

fourth or Atbarva Veda and the three before named. That of the latter is now grown fo obfolete as hardly to be intelligible to the Brahmins of Benares, and to appear almost a different dialect of the Sanscreet, while that of the former is comparatively modern, and may be easily read, even by a learner of that facred language, without the aid of a dictionary. I am entirely at a lofs, without fome fuch supposition, to account for the contradictions just mentioned and many others in the Vedas; for, to enjoin a politive institution in one page, and, in the next, to infert precepts of a direct contrary tendency, in the important article of national religion, argues an inconfistency of which no intelligent Deity nor wife legislator could be guilty. Amidst these contradictions therefore, for the sake of confistency, I am compelled to suppose the existence of such a circumstance, or else some interpolation or mutilation of the Brahmins, who, like the Egyptian priefts, kept those facred books from the inspection of the vulgar, and altered the text, or explained its meaning, as they pleased. The just and benevolent parts I am willing to impute to Brahma, or that first wife legislator to whom we apply that fictitious name; and the arbitrary, the

the fanguinary, and the contradictory, portions to less-enlightened legislators, and to degenerate and mercenary priefts, acting under their influence. The various detached pieces, of which this vast compendium of theology, ethics, and almost all the other sciences, confifts, were collected together, we are informed, at a very ancient period, from every part of India, by a great and reputed philosopher of the name of VYASA, who reduced them into their present form, and divided them into four distinct books, which are called the Vedas, or books of SCIENCE; for, that, according to Mr. Wilkins, is the proper fignification of the word Veda. No regular translation of these books has yet appeared in any European language; but Sir William Jones has given it as his opinion, that the principal worship, inculcated throughout them, is that of fire, particularly the folar fire; and I trust I have fully proved that the practice of the Hindoos, under the plea of adoring God in that element, is even at this day very strictly conformable to that doctrine. Sir William, in fact, goes beyond this point; for, in the discourse on the literature of the Hindoos, he acquaints us, that " the author of the Dabistan describes a race of old Persian fages,

fages, who appear, from the whole of his account, to have been Hindoos; that the book of Menu, faid to be written in a celestial dialect and alluded to by the author, means the Vedas, written in the Devanagari character;* and that, as Zeratusht was only a reformer. in India may be discovered the true source of the Persian religion." While I confess my readiness to bow down to such superior authority, it is necessary I should inform the reader, that most of the ancient Greek and Roman writers unite with Justin in placing the age, in which Zoroaster lived, much higher in antiquity. Pliny,+ in particular, mentions a Zoroaster, who lived "fex millibus annorum ante Platonis mortem;" fo that probably there were many of that name; and thus both claffical and Oriental writers may have adhered to the truth in their various accounts. The above quotation from the Afiatic Refearches is of confiderable importance in illustrating a subject, upon which I am, at Vol. II. length,

[·] Afiat. Refearch. vol. i. p. 349.

⁺ Plinii Nat. Hift. lib. xxx. c. 1.

Warburton is decidedly for the high antiquity of Zareafter, and calls all that Prideaux, and confequently Hyde, has written about him, "an entertaining flory, a mere fable." Div. Leg. vol. ii. p. 9, fecond edition.

length, about to enter; one of the most perplexing and difficult in the whole extent of Indian antiquities.

By way of introduction to it, let me remark, that the principal fire-temple, and the usual residence of Zoroaster and of his royal protector Darius Hystaspes, was at Balkh,* the capital of Bactria, the most eastern province of Perfia, fituated on the north-west frontiers of India, and not very remote from those mountains, which, in Major Rennel's fmall map, are diftinguished by the name of Hindoo-Ko, and which, in classic language, are the true Indian Caucasus. Stationed so near the country of the venerable Brachmans, this bold and judicious reformer would hardly fail of vifiting those renowned fages, and of improving his own theological fystem by the addition of whatever was valuable in the Brachmanian inflitutes of religion. In reality, we are told, by one of the later historians of the Roman empire, that Hystaspes + himfelf,

[.] Hyde's Hift. Relig. Vet. Perf. czp. xxiv. p. 320.

[†] Hystaspes, qui quum superioris Indiæ secreta sidentius penetraret, ad nemorosam quandam venerat solitudinem, cujus tranquillis silentiis præcelsa Bracmanorum ingenia potiuntur; eocumque monitu rationes mundani motus et siderum, purosque sacrorum ritus, quantum colligere potuit, eruditus, ex his

himself, and most probably not unattended by the illustrious Archimagus, did personally penetrate into the fecluded regions of Upper India, and, in difguife, vifited the deep folitudes of the forest, amidst whose peaceful fhades the Brachmans exercife their lofty genius in profound speculations, and that he was there instructed by them in the principles of the mathematics, astronomy, and the pure rites of facrifice. These various doctrines, to the utmost extent of their inclination to impart, and of his own abilities to retain, he afterwards taught the Magi, all which, together with the science of divination, those Magi traditionally delivered down to posterity through a long fuccession of ages. That part of India which Hyftaspes visited was, doubtlefs, Cashmere, where, in all probability, the genuine religion of Brahma flourished longest without adulteration, while its purity, in the fouthern regions, could hardly fail of being polluted, and its spirit of degenerating, amidst the continual influx of foreign nations and of exotic superstitions, from Egypt, Arabia, and all the neighbouring commercial nations.

I 2 But

que didicit, aliqua fenfibus magorum infudit : que illi cum disciplinis presentiendi futura, per fuam quisque progenium posteris etatibus tradunt. Ammiani Marcellini, lib. 13.

But are there any vestiges remaining in this happy and feeluded region of an original fyftem of devotion, more refined, more benevolent, more confistent with the professed original principles of Brahma's benign religion, than exists any where else in India? If there should exist any such vestiges of the first legislator's genuine and fublime theology, will they not greatly corroborate the arguments I have advanced, principally on the authority of Sir William Jones, Mr. Wilkins, and Mr. Holwell, of the corruptions introduced into the ancient religion of India by subsequent legislators and defigning priests of later ages? From the high and respectable authority of Abul Fazil, who, several times, visited, together with the Emperor Akber, that delightful country, and therefore wrote not from the reports of others, but as an eye-witness, I can answer that such vestiges actually do exist there. In the account which the Ayeen Akbery gives of Cashmere, there is a very interesting relation inferted of a most amiable race of religious devotees, who are denominated REY-SHEES,* and who are faid to be the most respectable people of that country. These people, according to Abul Fazil, do not fuffer

^{*} See the account of them in the Ayeen Albery, vol. ii. p. 115. .

fuffer themselves to be settered by traditions, they revile no sect that may differ from them in religious opinions, nor do they meanly supplicate alms like the wandering mendicants of the south. They abstain from all animal food; they devote their lives to unblemished chastity; and they make it their constant and benevolent employment to plant the road with fruit-trees for the refreshment of weary and fainting travellers. Now the word Reyshee signifies, in Sanscreet, a holy person; and, in the principles and conduct of these devotees, may surely be traced the mild, the beneficent, the uncorrupted, religion of the GREAT BRAHMA.

It may fairly be concluded, that Hystaspes was incited, by the representation of his friend and counsellor Zoroaster, to pay this private visit to the Brachmans, and that Zoroaster himself had frequently before visited that "nemerosam selitudinem" in which, Marcellinus informs us, they dwelt. It is a conclusion equally fair, that the latter zealously copied the manners and habits of living of those whose austerity and whose wisdom he so ardently admired. When, therefore, we find Zoroaster, as he is represented by Porphyry, in a passage which I shall presently

give at length, previously to his assuming the prophetic character, retiring to the gloom of a lonely CAVERN in Media, and ornamenting that cavern with various aftronomical symbols and mathematical apparatus, displaying and imitating what he had there probably feen and been instructed in, " Bracmanorum monitu, rationes mundani motus et fiderum;" when we find him in Perfia, reviving, with additional fplendour, the ancient, but decayed, worship of the sun and of FIRE; especially when, upon a more-full investigation of the matter, we discover in the mountainous regions of India, which he visited, that the EXCAVA-TIONS were equally numerous and prodigious; and, in the very midst of those mountains, according to the express words of Abul Fazil,* who had, in all probability, personally examined them in his various excursions with Akber into that neighbourhood, that no less than " twelve thousand recesses were cut out of the folid rock, all ornamented with carving and plaster-work, and remarkable for three aftonishing 1DOLS; the first, representing a man eighty ells in height; the fecond, a woman fifty ells in height; and the third, a gigantic child fifteen ells in height:" when

^{*} Ayeen Akbery, in the Soebah of Cashmere, vol. ii. p. 208.

we read that in Cashmere, after the defection of the inhabitants from their original fimplicity and purity of worship, there were no less than " 700 places where CARVED figures of a ferpent," that ancient hieroglyphic emblem of the fun, were worshipped: - on a due confideration of all these circumstances united together, it is impossible to avoid suppofing, that, at the period alluded to, the fecret mysteries, both of the Hindoo religion and the Hindoo sciences, were performed and taught in the gloom of SUBTERRANEOUS retreats, hollowed for that purpose out of the ROCK, and decorated with fimilar fculptures and ornaments; that the mystic rites performed in them were those in honour of elementary FIRE, and that the prevailing religion of the nation was the worship of the sun. This appears to me a more certain clue to guide us through the labyrinth into which we are entering than any other yet devised; and with this clue I shall proceed to the immediate confideration of those curious remains of ancient industry and genius, which have, through fo many ages, excited the admiration of travellers and exercifed the speculations of the learned, in the neighbourhood of the English fettlements at Bombay.

SECTION III.

The Coverns of Elephanta and Salfette described, as well from the most esteemed printed Accounts as from authentic Documents transmitted by living Witneffes to the Author. - The Statues with which they are decorated are, in part, symbolical Representations of the supreme Deity and bis Attributes; and, in part, deceased Rajabs exalted to divine Honours for their Virtue and Bravery. - The Species of Superstition anciently practifed in these Cavern-Pagodas inquired into. - That Worship of a physical Nature. - Exemplified in the constant Appearance of the Phallus, or Lingam, in all the Sacella, or more fecret Shrines. - And deeply connected with the Sabian or sidereal Superstition, so widely diffused in the most early Periods over the Greater Afia.

INGENUITY hath been tortured, and conjecture exhausted, by fruitless endeavours to discover at what periods the stupendous caverns,

caverns, at ELEPHANTA and SALSETTE, were hewn from the native rock; the purpoles to which they were originally devoted; and the meaning of the hieroglyphic figures sculptured on their walls. While fome writers have imagined them to have been places of retreat and fecurity from an invading enemy, others have confidered them as the stony fanctuaries of a religion no longer existing; while others, again, with still less probability, have supposed them to have been the hallowed receptacles of the ashes of the more illustrious dead. English and French writers have equally exerted their critical acumen upon this abstruce subject; but both with success by no means proportionate to the labour beflowed in the investigation. M. D'Ancarville* is willing to ascribe them to Semiramis, when the invaded India, whose king, he fays, opposed her at the head of elephants covered with mail, and of troops armed with lances, fimilar to those on the walls of Elephanta; and he quotes Diodorus Siculus to prove that the caused such memorials of herself to be constructed. According to Dr. Fryer, the first Englishman who gives any account of these caverns, the honour of excavating them has

has been contended for in favour of Alexander the Great by those who thought his army alone equal to the achievement of so arduous an undertaking; and it is not a little remarkable, that a large and spirited sigure of a horse, hewn out of the rock on the island of Elephanta, is really called the borse of Alexander.* The third opinion, and full as rational as any of the romantic ones before mentioned, is that which Ovington and other travellers affert the natives themselves entertain concerning their fabrication; viz. that they were the work of giants and genii in the earliest ages of the world!

As these subterraneous recesses are admitted to be of the most profound antiquity; of such profound antiquity, indeed, that we are unable to obtain any light concerning the particular æra of their fabrication, either from books or from tradition; yet, as there exists at the same time the strongest reason for supposing them to have been originally applied to religious purposes, it seems to follow, as a necessary consequence; that in them was practised the most ancient superstition known to have

See the account communicated to the Society of Antiquaries, by Alexander Dalrymple, Efq. in the Archaeologia, vol. vii. p. 324.

have flourished in Hindostan, and that superstition has been demonstrated to have been the worthip of the SOLAR ORB and of FIRE. But, with the principles of their theology, we have observed, were deeply blended those of a science which was in that remote period the infeparable concomitant of every theological system, and which, by some intelligent writers, is supposed to have had its origin, and, by all authors, to have arrived at early maturity, in that country. M. Bailly, indeed, in his elaborate treatife on the aftronomy of the ancients, cedes the palm, contended for in honour of India, to Persia, but only for the space of about a century in priority; and, therefore, the general argument remains in force fufficient to justify my afferting, that the principles of that science were once invefligated and taught in these caverns with all the zeal which inspired its most enthusiastic votaries; while the worthip of the folar orb and of elementary fire was celebrated in them with all those peculiar appendages of pomp and folemnity, which ever occompanied, and, above all others, diffinguished, that splendid Superstition. Without anticipating the arguments, which I intend to adduce in support of this affertion, I shall first present to the reader.

reader, as far as verbal description can avail, (and forry am I that it is not in my power to accompany that description with explanatory engravings adequate to the importance of these antiquities,) a general view of the caverns and of the sculptures they contain. I shall afterwards proceed to that more particular examination of fome of them, upon which I have hazarded certain conjectures concerning the use to which the former were applied, and concerning the probable mean-

ing of the latter.

These rocky shrines, the formation of which Mr. Grofe* supposes to have been a labour equal to that of erecting the pyramids of Egypt, are of various height, extent, and depth. They are partitioned out, by the labour of the hammer and the chiffel, into many feparate chambers; and the roof, which in the pagoda of Elephanta is flat, but, in that of Salfette is arched, is supported by rows of pillars of great thickness, and arranged with much regularity. The walls are crowded with gigantic figures of men and women, engaged in various actions, and portrayed in various whimfical attitudes; and they are adorned with feveral evident fymbols

[.] See Grose's Voyage to the East Indies, in 1750, p. 92.

fymbols of the religion now prevailing in India. Above, as in a fky, once probably adorned with gold and azure, in the fame manner as Mr. Savary lately observed in the ruinous remains of fome ancient Egyptian temples,* are feen floating the children of imagination, genii and dewtahs, in multitudes; and along the cornice, in high relief, are the figures of elephants, horses, and lions, executed with great accuracy. Two of the principal figures at Salfette are twenty-feven feet in height,+ and of proportionate magnitude. the very buft only of the triple-headed deity, in the grand pagoda of Elephanta, measures fifteen feet from the base to the top of the cap; while the face of another, if Mr. Grose, who meafured it, may be credited, is above five feet in length, and of corresponding breadth. Many of these figures, however, have been deeply injured by the fury of Mohammedan and Portuguese invaders of Hindoftan. When the latter first arrived in India, in their rage against idolatry, they attempted

^{*} See Savary's Letters on Egypt, vol. i. letter 30, and in p. 451 of the English edition, printed for Robinson, in which the references to classic authors are more accurately made than even in the original French, and this, therefore, is the edition constantly referred to.

[†] See Archwologia, vol. vii. p. 334-

tempted to annihilate what they thought were the objects of pagan devotion, by plastering over these valuable remains of antiquity: when the Marattas, afterwards, retook Salfette, to remove that plaster, they fired off some cannon in the pagoda, which unfortunately, together with the plaster, brought down fome of the bas-relief. Observing this effect of the discharge, they defisted, and with hammers cleared the figures of their degrading investment; but not without doing material injury to the hands and feet of feveral. The entrance into most of these caverns is now obstructed by grass and high reeds, which must be burnt before a secure passage can be obtained: they are the refort of the cattle who feed upon that island when annoyed by the intense beams of the sun or wintry tempefts, and are not unfrequently vifited by wild beafts and venomous reptiles. Captain Hamilton acquaints us, that, upon his entrance into the pagoda of Elephanta,* he discharged a pistol, on purpose to drive away those dangerous visitants, and that, at the found, a huge ferpent, fifteen feet long and two feet thick, issued from his dark recess, which compelled him and his companions to make a precipitate retreat.

[.] Hamilton's Voyages to the East Indies, vol. i. p. 238.

retreat. One would have supposed that the construction of such astonishing works, which have been called the eighth wonder of the world, would have fixed, in any country, an æra never to be forgotten, fince not only a long period of years must have been consumed, but an infinite number of hands must have been employed, in scooping out from the living rock such extensive caverns, and forming, by the flow operation of the chiffel, fo many and fuch massy columns. It is, however, very remarkable that no ferutiny however rigid, no inquiry however diligent, either among the neighbouring Brahmins or those living upon the continent, celebrated for learning and penetration, could ever fucceed in discovering the immediate sovereign who fabricated them, nor the exact epoch of that fabrication.

Of the various descriptions of these excavations, all of which lie before me, from the first by Linschoten, in the sixteenth century, to the latest published in the seventh volume of the Archæologia in 1785, those given by Ovington and Mr. Hunter seem the most accurate among the English travellers, and those of M. Anquetil de Perron and M. Niebuhr among the foreign visitants. From these authors principally, but with occasional references to others, is the following more particular account of them selected. — Let us be-

gin with Elephanta.

Ovington informs us, that Elephanta* is a fmall island, three leagues distant from Bombay, and is thus denominated from the statue of a large elephant cut out of the rock, of which the island is composed, conspicuously standing on the fouth shore, and which, in the opinion of another traveller, + (Hamilton,) fo nearly refembles a real elephant, that, at the distance of two hundred yards, " a keen eye might be deceived by the fimilitude." Ovington also describes a horse, carved in the fame rock, " fo lively, and with fuch a colour and carriage, that many have fancied it a living animal." An engraving of each is given in the volume of the Archæologiat cited above; but the elephant, according to Mr. Hunter, a more accurate inspector of things, is fplit in two, and there are visible marks of its having been done by gunpowder, probably by the same barbarians who mutilated the figures in the pagoda adjoining. The word pagoda

Elephanta, according to De Perron, is called by the natives Gallipouri.

⁺ Hamilton, vol. i. p. 241. † Archaologia, vol. vii. p. 287.

pagoda is formed from the Persian word pout, fignifying idol, and gbada, temple. Thus pagoda means a temple of idols, and, through this interpretation, we come immediately at the meaning of the hieroglyphics.

This aftonishing PANTHEON of the gods, that is, of the deified beroes and princes of India, presents itself about half way up the steep ascent of the mountain, from whose stony bofom it is excavated. Ovington states the dimensions of this temple at about 120 feet fquare, and the height at 18 feet, and Niebuhr* agrees with Ovington in respect to the height and breadth. The principal entrance is from the north. The enormous mais of folid rock above is supported by four rows of pillars of beautiful proportion, but of an order in architecture totally different from that of Greece and Rome. Each column stands upon a square pedestal, and is finely fluted, but, instead of being cylindrical, gradually bulges out towards the centre. The capital is also fluted, and is described by Mr. Hunter as having the appearance of a cushion pressed flat by the weight of the superincumbent mountain. Over the tops of these columns there runs a stone ridge cut out VOL. II.

* Sa longueur est d'énviron 120 pieds, et sa largeur à peu près de même. Voyage en Arabie, tome ii. p. 25.

of the rock, refembling a beam, about a fort in thickness, richly adorned with carved work. Along the fides of the cavern are ranged those mighty colossal statues before-mentioned, to the number of forty or fifty, each of them twelve or fifteen feet in height, of very exact fymmetry, and, although they are as round and prominent as the life, yet none of them are entirely detached from the main rock. Some of these figures have on their heads a kind of helmet of a pyramidal form; others wear crowns rich in devices, and splendidly decorated with jewels, while others difplay only large bushy ringlets of curled or flowing hair.* Many of them have four hands, many have fix, and in those hands they grasp fceptres and shields; the symbols of justice and the enfigns of religion; the weapons of war and the trophies of peace. Some of them have aspects that inspire the beholder with terror, and, in the words of Linschoten, are distorted into fuch "horrible and fearfull formes that they make a man's hayre stand upright;" others are distinguished by a placid serenity and benignity

Niebuhr has started rather a singular idea upon this subject.
 On pourroit prendre pour une perruque ce que l'une d'elles à sur la tête, et conclure de là, que les Européens ne sont pas les premiers inventeurs de cette coissure." Voyage en Arabie, tome si. p. 29.

benignity of countenance; and others betray evident marks of deep dejection and inward anguish. The more conspicuous figures are all gorgeously arrayed after the Indian fashion, with heavy jewels in their ears, with fuperb collars of precious stones, with belts sumptuoully wrought, and with rich bracelets on their arms and wrifts. To enter, however, upon a particular description of each figure falls not within the compass either of my intention or of my abilities: the attempt, if practicable, would far exceed the limits within which I have professed to circumscribe this work. I shall confine my observations therefore to two or three of them, which, being more strikingly prominent, particularly attract our notice, and merit more attentive examination

The first of these is that enormous buft, which is fituated on the fouth fide, and directly faces the main entrance of the cave. Mr. Hunter describes this buft as having four heads joined behind the ears; one presenting itself full in front, two in profile, and the fourth concealed from the view by its fituation behind that in front. This, however, is an affertion directly contrary to every account I have yet feen, except Mr. Hamilton's, whose

observations K 2

observations the serpent's appearance prevented from being very correct; and if Mr. Hunter exerted, in this instance, his usual accuracy of examination, it is a circumstance of great perplexity. M. Niebuhr, however, the most faithful delineator of these antiquities, mentions but three heads, and particularly fpecifies this buft* as exhibiting the representation of the grand triple deity of India, Brahma, Veeshnu, and Seeva. I consider the judgment of Niebuhr as corroborated in the highest degree even by Mr. Hunter's own description of the fymbols and aspect of the three personages who compose it. Let us, however, first consider his account of the dimensions of the august visage in the front. We shall foon perceive, from its aftonishing depth and breadth, that it was intended for the image of the supreme presiding deity of this hallowed retreat, and that the sculptor wished to impress us, by the superior magnitude of the buff only, with the most awful conceptions of his unrivalled pre-eminence in every other point of view. The face in the front measures above five

T

^{*} Cette figure principale est un buste à TROIS TETES, qui apparemment devra représenter Brahma, Vistau, et Mades, ou quelqu'autre divinité, à l'honneur de laquelle on ait bâti ce temple. Voyage en Arabie, tome ii. p. 26.

five feet in length, and the nofe, alone, one foot and a half; the width, from the ear only to the middle of the nose, is three feet four inches; but the stupendous breadth of the whole figure, between the shoulders, expands near twenty feet. The towering pyramidal cap of this central head has, in front, a very large jewel; and the caps themselves of all the three are exquifitely wrought. Round the neck of the fame figure is suspended a most magnificent broad collar, composed of precious stones and pearls. This face, Mr. Hunter adds, has a drowfy but placid appearance, which may be supposed the exact description of that absorbed state which, it has been before remarked, constitutes the supreme felicity of the Indian deity. The amiable attribute of the preserver Veeshnu is doubtless intended to be represented by the face on the right, which is arrayed in fmiles, and looks enamoured on a bunch of flowers, perhaps the facred lotos, which its left hand holds up to view. If ever, on the other hand, the dreadful attributes of the destroying god Mahadeo were accurately portrayed, are they not evident in the monstrous, distorted, and terrific, features of the remaining aspect? The eye-brows of that face are contracted into frowns, the skin of

K 3

the nose is drawn upwards, and the alce nostri distended, expressing contempt and indignation. The face, too, is darkened by whilkers, which the others have not, and the tongue is violently thrust out between the teeth. The right hand of this dreadful figure grasps a large hooded fnake, which it holds aloft and furveys with a stern look. The fnake is about a foot in thickness; and the middle finger of the hand, which grasps it, Mr. Hunter asserts to be three feet and half in length. Another hand, which is now broken off, appears to have had a fnake of the same hooded and enormous kind. If, upon future and more accurate examination, this should be discovered to be a quadruple-faced divinity, in that cafe to whom can it possibly point, but to BRAHME himself, the GREAT ONE, who in the Asiatic Researches* is represented with four majestic aspects; as the god who not only knows, but observes, all things? If the reader will trouble himself to look into the fourth and fixth plateof Niebuhr, he will observe two figures, decorated in a very conspicuous manner with the zennar, or facred cord of three threads, which the Brahmins wear: and this circumstance, added

^{*} See an eagraving of Brahma in the Afast. Refearch. vol. i. p. 243.

⁺ Opposite pages 25 and 27.

added to what has been just afferted, is a sufficient refutation of that ill-founded opinion of Mr. Grose, and other superficial observers, that the species of devotion, now prevailing in Hindostan, was different from that originally bractifed in the pagoda of Elephanta. If the head of this buft, however, should, on farther inquiry, prove to be of a quadruple form, the argument will by no means be overfet; for, both in plate the fifth and in the fixth, adjoining to the elephant's head, the triple divinity is clearly feen, feated on a throne ornamented with geefe, the favourite birds of Sarifwatty, the wife of Brahma. The elephant's head had, most probably, the now-effaced body of Ganesa affixed to it; for, thus is that body ornamented in the engraving of that deity in the Afiatic Refearches, to which the reader may advert; and it was judiciously placed near the Supreme Being, fince, both in that authentic volume and in Holwell,* we find that it was the peculiar office of Ganefa to present to the Deity all the oblations and all the devout addresses of mankind to their Creator. The elephant's head is the emblem of fagacity, and he is styled the god of prudence K 4

* See Afiatic Refearches, vol. i. p. 227: and Holwell, feeond part, p. 142.

dence and policy. Hence even worldly business of any importance is always commenced by an ejaculation to Ganesa, and he is invoked at the beginning of most Indian books, an instance of which occurs in the Heetopades, translated by Mr. Wilkins, which opens with, Reverence to Ganesa. The two majestic wholelength figures, on each side of the grand bust, are both adorned with the thread of Brahma, and are probably intended to represent the priests of that deity. M. Anquetil de Perron, I observe, calls them subdars.

In a temple of Indian deities, who would have expected to have found an AMAZON? Yet, farther on to the left of the faid bust, amidst a group of thirty uncouth statues, conspicuously projects one to whom most writers, and, among them, both Niebuhr* and Hunter, have united in giving that name; and truly she is an Amazon, if the general derivation of that word be just; for, she has no right breast at all, while the left is very large and

La figure principale de cette grouppe est une femme, qui n'a qu'une mammelle, et qui, peut-être, doit représenter une Amazone, P. 27.

Amazon is supposed to be formed from the privative a and '

pulse. mamms, or breast; for they used to cut off the right

breast of the female.

and globular. She has four arms; the right fore-arm rests upon the head of a bull, the left fore-arm hangs down; but what the hand once contained is mutilated, and cannot now be distinguished. The hand of the hinder right-arm grasps a hooded snake; the left, a round shield, regularly convex on the outside, which the statue turns towards itself. As we have exploded the idea of Semiramis having constructed these caverns, from what quarter could the idea of a figure, like this, enter the head of an Indian sculptor? Herodotus acquaints us, that there were Scythian Amazons; and, however chymerical the system may appear. I cannot but suspect that it arose from that connection, which, in very early periods, feems to have existed between the two nations of India and Scythia. Mr. Bryant has indeed combated all the affertions of the ancients concerning the existence of so extraordinary a race; he infifts that the people called Amazons were Cuthite colonies from Egypt and Syria; and, in corroboration of his affertions,* has offered an ingenious derivation of the word Amazon, which he would deduce from Zon, the Sun, the national object of worship among that people. Allowing this derivation of the

Analysis of Ancient Mythology, vol.iii. p. 463.

word Amazon to be founded in propriety, her leaning upon the head of a bull, the animal facred to the Sun, will appear peculiarly just and characteristic; while the various crowd of mutilated figures around may be supposed in the attitudes of devotion, and adorned with the implements of facrifice. The whole, however, is an enigma, whose real meaning, from the general mutilation prevailing throughout the figures, will never probably be solved.

In the pagoda of Elephanta there is another very fingular and portentous figure, which forcibly arrests the attention of every observer. Its features are distorted and furious, like those of Mahadeo before-described, and its limbs are carved in a gigantic style. The mouth is wide open, and the whole aspect is inexpreffibly favage and terrible. This monstrous statue has eight arms, only fix of which are perfect. The two uppermost of those that remain are extended to their full length, and, over its head, fupport a wide curtain, or canopy, upon which are fculptured various figures in a posture of adoration. One of the right hands grasps a drawn sabre, the other fustains by the thigh an affrighted infant, with the head hanging downwards, whom the relentless monster seems about to destroy. We

are informed, as well by M. Niebuhr as Mr. Hunter, that, from this circumstance, many travellers have fancied this piece of mythologic sculpture to have been intended for a reprefentation of the judgment of Solomon; a conjecture, however, which they both confider as totally destitute of foundation. Of the two left hands, the uppermost is charged with a bell, which, fays Mr. Hunter, is known to be an instrument constantly used in the religious ceremonies of the Gentoos; and the inferior supports what Niebuhr* thinks a bason to catch the blood of the murdered infant, but what Mr. Hunter affirms,+ at the time of his visit to Elephanta, actually contained the mutilated figure of a child, with its face averted from the larger figure, and exceedingly bent; so that the head, which it now wants, must, when joined to the body, have hung back very low, and have exhibited a frightful spectacle. The statue is gorgeously dreadful, with a rich collar of pearl, and bracelets of precious stones to every arm, and is encircled with a chain of death-beads, which evidently point out to us once more the destroying power of India, and the

Le plat devroit fignifier, qu'il y a reçu le fang des enfans massacrés. P. 30.

[†] In Archæol. vol. vii. p. 294.

the husband of that CALLEE, the wild music of whose priests, at one of her festivals, brought instantly to the recollection of Sir William Jones the Scythian measures of Diana's adorers in the splendid opera of Iphigenia in Tauris, exhibited by Gluck at Paris. Above and below this coloffal statue are several smaller figures, all of whom have horror strikingly painted upon their countenances. To conclude the difgusting similitude, the veil, or canopy, in which the statue seems to conceal itself from view, may, with justice, be confidered as figurative, not only of the gloomy and ferocious nature of the rites peculiar to that vindictive deity, but of the awful feafon in which they were performed; the darkness of that night, which, Mr. Holwell has informed us, is univerfally devoted to the worship of Callee throughout Hindostan.

If the facred zennar of Brahma, conspicuous upon so many of the figures engraved in the plates of Niebuhr and the Archæologia; if these striking sculptures of the gods, at present adored in India; if the positive affertion of Niebuhr, † that he himself saw the islanders come and pay their devoirs to the deities of

this

^{*} Afiatic Refearches, vol. i. p. 266.

[†] Voyage en Arabie, tom. ii. p. 32.

this temple; will not convince those of their error, who insist* that a species of devotion, totally different from that at this day prevailing in India, was anciently practised in these caverns, let us enter, and survey the secret fanctuary of this magnificent temple, and let us examine what internal evidence that survey may afford to determine the question.

Previously to that survey, however, it is neceffary that the reader should be acquainted with another predominant feature in the Hindoo religion, upon which I have not as yet touched, because, in the first place, the subject is not the most inviting, and, in the fecond place, because it does not appear to have any foundation in the original Vedas attributed to Brahma, which, throughout, inculcate a reverence for FIRE, as the purest fymbol of the divinity in the whole extended circle of nature. Imaginations less pure have conceived, and priefts less absorbed in mental abstraction have elevated in the very temples of India, a very gross representation of the great celestial Aquispyos: they have instituted a **fpecies**

[•] Mr. Grofe, who visited this part of India in 1750, with equal presumption and ignorance, afferts, "that these sculptures bear not the least shadow of allusion to the history, manners, or worship, of the Gentoos,"—Grose's Voyage to the East Indies, p. 97.

species of devotion at once degrading to the Creator and dishonourable to his creatures. This species of devotion made an early and rapid progrefs among the inferior casts, but particularly infeSted the inhabitants of the Peninfula, whose manners, like the constitution of people fituated in warmer climates, feem to have been fooner relaxed and depraved than those of their brethren in the northern and less enervating regions of Upper India. I will not affirm, though it is far from being improbable, that these indecent rites were imported into that Peninfula from Egypt, where the first institution of the worship of Ithipballic images* is afferted, by Diodorus Siculus, to have taken place upon an occasion which I shall hereafter explain, and whence, Herodotus+ acquaints us, those rites were carried by Melampus into Greece. For the present, I shall content myself with informing the reader, on the authority of Mr. FORSTER, who has written a concise but elegant treatise concerning the mythology of the Hindoos, that all the numerous fects, into which they are divided, are ultimately included under two grand divisions; the one denominated the Veefbnu Bukbt, and the other the Seeva Bukbt.

The

[·] Diod. Sic. lib. i. p. 15.

The followers of the first, Mr. Forster says, are distinguished by marking the forehead with a longitudinal, and those of the second with a parallel, line. As in the great temple of Jaggernaut, in Orissa, all distinctions were laid aside, and devotees of every cast, though at other times strictly prohibited from eating together, were permitted to take their food in common: so it is not improbable that, at Elephanta, the two great sects, distinguished by the name of Veeshnu and Seeva, might forget their accustomed animosity, and worship their several deities with equal fervour.

At the west end of this grand pagoda is a dark recess, or SACELLUM, twenty seet square, totally destitute of any external ornament, except the altar in the centre, and those gigantic sigures which guard the four several doors that lead into it. These sigures, according to Niebuhr, are naked, are eight in number, stationed

^{*} This valuable little book is entitled, Sketches of the Mythology and Customs of the Hindoos, and was obligingly lent me, with some other original publications of an Indian kind, by the secretary of the East-India Company. It was printed in 1785, but never published. A publication has lately appeared under a similar title, but on a more extensive scale, by Mr. Cranford, an elegant and authentic writer, whose observations are, in general, the result of personal investigation upon the spot.

stationed on each fide of every door, and are of the enormous height of thirteen feet and a half; they are all finely fculptured in high relief, and appear as if starting from the wall to which they are attached. Their heads are decorated in a manner fimilar to the other statues: they have rich collars round their necks, and jewels of a vast fize in their ears. Of the striking attitude of one of those statues, which remains most entire, Mr. Hunter has recorded the following particulars: that the whole weight of the figure feems to rest upon the right leg, while the knee of the left is fomewhat bent, the right humerus hangs downward parallel to the body, and the forearm is bent in fuch a manner that the hand is opposite to the navel, the palm is turned upwards and fuftains a GLOBE, and the fingers. are bent backwards in a style that admirably represents, or rather makes the spectator feel, the weight of the ponderous body they fupport. He adds a judicious remark, that the people, whoever they were, that carved these figures, must have made considerable progress in the art of statuary, so accurately to have observed, and so successfully to have expressed as in many instances they have, the alteration which the form of the limbs undergoes

dergoes from muscular action and external impulse, as well as the various effects of mental fensation upon the human countenance. These formidable guardians of this facred recess point out the use to which it was applied and the veneration in which it was holden. It was devoted to the most facred mysteries of their religion; but our pity and abhorrence are at once excited by the emblem under which they represented, in this recess, the fupreme Creator. It is indeed an emblem of deity, which was common in the ancient ages of the world, and which, it has been observed,* is but too visible at this day in the various pagodas and paintings of Hindostan. It is, in short, the Φαλλος of the Greeks, the PRIAPUS of the Romans, and in India it is called the LINGAM divinity, by which they mean to express the power of the first creative energy, by whose operations all nature is produced. 'According to M. Sonnerat, + the professors of this worship were of the purest principles and the most unblemished conduct; and, however offensive the idea may prove to Europeans, happily educated under different VOL. II. impressions,

^{*} Afiatic Researches, vol. i. p. 254.

⁺ Sonnerat, Voy. aux Indes Orient. vol.i. p. 118.

impressions, it seems never to have entered into the heads of the Indian legislator and people, that any thing natural could be grosly obscene, "a singularity," observes Sir W. Jones, "which pervades all their writings and conversation, but which is no proof of depravity in their morals!"

A fear of offending the delicacy of my readers would induce me to decline faying a word more on the subject of a devotion, at which modesty cannot help revolting; but as, in obedience to the stern mandates of truth, I am reluctantly compelled to give the particulars of this recess, the real purpose of which, and the kind of devotion practifed in it, Mr. Hunter,* from his calling the altar a maufoteum, feems not even to have conjectured, I Thatl take the liberty of relating those particulars in the words of Mr. Dalrymple: that account, extracted by Mr. D. from the journal of Capt. Pyke, observes that, " all within was open and plain, except that in the centre stood a fquare low altar, on which was placed a large polished stone of a cylindrical form, standing on its base, but the top was round or convex." Physics and mythology, united together, at once formed the hypothefis

pothelis and fabricated the representative emblem. An attentive furvey of the powers of nature and her various modes of operation originally gave birth to that hypothesis; for, according to the philosophy of India, " to destroy is only to generate and reproduce in another way." Hence the god of destruction in this country is holden to prefide over generation, as a symbol of which he rides upon a white bull. The name and the various attributes of MAHADEO justify our denominating . him at once the Magnus Divus, (which is the literal translation of Mahadeo,) the Jupiter Ultor and the Jupiter Genitor of the Hindoos. His confort is Bhavanee, the Indian Venus, and, in truth, she has produced as many subordinate deities in India as ever Venus did in Greece or Rome. It may here be remarked, that all the Indian deities have wives; by which, when the characters are purely mythological, we are to understand the active powers of their lords; but SEETA, the wife of the great incarnate god RAM, whose unfortunate adventures during her captivity by the giant RAVAN, king of Lanca, engross fo large a share of the paintings and ancient historical poems of Hindostan, was probably. a real personage, the wife of a rajah of the fame L 2

fame name, after his death dignified with divinity for the bravery of his exploits against the domestic tyrants and foreign invaders of his country.

In metaphyfical speculation alone, I have observed, it is possible to account for the strange species of devotion above-mentioned, and that ftill stranger representation of deity; but it is equally possible, that they might have originated in the perverted principles of a mind depraved by fenfual gratifications, and that the argument, used in the defence of them, might be posterior to the establishment of the fuperstition. Reluctant as I am to appear to follow the example of those who labour to deduce from Egypt every ancient inexplicable custom and every obscure religious rite of India, yet, of this superstition at least, fo diametrically opposite to the tenor of the Vedas, and so directly congenial with the ITHIPHALLIC rites of Egypt, which in fucceeding ages were fo widely diffused throughout the earth, I am inclined to think those rites were the grand prototype. The early annals of the latter country record the circumstances that gave rise to the institution; and, however deeply blended those circumstances were with their mythologic fables, yet, in an Akene investigation

investigation of this nature, it would be improper wholly to omit taking notice of them.

Diodorus Siculus* then relates, that Osiris, after his return from the conquest of Asia, was flain by his jealous and enraged brother Typhon, who, after cutting the mangled body into twenty-fix pieces, dispersed them in various parts of Egypt. Isis, his affectionate queen, diligently fought for the disperfed limbs, which after a long fearch she found, and committed to the care of the priefts, instituting at the same time sacred rites in honour of her murdered lord. In memory of this eager and tedious fearch of the difconfolate queen, at every celebration of the myftic rites of Isis and Ofiris, a fimilar fearch, with many and bitter lamentations, was affected to be made by the priefts, and hence. that expression of "Nunquam satis quæstus Ofiris." Not all the anxious inquiry of Ifis, however, could for a long time discover the genitals of Ofiris, which Typhon had thrown into the Nile. At length the portion of Ofiris missing was found, interred with the utmost folemnity, and, in memory of this recovery, Phalli, or poles, (for, that is the meaning of the word Phalli,) with figures of the male pudenda

Diodori Sicali, lib. i, p. 15.

pudenda fastened to them, were constructed, and ever after carried about in folenin procession during the continuance of the festival. Athenœus acquaints us,* that Ptolemy Phitadelphus, at one of those magnificent festivals, displayed to the Egyptians a Phallus of gold, richly painted and adorned with golden crowns, a hundred and twenty cubits in length, with a star of burnished gold upon the top, the circumference of which was fix cubits. This was borne aloft, like the other idols, on a fplendid car, and, like them, received homage from the gazing crowd. This atrocious outrage against decency, this abominable mockery of every thing facred, under the infulted name of religion, from Egypt fpread its infection through all the kingdoms of Afia, and was carried in Greece to fuch a pitch of infamous refinement, that, in celebrating the orgies of Bacchus, according to Herodotus,+ they fabricated certain obscene images, a cubit in height, fo artificially contrived with nerves, that the aidolog, equal in magnitude to the rest of the body, might be moved at pleasure, and these images the women (those shameless φαλλοφεραι) carried about in procession, singing all the time the praises

of Bacchus, and dancing to the found of the flute. He then adds, that it was Melampus who first introduced among the Greeks the facrifices in honour of Bacchus, the pomp of the Phallus, and all the other ceremonies of that Egyptian fuperstition. The vestiges of this ancient and nefarious idolatry are evidently traced in the worship of BAAL-PEOR. so frequently and loudly inveighed against by the prophets in various parts of the facred writings. The word Boal-Peor is, according to Bishop Cumberland, derived from two Chaldee primitives, the former fignifying God, and PEOR, or PAYAR, denudare, which he would literally translate the god PRIAPUS,* that obscene deity, born and venerated at Lampfachus, whence he is often so denominated, and concerning whose history and office the reader, if he chooses, may consult Horace, + Ovid, and the other licentious Roman poets.

I am unwilling to dwell upon this indelicate topic, which however is intimately connected with the subject of which I treat; but there appears to be so striking a resemblance L 4 between

[.] Comberland's Sanchon atho, p. 75.

⁺ Hor. lib. i. fat. viii. v. 3.

between a passage in a profane writer,* who relates the cause of the first institution of the festival, called PHALLICA, at Athens, and one in the facred volumes, that the curious reader will, I am confident, pardon the protraction, especially as I shall afterwards prove, that a custom, fimilar to that alluded to, at this day exists in India. Pegasus, a native of Eleutheris, in Bæotia, having brought to Athens fome statues of Bacchus, was treated by the Athenians with the utmost contempt and ridicule. The deity, indignant at the infult, in revenge, fent among them an epidemic difease of a nature that peculiarly affected those parts which modesty forbids to name. On confulting the oracle upon the best method of preventing the farther extension of so grievous a malady, they were recommended publicly to receive Bacchus into their city in all the pomp of his worship. The oracle was obeyed; and, amidst other splendid trophies, to appeale the incenfed divinity, were displayed THYRSI, with the figures of the parts affected bound to the end of them. The great critic.

For an account of the establishment of the Phallica, see the "Acharmenses" of Aristophanes, act. ii. sc. 1, and the Scholiast upon the passage.

critic, M. Bochart, and our Bishop Patrick. after him, affert the whole of this relation to be a direct forgery from a passage in Samuel, where the Philistines, having taken and violated the ark of the God of Ifrael, are smitten with emerods, a distemper, concerning the exact nature of which the commentators are not fully agreed, but which, from the text of verse o, was doubtless of a similar nature with that before mentioned. On inquiry of the priefts, with what trefpass-offering the God of Israel might be appealed, they are defired, among other things, to prepare five golden emerods, according to the number of the principal cities of Philistia, and dedicate them to the God of Israel; which mandate when they had obeyed, the diftemper ceafed to make farther ravages among them. The fimilarity in these two accounts is singularly striking; but there feems to be no necessity that the one should be a forgery from the other, as those learned gentlemen have afferted, especially fince it is acknowledged by both, that the ancient heathens confecrated to their gods fuch memorials of their deliverance as best represented the evils from which they were liberated :

^{*} See Bochart's Canaan, lib. i. cap. 18. Bilhop Patrick's Commentary on Sam. I. cap. vi. ver. 1.

liberated; and, in fact, among the Hindoos, according to Tavernier, it is a custom at this day, that, when any pilgrim goes to a pagod for the cure of any difease, he should bring the figure of the member affected, made either of gold, filver, or copper, according to his rank and ability, as an offering to the god.* But what the reader will probably think still more fingular is, that the worthip of the Lingham God is attempted to be explained in the very fame way by a Hindoo writer, quoted in the SKETCHES, published by Mr. Crauford, which the reader may fee there at length, and of which the following is only the outline, viz. That Seevah, incensed against a certain race of devotees, who, under the external appearance of fanctity and austerity, practifed fecretly the most infamous vices, descended from heaven to punish and expose the hypocritic race. The event was, that, their impiety being as bold as their hypocrify was base, they attempted to cope with the god of terrors, and by horrible incantations produced a tiger, whose mouth expanded like a cavern, and whose voice resembled thunder, which they fent against the god, who flew the monster

^{*} See Voyage aux Indes par I. B. Tavereier, tome iii. p. 227, edit. à Rouen, 1713.

monster with one blow of his club, and then. like another Hercules, covered himfelf with his fkin. Every other effort to revenge themfelves upon Scevah failing, they, by the fufferance of heaven, fent a confuming fire to destroy the genitals of that god, who, we have feen, is the supreme regenerative power of nature. " Seevah, enraged at this attempt, turned the fire with indignation against the human race, and mankind would foon have been destroyed, had not the preserver Veeshau. alarmed at the danger, implored him to fufpend his wrath. At his intreaties Seevah relented. But it was ordained, that, in his temples, those parts should be worshipped, which the false devotees had impiously attempted to destroy."* This story is an evident compound of allegory and physics, as are all those of Egyptian origin that relate to this curious worship. In fact, the pride of the philosopher would fain explain away, by argument, the groffness of a devotion so degrading to the dignity of human nature, While I again affert my belief, that it came from Egypt to India, I at the fame time declare my conviction, that it originally flowed neither from Seevah, nor Ofiris, nor any other

^{*} SKETCHES relating to the Customs of the Hindoos, p. 177.

other fabulous divinity, but from that abandoned HAM, the JUPITER HAMMON of the Egyptians, their first god and first monarch, from whom the whole country in Scripture is often denominated the land of Ham; from that Ham, who, according to the fense of the word PEOR, above-mentioned, was guilty of the horrible enormity of exposing and deriding the nakedness of an aged father, and the base rites of whose prostituted religion are, by the just decrees of Providence, stamped with that eternal brand of reproach, that HIEROGLYPHIC SYMBOL of his crime, which is fo well calculated to impress upon the minds of men. and keep alive the memory of that primæval turpitude committed by the most ancient idolater and the earliest tyrant after the deluge.

I shall now proceed with the reader to take a general view of the more numerous, and not less associations, excavations of Canarah, in the island of Salsette. Salsette is a large and fertile island, separated from Bombay by only a narrow channel, and is seventy miles in circumference, twenty in length, and sisteen in breadth. Of these excavations the most recent and authentic accounts are to be found in the same volume of the Archæologia above

shove referred to, extracted by Mr. Lethieul-lier from the papers of Charles Boon, Efq. governor of Bombay, and in the preliminary discourse of M. Anquetil de Perron to his famous Zend-avesta. The relations of these gentlemen will be our safest guide amidst a labyrinth of mythology, where we shall not have the advantage of M. Niebuhr's accurate and explanatory engravings. M. Niebuhr, when in India, was deterred, as he himself informs us, from visiting Salsette, which was at that period in the hands of the Marattas, by some differences which had recently arisen between the English and that nation.

Governor Boon, laudably employing the power which he derived from his high station to promote the purposes of knowledge, ordered exact drawings to be made, upon the spot, of the principal pagodas and of the more striking sigures on this island. These drawings were seven in number, but were never made public; they formed part of the collection of Mr. Lethicullier; and, on that gentleman's decease, were purchased for the additional enrichment of the private library of the king; a library, which, for the number of scarce and valuable books and manuferipts

feripts it contains, cannot be rivalled by that of any fovereign in Europe, and may be called truly royal. I have denominated these excavations numerous and aftonishing; and so the reader will undoubtedly think them, when he is informed, that, according to the representation of Gemelli Careri, who distinctly enumerates them, the figures of idols alone amounted to above fix hundred in number, ninety of them in and about the great pagoda, which he tells us may be efteemed the greatest wonder of Asia; and adds, that the person, who took the draughts for Governor Boon, declared he was fo ftruck with the magnitude of that stupendous work, that, " when he attentively confidered the whole, he did not doubt but it must have cost the labour of forty thoufand men for forty years together."

Near the centre of the island, and embofomed in extensive woods, which are the haunt of lions, tigers, and other wild and venomous animals, rise four very steep and contiguous hills, exhibiting at a distance the afpect of one entire rock, and bearing on their surface strong marks of calcination.* It is on the sides of these hills that the caverns are hewn, and, from the resemblance of the whole

to a valt city of stone, as well as from the village of Canarah adjoining, the excavations are denominated by the natives " the city of Canarah,"* With this refemblance, Linfchotten, who paid this island a vifit at so early a period as the year 1759, was fo struck, that, throughout his relation, he talks of it as of a town, and calls the excavated apartments chambers and boufes. He describes the front as carved into stories or galleries, leading to fo many separate ranges of apartments, all cut out of the live rock, and rifing fuccessively above each other, " fo that, to be briefe, all the chambers and houses within this compasse, or four galleries, are three hundred, and entirely full of carved pagodes, of fo fearfull, horrible, and develish, formes and shapes, that it is wonderful to behold." To give any very minute description of these sculptures is incompatible with my proposed plan; it will, for the present, be sufficient to remark, that thefe feparate apartments have in general an interior receis, or fanctuary, and a fmall tank, or refervoir of water, for the performance of ablutions. In most of these recesses is displayed the degrading representation of deity before alluded to, " the cylindric stone," defcribed

[·] Linschotten, b. i. c. 44, edit. 1598.

fcribed by Mr. Dalrymple, "the conic marble," mentioned in the Afiatic Researches,* and often in union, that shocks the eye of modesty, the too evident emblems of the male

and female organs of generation.

It is the western hill, which, according to Governor Boon's account, more particularly challenges attention, fince it contains the chief pagoda of the island: in its altitude, but not in its extent and breadth, this pagoda far exceeds that of Elephanta, "being forty feet high+ to the crown of the arch, eighty-four feet long, and forty-fix broad." The vestibule, or portico, is proportionably large and fpacious, and it is adorned with two stately columns finished with capitals and a base. It is in this portico that the two furprising coloffal statues above-mentioned, twenty-seven feet in height and of excellent proportion, are stationed, one on each side, immediately before the entrance into the grand temple; they are adorned with mitre-caps and ear-rings, after the Indian fashion; and, to Mr. Boon's artist, they feemed to have been anciently painted, by the tints of blue and vermilion which yet remained upon them. The portico itself has also one very magnificent gate, and two others

of

^{*} Aliat Refearch, vol. i. p. 254. + Archaol. vol. vii. p. 335.

of inferior magnitude. The superior grandeur of this pagoda feems to arife not only from the height of the roof, but from the circumstance of its being in the form of an arch, whereas that of Elephanta offends the eye, bosh by its lowners and its flatners. This arched roof is supported by thirty-five massy pillars, extremely beautiful confidering their antiquity, of an octagonal form, and about five feet in diameter; the capitals and bales of each being ornamented with figures of elephants, horses, tigers, &c. executed with great skill and exactness. Two rows of eavities, regularly placed, are visible round the walls of the temple, for the infertion of those lamps, which, probably, were kept for ever burning in this gloomy and facred retreat; but what in a more particular manner, at the very entrance of the temple, irrefiltibly impreffes the mind of the beholder with the most awful conceptions of its former magnificent worship, is the stupendous altar at the farther end of the temple, of a convex form, twentyfeven feet in height and twenty in diameter ! Round this high offertory, at certain diftances, are recesses for lamps, and, directly over it, expands a vast concave dome. From these numerous and conspicuous recesses for VOL. II. M lamps,

lamps, from the general position of these altars towards the eastern quarter of the pagoda, from the evidence already brought of the general prevalence among the Hindoos in ancient æras of the worship of the sun and of fire, it can hardly be doubted, but that this fpecies of devotion, deriving perhaps additional ftrength from the vifible emblem of the deity, whose throne was supposed to be fixed in the fun, blazed forth in this temple in the fulnels of its meridian iplendour. Shall I be thought to have violated all the bounds of probability, if I advance one step farther in conjecture, and offer to the public the novel, yet furely not incredible, fupposition, that the pagodas, both of Elephanta and Salfette, were of that kind of fubterraneous retreats, hewn out of the folid rock, which were fo common in Perfia, devoted to the splendid rites of MITHRA, and from that deity denominated MITHRATIC CAVES? In those caves they kept a portion of the facred fire constantly and fervently glowing. The radiant and spotless image of celestial brightness and purity was never suffered to be extinguished, nor even to emit a languid ray, but continually ascended in a pure bright pyramid of flame, fed with the richest gums, with the most fragrant oils, and with the most costly perfumes of the East.

PORPHYRY, in his admirable treatife, De Antro Nympharum, treats at large of these Mithratic caves, of the doctrines taught and the worship celebrated in them; he expressly fays, " " that the most ancient of the human race, before they were sufficiently skilled in architecture to erect temples, confecrated cells and caverns to the Deity;" and what is more particularly to our purpose, he adds, marraxe δε οπε τον MIOPAN εγνωσαν, δια σπηλαικ τον θεου ikesussus, that is, wherefoever men acknowledged MITHRA as the fupreme divinity, they performed the facred rites in caverns. This account indeed appears inconfiftent with what we read of the PYREIA, or fire-temples, which were generally erected on the fummits of mountains; but these are of far later date than the periods to which Porphyry alludes, and owed their origin, according to the magi, to the zeal of Zoroaster, to preserve the saered flame, which descended from heaven, from extinction by the tempeltuous violence of storms and rain. But these caverns were not only the temple of the most splendid reli-M 2 gion,

Porphyrius in Antro Nympharum, p. 263. Cantabrigie, 1655.

gion, they were the folemn schools of the sublimest sciences inculcated in those early ages of the world. What was the science principally inculcated in them, befides theology, we may learn from the fame Porphyry in his description of the cave of Zoroaster: that it was confecrated to the honour of MITHRA, the parent of the universe; that the cave represented the world created by MITHRA; and that the elements of nature and the various quarters of that world were represented by different symbols properly disposed around it. The sun was probably represented by a sphere of gold, or fome resplendent gem of immense value suspended aloft, and the roof glittering with gold and azure, and with well-imitated representations of the celestial bodies, inspired the enthulialtic foul of the Brahmin as well with the most elevated conceptions of his own religion as of the high dignity of his diftinguished order. If the scenes of the SACON-TALA" be picturesque of the manners of the times in which that drama was written, there cannot be entertained a doubt, but that, upon certain occasions, also in those caverns were practifed the most mysterious rites of MAGIC, and

[&]quot; "Who, like the choleric Dunvasas, has power to confume, like raging fire, whatever offends him?" Sacont. p. 40.

and that they fometimes echoed with the most tremendous incantations.

The affertion of PORPHYRY, relative to the original purpose to which the MITHRATIC CAVES were applied, is firongly corroborated by a passage in CELSUS, quoted by Origen, where that learned writer informs us, that, in the rites of MITHRA, the Persians represented by fymbols the two-fold motion of the stars, the fixed and the planetary, and the passage of the foul through them. By way of illustrating this doctrine of the fidereal Metempfychofis, " they erected in their caves a high ladder, on the ascent of which were seven different gates, according with the number of the planets; the first gate was of lead, which was intended to mark the flow motion of the planet SATURN; the fecond gate was composed of tin, by which they shadowed out the brilliancy and foftness of VENUS; the third gate was of braft, which they imagined a just emblem of the folidity and durability of Jupi-TER; the fourth gate was of iron, by which MERCURY was typified, because he is fuited, like iron, to all forts of labours, whence profit may be derived; the fifth gate confilted of a mixed mass, of which the heterogeneous composition, variableness, and irregularity, rendered

dered it the fit emblem of MARS; the fixth gate was of filver, exhibiting an apt fimilitude of the mild radiance of the filver emprels of THE NIGHT; and the feventh was of gold, a proper emblem of the Sun, the one being the king of metals, and the other being the fove." reign of the fky." I must again repeat, that this notion, of the orbs of heaven being animate intelligences, was intimately blended with the most ancient superstition of the earth;* we find it particularly predominant in the Phonician Cosmogony of TAUT, which afferted their ZOPHESAMIN, or the Overfeers of Heaven, to be thus animated, + and the reader will remember a remark quoted before from the Ayeen Akbery, that many of the ancient Hindoo philosophers believed "that the flars were the fouls of men departed this life, and raifed to that high dignity in reward for their virtues and aufterities."

It was then in periods when the folar worfhip, in this part of Afia, flourished in the zenith of its glory, that THESE CAVERNS were
scooped out of the native rock, with that indefatigable

^{*} Celfus apud Origen contra Celfum, lib. iv.

[†] Cumberland's Sanchoniatho, p. 42.

I Ayeen Akbery, vol. iii. p. 11.

defatigable labour and with that persevering patience which devotion could alone have infpired, and which the hopes of eternal reward could alone have supported. It was in these folemn retreats of religion and philosophy, that the contemplative and absorbed foul approached nearest to the perfection of the divine nature. It was bere that the bright emblem of the divinity beamed forth a luftre infupportably resplendent and powerful; but particularly at that awful feafon, when the world was deprived of the bleffing of the living folar orb, and when nature lay buried in profound filence and in midnight darkness. If, as Mr. Hamilton informs us,* from ocular furvey, no lefs than a hundred lamps were preserved incessantly burning before the idol JAGGERNAUT, how many thou fand must have been lighted up in the extensive caverns of Salfette and Elephanta? It is probable, that in the day-time the Brahmins mounted the eminences of their rocks, and paid their devotions on the fummits of the loftiest mountains. They afcended the heights of Salfette, as the Egyptian priefts of old ascended the apex of the pyramids, to adore the Sun, and to make astronomical observations. Accordingly, we are informed. M 4

[.] Hamilton's Voyage, vol. i. p. 385.

informed, by some accurate observers, that, from the eminence of the rocky steep of CANARAH, to which there is a regular afcent of steps cut out of the rock, a prospect opens itself beyond description beautiful and extensive, and that it is an eminence not to be looked down from without terror. M. Anguetil expressly fays, that, to him, one of the mountains of Canarah feemed to be hewn to a point by buman art, undoubtedly from the same religious impulse that dictated the form of the pyramids of Egypt, which the learned Greaves infifts were not fepulchres, as has been generally funpoled, but stupendous temples,* erected to Ostris, the Egyptian appellation of the Sun, the Egyptians imitating in their fabrication of them the model of the folar ray, and the ufual form under which the Deity was in the most ancient times worshipped. They were indeed denominated pyramids and 78 nupes, from the figure of a flame of fire; and a superstition, congenial with their name, was once undoubtedly practifed in their gloomy retreats. When the immediate object of their veneration was lost to their view, the Brahmin devotees defcended with the shades of evening into their ftony

See an account of a vifit to Canarah, by fome members of the council of Bombay, inferted in M. Anquetil's account.

stony recesses, and there renewed (before obiects emblematical of his apparent figure, power, and properties) their fervent adoration. THE ORB OF RADIATED GOLD, THE ERIGHT SPIRAL FLAME, ascending from the ever-glowing altar, impressed their inmost souls with an awful fense of the present Deity. The planetary train was represented by images equally emblematical of their supposed form and influence, and the figns of the zodiac blazed in imitative gold round the emboffed and vaulted roof. Imagination cannot avoid kindling at the scene, and it is difficult to refrain from rushing into the enthusiasm of poetry, while we take a review of the probable splendour and magnificence of this ancient species of devotion. All the caverns might truly be called PYRÆIA, or fanctuaries that cherished the eternal flame. The whole circumference of the rock was illumined and the mountain burned with fire! Throughout all the deep receffes of its caverns, for ever reverberated the echoes of the hallowed conque of sacrifice. Around all the shores of the island, THE SA-CRED BELL of religion incessantly rang. The fecret gloom of those majestic forests, that furrounded the rock, perpetually refounded with the MYSTIC song of prayer and thanksgiving. One

One order of priefts, arrayed in vestments of WOVEN BARK, and having on their heads those pyramidal caps, which equally distinguished the Indian and the Egyptian priests, and which, M. Savary informs us, are at this day worn by the latter, attended to watch the never-dying flame, and invigorated it by the frequent injection of precious gums and aromatic woods. Another order of priests was employed in preparing the various facrifices, Some were occupied in instructing the younger Brahmins in the profound arcana of those more abstruse sciences, of which the numerous emblems on every fide fo confpicuously attracted the attention; while others again were initiating them into the mysterious rites of that religion, of which the principal deities were fculptured on the walls of their caverns. No doubt many of those sculptures, which cannot now be explained, shadow out the sacred history of the Indian religion as well as the heroic feats of the ancient rajahs. They may exhibit the contentions of the benevolent and malignant Dewtahs. They may display the triamphs of persevering piety over vice armed with giant terrors, and of justice over oppression, though throned in the plenitude of its

its power, and arrayed in all the gorgeous enfigns of usurped sovereignty. This appears to me the most certain clue to the explanation of the greatest part of the carved imagery; and exactly in this manner were the innumerable mythologic figures that crowd the walls of ELORA, near Dowletabad, explained to M. Anquetil by the two Brahmins who attended him thither for the purpose of throwing light upon this obscure subject. Mr. Dalrymple's account, in the Archæologia, greatly ftrengthens this conjecture; for, the writer clearly discovered " the effigies of great persons compelling their fubjects to obedience; others executing justice; others, as he conceived, by the mildness of their aspect, shewing tendernefs in their admonitions; and others again exhibiting instances of their proud prowess in arms." While virtue and science kindled at these examples ever present to their view, while devotion was animated by the awful prefence of the deities addressed, how ardent must have been the throb for distinction which the former felt, how energic the ejaculations of the latter! Every tongue uttered the dictates of wifdom, and every heart bounded with the transports of religion. well thought want after to certain particularly a

SECTION IV.

The Parallel between the physical and symbolical Superstition of India and Egypt commenced, preparatory to a more extensive Survey in a future Section. — The Origin and History of Hieroglyphic Designation. — Those of India and Egypt compared. — Have nearly all an astronomical Allusion. — The principal Deities of either Country and their Functions compared. — The Cavern-Rites of Mithra practifed in both. — A slupendous Excavation in the Thebais, with a Sacrissice to the Sun sculptured on the Walls. — The Whole to be referred to a Chaldaic and Sabian Origin.

L fhould appear to some of my readers to be of too general a nature, and lest I should be supposed to have substituted eloquent declamation in the place of historical fact, I must now intreat their permission to descend to certain particulars, that will clucidate what

has been there observed; and consider the first origin, primitive intent, and progressive improvement, of HIEROGLYPHIC SCIENCE. The subject, as it relates to India, has never before been extensively discussed; and, if their patience be not totally exhausted, some interesting matter will perhaps occur, in the course of the investigation, to gratify curiosity and reward attention.

That many of the hieroglyphic sculptures in the caverns of Salfette and Elephanta bear a reference to the astronomical as well as to the mythological notions prevailing in India, cannot be doubted by any body who confiders how intimately, in the ancient world, these feiences were connected, or rather that their mythology, in a great degree, rested upon the basis of their wild astronomical speculations. It has been afferted by the ancients, and the affertion has been received with implicit confidence by the moderns, that HIEROGLYPHICS were invented, by the priefts of Egypt, to shade, under a veil of impenetrable mystery, the sublime arcana of their theology and philosophy; that these hieroglyphic, or allegorical, characters were the first-written language of mankind, and were the undoubted origin of alphabetical letters. Hence Kircher on this subject declares.

declares, De primævis Egyptiorum litteris variæ diversorum sunt opiniones. Omnes tamen in boc confentiunt, plerasque ex sacrorum animalium forma, incessu aliarumque corporis partium sitibus et symmetria desumpeas.* A weiter of the present century, however, not inferior in genius to the most learned of the ancients, who has devoted the greater part of his fecond volume of the Divine Legation of Moles to the elucidation of the obscure history of hieroglyphics, and, in particular, of those of Egypt, to which country our subject at present naturally directs our attention. ftrenuoufly contends, that emblematic painting was the first as well as readiest method which mankind adopted to communicate their conceptions to each other. He exemplifies his new theory by exhibiting an engraving to of a Mexican picture, copied from Purchase, which contains the history of an ancient king of Mexico, during a period of fifty-one years, highly curious and full of emblematic figures. He corroborates that theory by affirming, from a Spanish writer, that, when the inhabitants of the coast of South America sent expresses to Montezuma

^{*} Gdip. Ægypt. vol. iii. p. 42.

^{.†} See that engraving, vol. ii. p. 67, of the Divine Legation of Mofes, demonstrated.

Montezuma concerning their first invasion of the Spaniards, their advices were delineated in large paintings upon cloth. Hieroglyphic figures of animals and other objects, in imitation of those paintings, he represents as the ·next gradation in the mode of communicating information; and, when these were established, though he will not allow them to have been invented, he admits them to have been employed, by the artful policy of the Egyptian priefts, for the purpose of concealing the more facred mysteries of their superstition, as well from the eyes of the vulgar among their own countrymen as from the scrutinizing curiofity of learned foreigners. Whatever might have been the real origin of hieroglyphics, and this feems to be the most rational account of it, the same policy, in order to render them more august and venerable, led those priests to reprefent them as fabricated by the immediate inspiration of the gods, whose rites and mysteries they typified. The stupendous fystem of the Egyptian religion and sciences soon became involved in the holy gloom of hieroglyphics. The vestibules, the walls, the roofs, of their temples, were covered with these mystic fymbols, shadowing out, under the figures

figures of animals and other expressive emblems; the history of their greater and tutelary deities, as well as that of their kings and legislators, and indicative of the revolutions and influences of the hoft of heaven. As in the Egyptian fo in the Hindoo temples, near, to the deity were generally placed the animals facred to that deity, which, gradually becothing his representative fymbol upon earth, in time fucceeded throughout Egypt to the honours the deity enjoyed, and, even in India, were honoured with respect bordering upon veneration. On this point I cannot help agreeing with Shuckford, in opposition to Warburton, that here we may plainly discover the origin of that worship, so degrading to human nature, which was paid in ancient pagan times to the brute creation; but, as that kind of worthip was never very predominant in Hindostan, I shall not particularly enlarge upon the subject, though some of its striking features will naturally meet our views in the course of this investigation. Thus, in the former country, the Apis was the known symbol of Ofiris, and was accordingly worshipped. The White Bull, according to Sir William Jones, is the animal

at language

on which Seeva* is represented in the Indian pagodas; and this may be one cause of the general homage paid to that animal in Hindostan, although, take away the allegory, and it will be found, that both are only venerated for their great use in agriculture. A cat was in Egypt considered as a symbol of the moon, and Plutarch+ gives this curious philosophical reason for it; they thought that the contraction and the dilatation of the eye of that animal afforded a just emblem of the increase and decrease of the moon's orb. The representa-

Vol. II. N tive

[.] Casting my eye, during the period of writing this differention, upon Mr. Coffard's laborious attempt to trace, to Oriental primitives, the Greek names of the feveral planets; I observe. that, in examining the appellation Zive, or JUPITER, he produces two Chaldee verbs, which he translates Sevab and Seve, figuifying to exalt for jey; either of which, he fays, might be its possible radix. He then traces the fame word to an equally possible radix in Arabic, which he writes du or d/u, fignifying Lord, or one that possesses; with which, he adds, "very nearly agrees the dys of the Welfh, the des of the Cornifh, and the dous of the Latins;" to which may probably be added the die of the Hindoos. This name Mr. Coftard thinks might fuit the character of the prince, but the name of the planet he would deduce from dba, lax, lumen, fplendor, which might be the primary meaning of the Chaldee Seval. If the above derivation be not too far-fetched, it will help to unravel the history of this god, who, we have before observed, has been denominated the Japiter Geniter of India. Collard's Allronomy, p. 193.

[†] Plutarch in his Treatife de Iside et Osiride, p. 360, which treatife developes all the complicated mysteries of that worthip.

tive fymbol of the moon in India, according to the Heetopades * and Mr. Wilkins, is a rabbit, which animal constantly ornaments the right hand of the representative images of that deity, drawn or feulptured in the pagodas. A ferpent was adored in Egypt as the emblem of the divine nature; not only, fays Warburton, " on account of its great vigour and spirit, but of its extended age and revirescence;" and we have observed from the Aveen Akbery, that, in Cashmere, there were no less than seven hundred places, where carved figures of fnakes were worthipped. Indeed almost all the deities in Salsette and Elephanta either grasp serpents in their hands or are environed with them, which can only be intended as a mark of their divinity. They are also sculptured on the cornices surrounding the roofs of those caverns and the more modern pagodas; a circumstance which reminds me of another use to which serpents were applied in the fymbols of Egypt; for, their wreathed bodies, in its hieroglyphic sculpture, represented the oblique course of the stars, while the same bodies, formed into a circle, were an emblem of eternity; and it will be remembered, that the serpent was one

of the most conspicuous of the forty-eight great constellations, into which the ancients divided the visible heavens. On those cornices too, in emboffed work, are feen very confpicuous figures of horfes, elephants, and lions, three of the most distinguished constellations of the Hindoos; the two former of which stand foremost in order among those enumerated in Mr. Costard's table * of the twenty-feven constellations, of which the zodiac of the Indians confifts, called ACHE-VINI and BARANI; literally, the horse and the elephant: while the third, or SING, is that favourite fign of the fame zodiac, which gives the additional honour of its name to that of every brave rajah, who chooses to be diftinguished on the roll of fame for possessing the fortitude of a LION.+ These symbolic animals probably, in the ancient mythological fystem, represented the renowned hero-deities of India in the fame manner as in Egypt the god Orus was recognised in Orion, Anubis in Sirius, or the Dog-star, Typho in Ursa Major, or the Bear, and Nephthe in Draco, or the Dragon. It was this close union of the Hindoo theology and astronomy which deceived that elegant and judicious historian, Mr.

N 2 Orme,

^{*} Coffard's Astron. p. 5. † As CHETT SING.

Orme,* when he declared, that the history of their gods was a heap of the greatest absurdities. "It is, fays he, Eswara twisting off the neck of Brahma; it is the Sun who gets his teeth knocked out, and the Moon who has her face beat black-and-blue at a feaft, at which the gods quarrel, and fight with the spirit of a mob." These celestial combats, represented at various festivals in India, doubtless allude to the conjunction or opposition of the constellations; and the affertion of Mr. Wilkins, that, on every eclipfe, the Hindoos believe those planets to be seized upon by a large ferpent, or dragon, which affertion is supported by two passages of the Geeta+ and Hectopades, I in the strongest manner corroborates the supposition. I cannot pass by this inviting opportunity of demonstrating the very striking similarity in fentiment, subfifting upon this as well as upon many other occafions, between the Hindoos and the Chinele, proving either an original descent from the fame common ancestor, or a most intimate connection between those nations at some re-

mote

^{*} Orme's Hindostan, vol. i. p. 3.

^{. +} Bhagvat Geeta, p. 149.

Hectopades, p. 28, and note, p. 299.

mote æra. The Jesuit Le Compte, giving a description of a partial eclipse of the sun, which he observed in China about the end of April, 1688, informs us, that, during the whole of the eclipse, the Chinese were under the greatest alarms, imagining they were going to be suddenly enveloped in thick darkness, and made every where the most hideous yelling and horrid noises to oblige the dragon to depart. "For, to this animal," he adds, "they attribute all the disappearances of the stars which take place, because the celestial dragon, being hunger-bitten, at that time holds the Sun or Moon fast between his teeth, with intent to devour them."

The whole of this curious relation exhibits to us, not only decifive evidence of the early proficiency of the Hindoos and Chinese in the science of astronomy, but a glaring proof how deeply, and at what remote periods, their astronomical and theological speculations were blended together and, as it were, interwoven.—To explain the allusion, it is necessary that the reader, not conversant with astronomy, should be informed of the following circumstance, to which I request his attention, as it will be of material use towards and understanding

Le Compte's Memoirs of China, p. 480. Englishedit.

understanding many parts of the Indian astronomical mythology that will hereafter occur. The two points in the heavens, where the moon's apparent orbit cuts the ecliptic, are called the moon's NODES. The point where the moon appears to cross the ecliptic, during her passage into north latitude, is denominated her ASCENDING NODE. On the other hand, the point in the heavens, at which the moon croffes the ecliptic, during her paffage into fouth latitude, is called by aftronomers her descending node. To the circular curve. thus described by the moon's orbit, the fancy of the ancient Afiatic astronomers assigned the figure of a ferpent, as indeed they did to the path of the fun through the figns of the zodiac, which, in Eastern hieroglyphics, is represented by a circle of intertwining serpents. Serpens and Draco are terms that in astronomy are fynonymous, and it is therefore, according to Dr. Long, whose account of the nodes I have followed above,* that the Arabians give the appellation of dragon's bellies to those parts of the orbit of the moon where fhe makes the greatest deviation from the line of the ecliptic. This is customary with them at this day, and proves that they derived their aftronomical

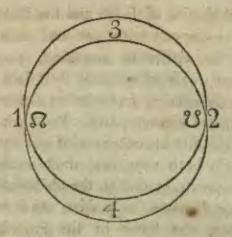

[.] See Dr. Long's Aftronomy, vol. ii. p. 361.

astronomical notions from the same fountain with the Indians and Chinese: I mean their ancestors of the old Chaldwan school. The moon's ascending node is therefore called the DRAGON'S HEAD, and her descending node the DRAGON'S TAIL. But we fee that the allegorical allufion of the rapacity of the celestial dragon is likewise extended to the sun, as indeed it may be to any planet, by whose passing orbit the ecliptic is at any time and in a fimilar manner interfected, and from ideas of this kind undoubtedly have arisen all those ridiculous tales of the contests of those celestial combatants. As an illustration of what has been just observed, I have annexed a reprefentation of the real astronomical figure made by the moon's orbit in passing the ecliptic, and of the hieroglyphic emblem to which it indifputably gave birth.

It may here be remarked that no ecliples can happen, except when the two planets are in or near the nodes or interfections of the ecliptic, whence indeed that great circle derives its name. This portion of the heavens, therefore, has been in all ages the object of more particular observation of the speculative race of philosophers, and it is in this region that insidelity has been too fatally busy in form-

N 4

ing calculations and erecting hypotheses subverfive of the Mofaic theology and hoffile to the dearest interests of mankind. I shall, hereafter, have occasion to evince that it is chiefly, if not folely, on calculations founded upon the retrograde motion of these nodes from east to west, that is, in an order contrary to that of the figns, and the flow, but now-demonstrated, decrease of the obliquity of that ecliptic, after the rate of a degree in one hundred years, that all the ancient atheistical systems, afferting the immense duration of the world, have been founded. On a minute examination of them, we shall probably discover that they are erected upon a basis scarcely less chimerical than the fable of the celestial dragon, who, upon every lunar eclipfe, is supposed by the Hindoos and the Chincle to seize with his teeth that affrighted orb. In the aftronomical figure subjoined, number 1 denotes the moon in her afcending node, number 2 represents the planet in her descending node, numbers 3 and 4 mark that wide portion of the ferpentine curve, which, in the Arabian aftronomy, is called the belly of the dragon. By the dragon, Dr. Long obferves, the ancients did not mean that fictitious and monstrous figure with wings, which we .

fee represented in modern paintings, but simply a large snake, as delineated below, by a comparison of which with the former mathematical figure we so plainly trace the progressive union of their astronomical speculations with their hieroglyphic theology.

The Brahmins of India and the Bonzes of China, to impress with awe and veneration the inferior classes of mankind, purposely veiled under obscure ænigmas their deep astronomical discoveries, and invested science with the mantle of hieroglyphics. With what unwearied affiduity aftronomy itself was anciently purfued in both countries, those massly marble instruments, erected in the observatories of Pekin and Benares, to be feen, the former in Du Halde, the latter in the Philosophical Transactions, and with correct engravings of which that portion of this work, which treats of their literature, will be decorated, remain perpetual and irrefragable testimonies. I shall. hereafter, in my review of Oriental astronomy. have occasion to remark how deeply these astronomical pursuits influenced all the national habits and opinions of Eastern people; how intimately they were blended with all their systems of theology, and even infected their folemn codes of legislation, in which we should least of all expect to find the operations of fancy to predominate. Of all the phænomena of altronomy, none, however, excited more general difmay and aftonishment. throughout all the nations of the pagan world, than eclipses. The moon was thought, during

during those solemn periods of public alarm, to be struggling in laborious toils, and, to assume the affuage her pangs, in that moment of imagined distress, while the Chinese rent the air with the sound of cymbals, trumpets, and the clanging of less melodious instruments, the whole affrighted nation of the Hindoos crowded to the banks of the Ganges, and other facred rivers, and anxiously endeavoured, by universal ablution in their streams, to prepare themselves for the destiny which they thought rapidly approaching.

As another evident proof how early and how deeply the ancient Indians were engaged in astronomical pursuits, the reader will permit me to remind him of what has already been remarked from Mr. Halhed, that the days of the week are named, in the most ancient and venerable Sanfcreet books, from the very fame planets to which they were affigned by the Greeks and Romans. Their names, as they stand in that gentleman's publication, are AUDEETYE WAR, or Solis dies ; Some war, or Lunæ dies; Mungel war, or Martis dies; Boodhe WAR, or Mercurii dies; BREEHESPET WAR, or Jovis dies; SHOOKRE WAR, or Veneris dies; and SHE-NISHER WAR, or Saturni dies. I must here obterve

observe that these names of the seven planets, over each of which a god prefides, are very differently written by M. Sonnerat, as the reader may see in page 170 of the first of his instructive but costly volumes,* as indeed are almost all the names of the Indian divinities, from the mode of writing them in the Afiatic Refearches, and by Mr. Wilkins, a circumstance which has often been to me the occasion of some perplexity, since I could only discover them by their functions to be the same deities. M. Sonnerat has in the fame page fupplied me with a remarkable proof of my recent affertion, that the various conjunctions and oppositions of the planets, their approaches towards the earth, and their retrogradations,

are,

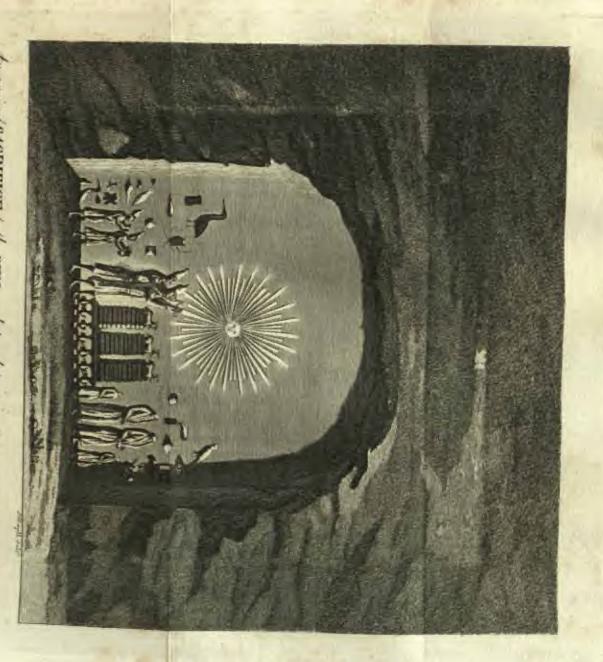

I have, with good reason, mentioned the publication of M. Sonnerat as colly though instructive and ingenious. For the two quarto volumes, of which it consists, I paid Mr. White three guineas and a half; and to give the reader some faint idea of the expense which I have been at on account of this publication, I shall insert below the prices of only a few of these foreign authors upon Oriental subjects; antiquities, geography, and astronomy. Antiquité expliquée, 15 tom. 151. 152. D'Ancarville, Recherches, &c. 3 tom. 31. 182. Voyages de Niebuhr, 4 tom. 51. 52. D'Anville Antiquit. Géograph. 11. 52. Kircher's Offdipus Ægyptiscus, 4 tom. 41. La Lande, Astronomie, 41. 43. &c. &c. &c. besides the most expensive of our English authors on Indian and Oriental Antiquities, as the Assaic Researches, 2 vol. 51. 53. Poccock's Egypt, 2 vol. 41. 43. &c. &c. &c. &c. &c.

are, among the Hindoos, the perpetual fource of rejoicing or alarm. " SANI, or Saturn," fays this author, " is the god who inflicts punishment on men during this life; he approaches only to annoy them: Saturday is the day of the week facred to him. The Indians entertain dreadful apprehensions concerning him, and offer to him conciliatory prayers. He is represented as of a blue colour; he has four arms, he is mounted upon a raven; and is furrounded by two ferpents, whose intertwining bodies form a circle round him." The raven, I must remark, is a bird of ill presage, and how it came originally to be so esteemed all over the Oriental world will be clearly manifested when we shall arrive at the history of the true Saturnian patriarch. The ferpents, forming a circle round the orb of Saturn, doubtless indicate the vast ring which furrounds that planet; and, if this mythological delineation of Saturn be of any remote date, it is a still farther proof of their early discoveries in aftronomy, fince the phænomenon of Saturn's ring was, according to Dr. Long, never promulgated to European aftronomers before the time of the great Huygens, who first published his Systema Saturnium in 1659.* I fhall

[.] See Long's Affronomy, vol. ii. p. 714.

I shall presently enter upon a more extended and particular inquiry into the theological and metaphyfical doctrines taught in the caverns of India, and endeavour to ascertain the æra in which, and the race by whom, they were originally fabricated. That they were caves in which the mysteries of Mithra, or mysteries very much resembling those of Mithra, were anciently performed, has, I truft, been proved both from the analogy in religion between the old inhabitants of Persia and India, in their general veneration of the sun and FIRE, as well as from the fimilitude of the ftructures and ornaments of these caverns with those of the rocky temples, excavated, in honour of Mithra, in the mountains of Perfia and Media. It appears to me that MITHRA and SURYA are the fame mythologic being, and that the SAURAS and the PERSEES are fects only different in name. The former appellation is afferted by Kircher to be the fame with Mithraim, or Milraim; * and, if we could allow that derivation to be just, we should not long be perplexed concerning the origin of his worship, since Misraim was the first-born fon of the idolatrous Ham. Others, however, have, with more probability, derived

[·] OEdip. Ægypt. tom. i. p. 218.

An ancient SACRIFICE to the SUN sculptured in a grotto or curery near the modern Town of BABAIN, in Upper Egypt . The rock has been excavated by the Chifact to the height of fifty feet and is lifty feet in width and six in depth?
The female statues on the left have been mulitated by the barbarian ARABIANS.

from Mount frances

rived the name from an Oriental primitive, fignifying a rock, an etymology very correfpondent with his origin; for Mithras, in the Persian mythology, is said to have been born of a stone, by which was allegorically denoted the FIRE emitted by the collision of two flintstones : semina flammæ abstrusa in venis silicis. Plutarch, possibly from some Oriental fable, has improved upon this allegory; for, he acquaints us, that Mithra, born of a stone, and defirous of having offspring, copulated with a stone, whence was born a fon named Diorphos, Light. Mithra, in the same vein of allegory, is faid, by Porphyry, to have been A STEALER OF OXEN, which he fecreted in caverns; intimating at once that the fun, like the ox, was the emblem of fertility, and that his prolific and generative heat produced that fertility by fecret and invisible operations.

It is very remarkable that, according to a passage in Eusebius, quoted by Mr. Bryant,* Osiris himself was, by the ancients, sometimes called Surius, Oseisin agosayosiuson was Euseon; and still more so that, according to Lilius Gyraldus, cited by the same writer, the Persian deity

^{*} See Analysis, vol. ii. p. 121, where are the references to these respective authors.

deity should be denominated Sure; Perfæ Eupy Deum vocant: for, in this title, we recognize the very name of the folar divinity of India. If this should appear far-fetched, by reverting to that country where the worship of the sun and PLANETS was first propagated by the impious Belus, we shall find in its ancient name of Dupia, Syria, and in its modern appellation of Souria, fufficient intimation from what region and from what people the Indian name and adoration of the fun were probably derived. Earliest established in that country, the Sabian error diffused itself rapidly over all the East. The Mithratic worship in caverns, however, continued longest in Persia. The Perfians thought it impious to erect temples to the deity; they continued, therefore, to perform this worship by night in the native and obscure cavern, and by day under the expanded canopy of heaven.

Cambyfes, that remorfeless despoiler of the Egyptian temples, is, by Mountfaucon, supposed to have been the occasion of renovating the Mithratic worship in Egypt about five hundred years before the æra of Christianity; for, though the Egyptians had doubtless worshipped the sun in caverns long before that period, yet the worship in subterraneous recesses

had, for many centuries, been superfeded by that in their august temples. That the rites of the Persian Mithra did, at that period, a fecond time commence, and were blended with those of the Egyptian deities, is evident from a yery curious engraving, with which he has favoured the public, of an actual SACRIFICE TO THE SUN, represented in an artificial cavern near the rains of BABAIN, in Upper Egypt. I thought it so curious a monument of this once almost-universal idolatry, and, at the same time, so immediately illustrative of my own affertions of the ancient prevalence of it in India, that I have had it engraved, and shall present the reader with two descriptions of it, written at two different periods, a century distant from each other. The first, from Mountfaucon, is that of the Jefuit Du Bernat, who defigned the whole upon the fpot, and is as follows: "We passed the canal of Joseph, an ancient aqueduct, and went to the village of Touna, near the ruins of the city Babain, which is in the midst of those of Aboufir. We paffed over these ruins and a long plain of fand, which brought us to a very fingular monument, which my guide would have me fee, and which deferves indeed to be feen. It is A SACRIFICE OFFERED TO VOL. II. THE

THE SUN, and is sculptured in half-relief on a great rock. The hardness of the rock would have been able to defend this monument from the injuries of time, but not those of the fword, which we find the Arabians have used to deface that part of the facrifice which is wanting. I made a defign of it as it then appeared. This stupendous cavern is hewn out of a vast rock in the middle of a mountain. It must have taken up a long time and prodigious labour to excavate this rock, between five and fix feet deep, and for fifty feet high and fifty wide; for, in this fo great superficies, all the figures relating to the facrifice to the fun are comprehended. The fun appears encircled with a body of rays fifteen or twenty feet in diameter. Two priests of a natural stature, their heads covered with long caps terminating in POINTS, stretch their hands towards the fun, adoring him. The ends of their fingers touch the ends of the folar rays. Two little boys, covered like the priefts, fland by their fides, and reach them two great goblets full of liquor. Below the fun there are three lambs, killed and extended on piles, confisting of ten pieces of wood. Lower, by the piles, are feven jars, or diotas. On the other fide of the fun, opposite to the facrificers.

facrificers, there are two women and two girls in full relief, joined to the rock by part of their backs only and their feet. We fee very plainly marks of the strokes by which their heads were destroyed. Behind the two boys there is a kind of fquare, charged with feveral hieroglyphics, but fome larger than others are placed up and down in the image."* So far M. Bernat in the Antiquities of Mountfaucon. The other account is that of M. Savary, who vifited this curious monument in 1777, and I am happy in an opportunity of doing justice, in this respect, to the accuracy of this traveller, who has been decried as a writer rather fanciful than correct. Through each of the descriptions a strong feature of fimilarity reigns, and it must give pleasure to the reader to find that, in the space of nearly a century, no fresh injury has been done, through the prejudice and superstition of the tyrants under whose dominion Egypt groans, to so beautiful a fragment of mythologic antiquity.

"A league to the fouth, (fays M. Savary,) are the ruins of an ancient city, which enrich the small town of Babain. Some distance be-

O 2 youd

^{*} See Mountfaucon, L'Antiquité expliquée, the supplement on the gods of Egypt, tom. ii. book 7, and plate 50.

yond is a curious monument, a rock smoothed by the chiffel, in the body of which a grotto has been cut fifty feet in diameter and fix' deep; the bottom represents a facrifice to the fun, which is sculptured in demi-relief; on the right hand, two priefts, with pointed caps, raife their arms towards that orb, and touch the end of its rays with their fingers; behind them, two children, with fimilar caps, hold vases for the libation. Three wood piles, fustained by seven vases with handles, and placed under the fun, bear flain lambs. On the left are two young maidens, who are only attached to the stone by the feet and back: the Arabs have broken off the heads and disfigured them with their lances. Various hieroglyphics around give, no doubt, the hiftory of this facrifice, which I believe is meant to Jupiter Ammon, a symbolical deity, by which the ancient Egyptians denoted the Sun's entrance into the fign of the Ram. This animal was confecrated to Jupiter, and they then celebrated the commencement of the astronomical year and the renewal of light. The monument thus described, cut in hard stone, cannot but endure to the latest posterity."*

Of this most valuable and elaborate remain of antiquity, so directly elucidatory of the Mithratic worship of the Persians, and which, perhaps, has not, for its singular curiosity, its rival in the world, Mr. Mazell, my engraver, has taken uncommon pains to furnish the reader with an exact copy: and Mountfaucon himself having farther obliged his readers with various judicious observations and conjectures concerning the several objects pourtrayed upon it, I shall state them as a guide to the judgment of the reader, while he surveys with wonder a work thus exquisitely wrought with so rude an instrument as the chiffel.

The Persians, our author remarks, had two ways of representing the sun in sculpture and painting: the one, under the form of a young man, whom they denominated Mithers; and the other in the similitude of a human face radiated. The latter is exhibited in the annexed plate; and, in the second part of this volume, my subscribers will be presented with a very correct engraving, copied from a rock, of the Persian Mithras, winged, with other astronomical symbols. By the three piles on which the lambs are extended for facrifice, he is of opinion, are symmetric than the sum of the present the sum of the su

03

bolized

bolized the THREE SEASONS; for, anciently, they reckoned only three. By the feven vafes are denoted the SEVEN DAYS of the week, or elfe the feven planets; and, in corroboration of this last conjecture, he refers to an image of Mithras engraved in another part of his Antiquities, near which are feven alters flaming to the honour of that deity. The representation of TIME and its various parts, by fymbolical figures, was a very common and a very natural practice with those ancient mythologifts who adored the sun, whose revolutions are the fountain and guide of all the divisions of time, as the supreme God! The TIARZE on the head of the priests, he observes, very much refemble those of the Persians going in proceffion in the bass-reliefs found at CHELMI-NAR, near the ancient Persepolis, to be seen in his fecond volume. The furrounding hieroglyphics, however, are evidently of Egyptian origin; fince the HAWK, which appears on one fide, and the IBIS, on the other, were birds holden in the highest veneration among the ancient Egyptians. Their being sculptured, together with the fymbols of the Perfian superstition, in this image, are irrefragable proofs of his antecedent affertion, that, at the period of its excavation, the Egyptian

tian and Persian devotion had begun to assimi-

Caves, and other fimilar fubterranean receffes, confecrated to the worship of the Sun, were very generally, if not univerfally, in request among nations where that superstition was practifed; and some of these caverns were full as curious in their conftruction. though possibly not so magnificent, as those of Media, Persia, and India. Various engravings of Mithratic caves in Media and Persia are to be met with in the travels of Le Bruyn and Sir John Chardin in the former of those countries. The mountains of Chufistan, in particular, at this day abound with stupendous excavations of this fort. From the higher Afia the veneration for facred caverns gradually diffused itself over Asia Minor. The lofty steeps of Parnassus, sacred to the Muses, were covered with caverns. The Sybil made her dark responses amidst the gloom of a cavern; and it was from the hallowed rock of Delphi that the priestess of Apollo, (the solar deity of Greece,) inspired with a holy fury, uttered those oracles, that were so widely celebrated in the ancient world. In the course

Confult the whole of Mountfaucon's ingenious remarks in the page of his supplement cited before.

of its progress from the East, this species of devotion so far infected even the Roman people, in the early periods of their empire, that they celebrated feafts in honour of Mithra, and dedicated an altar to that deity with this infeription, Deo invicto foli Mitbra. The reigning idolatry was vigoroufly attacked by those celebrated fathers of the church, the cloquent Tertullian and the more violent Jerome; the former of whom ridicales the votaries of that superstition under the term of knights, or foldiers, of Mithra; * while the latter brands the place of their worship with the title of the Den of Mitbra.+ The ancient prevalence, indeed, of the folar worship in Rome is evident from the facred reverence that prevailed for the veftal fire, which was kindled by the rays of the fun, and which the virgin priestesses, who attended it, kept continually burning in confecrated vafes. In fuch profound veneration was this ballowed flame holden, that the accidental extinction of it was supposed to be the fatal prefage of the most dreadful calamities to the empire. Virgil represents Æneas, the

Mithra fignat in frontibus milites suos, lib. i. cap. 1, de Baptismo.

⁺ Mithræ Spelæum, epift. ad Lætam, cap. li.

[217]

the vaunted progenitor of the Romans, as zealously preserving this sacred fire amidst the surrounding conflagration of Troy;

Æternumque adytis effert penetralibus ignem.

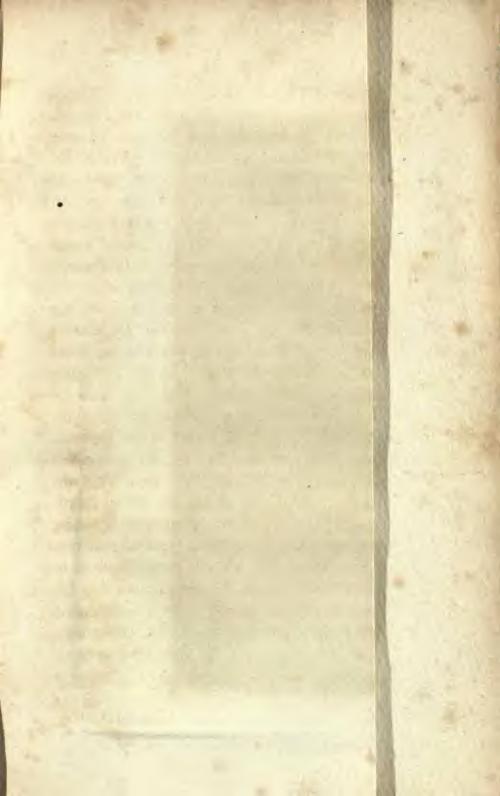

Virg. Æneid. il. 297.

The worship of Mithra, which still continued to be practised by some devotees, was finally proscribed at Rome, by order of Gracchus, præsect of the prætorium, in the sourth cen-

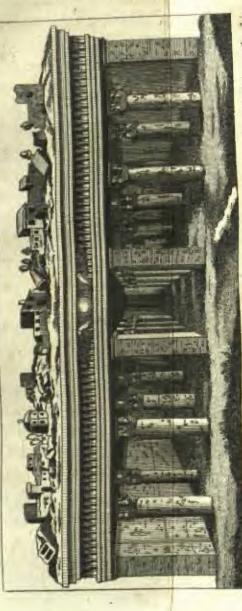

tury.

Allufive to this kind of cavern-temple and this species of devotion, there is a remarkable passage in Ezekiel,* where the inspired prophet in a vision beholds, and in the most sublime language stigmatizes, the horrible idolatrous abominations, which the Ifraelites had borrowed from their Afiatic neighbours of Chaldaa, Egypt, and Persia. And be brought me, fays the prophet, to the door of the court; and when I looked, behold A HOLE IN THE WALL. Then faid he unto me, fon of man, dig now in the wall; and, when I had digged in the wall, behold a DOOR. And be faid unto me, go in, (that is, into this CAVERN-TEMPLE,) and behold the wicked abominations that they do there. So I went in.

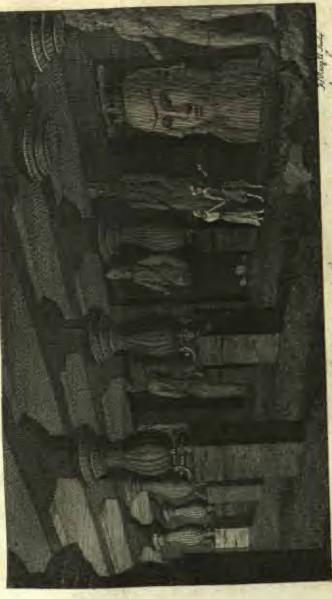

in, and faw; and behold, every form of creeping things, and abominable beafts, and ALL THE IDOLS of the boufe of Ifrael, were POURTRAYED UPON THE WALL ROUND ABOUT. In this fubterraneous temple were feventy men of the ancients of the bouse of Ifrael, and their employment was of a nature very nearly fimilar to that of the priefts in Salfette; THEY STOOD WITH EVERY MAN HIS CENSER IN HIS HAND, AND A THICK CLOUD OF INCENSE WENT UP. Then said be unto me, son of man, bast thou seen sobat the ancients of the bouse of Israel do IN THE DARK, every man in the CHAMBERS OF HIS IMAGERY? In Egypt, to the particular idolatry of which country, it is plain, from his mentioning every form of creeping things and abominable beafts, the prophet in this place alludes, these dark secluded recesses were called MYSTIC CELLS, and in them were celebrated the fecret mysteries of Isis and Oficis, reprefented by the quadrupeds facred to those deities, who, after all, as has been repeatedly afferted in this Differtation, are only personifications of the sun and moon. Those, who are still inclined to contend for the superior antiquity of Egypt above all nations of the earth, will, from this circumstance, probably join with Warburton in infifting that the MITHRATIC

The Vefidule of a most ouper b temple at DINDARA, the ancient TENTARA, in Upper Egypt.

sculptures On the extensive summit of the temple the ARABIANS have erected a confiderable Town The major columns forty feet high half buried in the sands and charged with hieraglyphic

ELEPHANTA, and of the more conspicuous mythologic SCULPTURES nagoda a typerspecture view of the inside of the grand covernwhich decorate the walls of that pageda RITES themselves were established in imitation of those of Isis and Osiris. But since by Osiris was fymbolized the SOLAR SPHERE, and, by his affectionate confort Ifis, the LUNAR ORB, illumined by his ray, or, as fome mythologists explain it, the TERRESTRIAL GLOBE, made fruitful by his generative warmth, we must look for the origin of this splendid devotion to that primæval country where the host of heaven and the elements of nature were first venerated; and whence the Sabian superstition darted throughout the world that beam of transcendent, but delusive, brightness which dazzled the eyes of the infatuated human race, and induced them to mistake and adore the grand receptacle of light for the Source of Light himself! Before this work shall be concluded, the ample retrospect, which my fubject will compel me to take of the Chaldaic theology and sciences, will have a direct tendency to establish the truth of the hypothesis, which makes Chaldaea the original fource of the Sabian error, and the central region in which it most vigorously flourished. For, upon what other hypothesis shall we account for the universal and immemorial prevalence of this superstition in every region of the earth? how shall we explain so singular a phænomein which the fages of the East took up their residence, were the doctrines there promulgated. Their theology was veiled in allegory and hieroglyphics; their philosophy was involved in a circle of symbols. All the sublime wisdom of Asia, however, was concentrated and displayed in the CAVE OF MITHRA, which, we have observed from Porphyry, represented THE WORLD, and contained expressive emblems of the various elements of nature.

I have offered very forcible arguments to prove, that the excavations of Salfette and Elephanta were no other than stupendous temples, in which the rites of that deity, though probably under a different appellation, were performed. As corroborative evidence of my affertions in that respect, I have given, in a preceding fection, the description of two august temples to the sun; the one of astonishing splendour, in Guzzurat, which was visited by Apollonius Tyanæus, in his voyage to India, at fo remote a period as eighteen hundred years ago: and the other affirmed, in the Ayeen Akbery, to have been erected by an ancient rajah, and not less remarkable for its magnitude and beautiful sculptures than the former for its splendour. But since the caverns of India are undoubtedly

undoubtedly of a date far anterior to the age of the fecond Zoroafter, or Zaratusht, who flourished in the reign of Darius Hystaspes, and who, according to Porphyry, " First of all, in the mountains adjacent to Persia, consecrated a natural cave in honour of Mithra, the father of the universe:"* and, fince Zoroaster consecrated that cavern, after bis vifit to the Brahmins of India, and when he had already been inftructed in the profound arcana of that aftronomical science, for which they were so distinguished in antiquity; there arises, from this collective evidence, proof little less than demonstrative, that certain mysterious rites and ceremonies, congenial with their astronomical and theological speculations, were instituted and celebrated in these caverns at a period prior to those celebrated in any of the neighbouring regions. Although the circumstances above stated are highly in favour of such an hypothefis, yet it might appear prefumptuous in me to affert, that these mysterious celebrations were the real origin of ALL THOSE MYSTIC RITES which, in fucceeding ages, throughout Asia as well as Europe, in Persia, in Greece, and in Rome, passed under the various denominations of Mithriac, Orphic, Eleufinian.

[.] Porphyrius De Antro Nympharum, p. 254-

Eleufinian, and Bacchie; and the more fo, because a very profound critic in ancient Egyptian literature* has afferted, as an incontrovertible fact, that the most early mysteries instituted in the world were those of Egypt in honour of Ilis and Oliris. When, however, we confider the high and acknowledged antiquity of the GEETA, and other Sanscreet productions, in which those mysteries are evidently glanced at; when we attend to the form in which the caverns themselves are excavated, and compare them with what we read, in ancient authors, of the form of the Egyptian and Grecian temples, supernal or fubterranean; above all, when we confider the hieroglyphic sculptures and astronomical fymbols, with which both the Egyptian and Indian temples were adorned; we possibly shall not be over-hasty in acceding to the positive affertion of that learned but dogmatical writer. Indeed, an hypothesis directly subversive of Warburton's may with every appearance of reason be maintained; and, before this volume shall be concluded, very convincing testimony may refult from this investigation, that the mylteries of both Ofiris and Mithra are only copies of the ancient worship of Surya, the

SOLAR

^{*} See Warburton's Divine Legation, vol.i. p. 135.

SOLAR FIRE, which originally was adored in Chaldaea, or Syria, as the noblest object in nature, and as the purest symbol of Deity in the whole extent of creation.

The subject itself alludes to periods too remote, not to be involved in the deepest obfeurity. It is principally by analogy that our refearches-must be guided and our decision regulated. I proceed, therefore, to shew, that, in these caverns, apartments were constructed exactly similar, and symbols were elevated uniformly correspondent, with those which were anciently provided, in the mystic cells of Egypt, for the celebration of the rites of Ifis, and in the gloomy fubterraneous recesses facred in Greece to Ceres, the great mother of all things, or the vivific principle in nature personified. Plutarch,* who travelled into Egypt for the purpose of obtaining information upon the subject, and who has largely investigated, and in great part explained, the doctrines inculcated by the priefts ofthat country, concerning Isis and Ofiris, in regard to the form of their temples, in which these mysteries were performed, expressly deferibes them, as, in one place, avenuevan es; Thea was decues unasteres was watages, extending VOL. II.

Plutarch, de Ifide et Ofiride, p. 639. Steph. edit.

into long wings and fair and open avenues; and, in another, ROUNTA RAI GROTIA RATA PRE εχουτών σολιστηρια Θηδαιοις εοικοτα και σηκοις, as having fecret and gloomy subterraneous vestries, refembling the adyta of the Thebans. Exactly thus arranged were the Indian caverns. Mr. Hunter informs us, " that, on entering Elephanta, you are led, first of all, into a verandah, or colonnade, which extends from east to west fixty feet; that its breadth from north to fouth is fixteen feet; and that the body of the cave is on every fide furrounded by fimilar verandahs;"* and, in refpect to its dark recesses, Niebuhr observes: " Près de D, (sur le plan, + tab. 3,) il y a des appartemens obscurs : où, dans la saison que j'ai été voir ce temple, il y avoit encore de l'eau, qui vient fort à point aux vaches qui se rendent ici. Près d'E, il y a un grand appartement pareillement obscur." With respect to the symbols that adorned the mystic cell of Egypt, they are all supposed to be accurately arranged in that celebrated monument of antiquity, called the ISIAC or BEMBINE TABLE, which exhibits at one view, under various

Archeologia, vol. vii. p 287.

[†] Voy. en Arab. tom. ii. p. 28, where fee that plan

bestial and human figures, the deities adored in Egypt, but which, as has been conjectured by those learned antiquarians, who have written concerning its age and defign in a more particular manner, alludes to the mystic rites of Ifis and Ofiris. Of this curious and valuable remain, a short account from Pignorius, whose edition of it is in my possession, may not be unacceptable to my readers. It was a table of brafs, four feet in length, and nearly of the same diameter; the groundwork of the plate confilted of a black enamel, with filver plates curiously inlaid, on which were engraved a variety of emblems, divided into different classes and compartments, with hieroglyphic characters intermixed; the centre contained the human figures, or rather gods in human shape, some standing, some in motion, fome fitting on thrones, to whom other human figures are making offerings or performing facrifices. Two of these figures, diffinguished by the facred ibis and the hawk's head, are evidently intended for Isis and Osiris; but even, without that distinction, the conspicuous figure, which the sacred bull, the known fymbol of Ofiris, makes on this table, fufficiently points out the deities, in illustration of whose rites it was designed. The border. P 2

border, that furrounds the whole, is crowded with figures of birds, beafts, and fishes, agreeing very nearly, both in number and shape, with the various animals afferted by the ancients to have received divine homage in the different cities of Egypt. Before most of thefe are human figures, delineated in postures of profound adoration. This valuable relic of ancient art, on the plunder of Rome by the army of Charles the Fifth, about the year 1 527, became the property of a common artificer,* and was fold by him to Cardinal Bembo, by whose name it has since been frequently diftinguished. At the death of that cardinal, the TABLE OF ISIS came into the peffeffion of the Duke of Mantua, in whole family it was preserved as an inestimable rarity, till the palace of Mantua was plundered of its immense treasure of curiosities by the imperial general in 1630, fince which period the original has not been heard of; though, owing to the zeal of those profound antiquaries, Pignorius and Mountfaucon, the literary world is in possession of two exact copies of it, with some curious strictures by each of those writers. The figures of the gods.

[·] Vide Pignerii Menaæ Isteæ Expositio, p. iz. Edit. Amst. 1669.

gods, or deified mortals, in the middle of this table, might possibly be intended for a representation of those sculptures that adorned the body of the mystic temple, in the same manner as the Indian deities, or god-rajahs, are arranged along the centre part of the walls of Elephanta; while the animals peculiar to Egypt, pourtrayed on the surrounding border, might, like those peculiar to India on the cornices of the same temple pagoda, be symbols of the various constellations; and the kneeling sigures, emblematical of the worship paid to them.

After confidering the form and some of the decorations, let us attend to the mysterious rites celebrated, and the doctrines themselves propagated, in these sacred recesses. I offer it, with diffidence, as my humble opinion, that the grand basis of all the theological dogmas inculcated, at least in those of India. was the Mereudosusis, or transmigration of the human foul, and I am fo fortunate as to be able to support that opinion by the express declaration of Porphyry, that the Metemplychosis was one of the first doctrines taught in tois To Miden must poors, in the myffic rites of Mithra, which is only the Afiatic appellation of the African Ofiris. Now the Me-P 3 tempfychofis

tempsychofis was a doctrine, invented, by the philosophers of the ancient world, for the direct purpose of vindicating the mysterious ways of Providence, and removing all impious doubts concerning the moral attributes of the Deity; which, if permitted to take root, they knew must have been attended with the most baneful effects in society. But the doctrine of the existence of the human soul in a prior state naturally induced the supposition of its existence in a future sphere of action; and, while those diligent observers of mankind beheld the unequal distribution of human happiness and misery, while they beheld VIR-TUE frequently groaning under the bondage of oppression, and VILLANY as frequently clothed in regal purple, they were not only confirmed themselves in that judgment, but endeavoured to impress the awful truth upon the minds of others. If this argument should not hold good in regard to all the philosophers of Greece and Rome, as in the case of certain bold fceptics and prefumptuous fophists among them, the little knowledge I have acquired of the theologic fentiments, of the inflexible virtue, and fevere penances, of the Hindoo philosophers, has convinced me, that to them it is perfectly applicable. The profeffed

feffed defign, then, both of the Indian, the Egyptian, and Eleufinian, mysteries, was to restore the fallen soul to its pristine state of purity and perfection; and the INITIATED in those mysteries were instructed in the sublime. docurines of a supreme presiding Providence, of the immortality of the foul, and of the rewards and punishments of a future state. But the Brahmins, in their profounder speculations on the being and attributes of God, initiated their pupils into mysteries still more refined: they inculcated upon their minds the necessity, resulting as a natural consequence from that doctrine, of not only restraining the violence of the more boifterous paffions, but of entirely subduing the gross animal propenfities by continued acts of abstinence and mortification, and of feeking that intimate communion of foul with the great Father of the universe, which, when at its most elevated point of holy transport, is in India denominated the absorbed state. In India, I say, for this ενθεσιασμος of the foul, those mortifications of the body, and that subjugation of the passions, ever have been, and are at this day, carried to fuch a height of extravagance as is absolutely inconceivable by those who have not been spectators of it, and is such as

far

far exceeds the most boasted austerities of Romish penitents. I shall, in a succeeding chapter, lay before the reader some circumstances of voluntary penance undergone by the YOGEES, or devotees of India, that cannot fail to excite equal horror and aftonishment in his mind. For the present I shall content myself with giving a few pasfages, that relate to the Indian doctrine of the Metempsychosis and the Unity of God, from the three Sanfcreet publications, fo often alluded to in the course of this Differtation; fince those publications are doubtless the most authentic source of all possible information upon Indian antiquities; and fince one of them, the GEETA, was unquestionably written in the very earliest ages of the world, and, at all events, many centuries before the ages of Pythagoras, Socrates, and Plato.

In that sublime Episode, which, Mr. Wilkins informs us, the Brahmins consider as the repository "of all the grand mysteries of their religion," the doctrine of the Metempsychosis was probably first promulgated to mankind in the following passages. "As the foul, in this mortal frame, findeth infancy,

youth,

Preface to the Geeta, p. 23.

youth, and old age; fo, in some future frame, will it find the like" Bhagvat-Geeta, page 26. " As a man throweth away old garments and putteth on new, even fo the foul, having quitted its old mortal frames, entereth into others which are new." " Death is certain to all things which are subject to birth, and regeneration to all things which are mortal." "The former state of beings is unknown, the middle state is evident, but their future state is not to be discovered." Ibid. page 37. - In these passages, the doctrine of the transmigration itself is clearly established: let us confider it in the afcending scale, as holding out a reward for virtuous actions. " A man, whose devotions have been broken off by death, having enjoyed, for an immenfity of years, the rewards of his virtues in the regions above, at length is born again in fome respectable family; or, perhaps, in the house of some learned YOGEE." Ibid. p. 67. This species of devotees, whose prescribed routine of penance and prayer has not been fully completed, feems alluded to in another part of the Geeta, under the character of those, " who obtain the regions of Eendra, the prince of celestial beings, in which (inferior) heaven (as in Mahomed's paradife) they

they feast upon celestial food and divine enjoyments; and, when they have partaken of that spacious heaven for a while, in proportion to their virtues, they fink again into this mortal life." P. So. " Wife men, who have abandoned all thought of the fruit which is produced from their actions, (that is, who are actuated by a total indifference in regard to terrestrial concerns, and are absorbed in contemplation of the Deity,) are freed from the chains of birth, and go to the regions of eternal happiness." P. 40. "The YOGEE, or devotee, who, labouring with all his might, is purified of his offences, and, AFTER MANY BIRTHS, MADE PERFECT, at length goes to the supreme abode." Ibid. p. 67. "Know, O Ariun, that all the regions, between this and the abode of Brabm, afford but a transient refidence; but he, who findeth me, returneth not again to mortal birth." P. 75. Let us now confider the doctrine of the Metempfychosis in the descending scale, or as a punishment of vicious actions. " There are two kinds of deftiny prevailing in the world; the divine destiny is for Moksh, or eternal abforption in the divine nature, and the evil deftiny confineth the foul to mortal birth. Those, who are born under the influence of the

the evil destiny, know not what it is to proceed in virtue or recede in vice; they fay the world is without beginning, without end, and without an Eeswar (supreme God), that all things are conceived by the junction of the fexes, and that LOVE is the only cause." The principles of the SEEVA BUKHT feem here to be cenfured by Kreefhna, who, we have often before observed, is the incarnate representative of the very deity, VEESHNU, by whose name the other great fect of Hindostan is distinguished. " These LOST souls, and men of little understandings, having fixed upon this vision, are born of dreadful and inhuman deeds, for the destruction of mankind; they trust to their carnal appetites, [most probably the true fource of the devotion paid to the Lingam,] which are hard to be fatisfied, are hypocrites, and overwhelmed with madness and intoxication. Because of their folly, they adopt false doctrines, and continue to live the LIFE OF IMPURITY; therefore I cast down upon the earth those furious abject wretches, those evil beings, who thus despife me, into the wombs of EVIL SPIRITS and UNCLEAN BEASTS. Being doomed to the wombs of Asoons, (fallen rebellious spirits,) from birth to birth, at length, not finding me, they they go into the most infernal regions." Geeta, p. 115, 116, 117. In the infernal regions, however, they are not doomed to languish in misery for ever, since the Hindoo system of theology allows not of the doctrine of eternal torments; but, after a certain period, the delinquents are called forth again to begin anew the probationary journey of souls, and are all to be finally happy.

There is a very curious, though fomewhat obscure, passage, in the eighth division of this most ancient collection of divine precepts, that strongly corroborates the opinion, which I ventured to offer in a preceding page, that the feven BOOBUNS, or spheres of purification, through which, according to Mr. Halhed, the transmigrating soul is doomed to pass, had a direct allusion to the seven planets; it is as follows. " Those holy men, who are acquainted with Brahm, departing this life in the fiery light of day, in the bright feafon of the moon, within the fix months of the fun's northern course, go unto him; but those who depart in the gloomy night of the moon's dark feafon, and whilst the fun is yet within the fouthern part of his journey, afcend for a while into the regions of the moon, and again return into mortal birth." Ibid. p. 76.

VSGS

To this prevailing doctrine of the Metempfycholis, a doctrine indifputably propagated in the schools of India long before it was promulged in those of the Egyptian and Grecian philosophers, a variety of expressions occurring in a drama, exhibited according to an author by no means favourable to the high chronological claims of the Brahmins, at the court of an Indian monarch, above 2000 years ago, * and representative of men and manners, who flourished a thousand years before even that period, decidedly point. " In thy paffage over this earth, where the paths are now high, now low, and the true path feldom diftinguished, the traces of thy feet must needs be unequal; but virtue will press thee right onward." Sacontala, p. 49. "Perhaps," fays the king Dushmanta, " the fadness of men, otherwife happy, on feeing beautiful forms and listening to sweet melody, arises from fome faint remembrance of past joys and the traces of connections in a former flate of existence." Ibid. p. 55. In the following pasfage, we not only find this doctrine glanced at, but the strange sentiments entertained by the Hindoos, relative to the earth and its feven deeps, as described in the geographical treatife, authentically

[·] See the Preface to Sacontala, p. g.

authentically displayed. Of the infant son of Dushmanta, the divine Casvapa thus prophetically speaks: " Know, Dushmanta, that his heroic virtue will raise him to a dominion extended from sea to sea: before he has passed the ocean of mortal life, he shall rule, unequalled in combat, this earth with feven peninfulas." P. 97. As, in the extract from the Geeta, the reader has been made acquainted that the god Eendra has an inferior heaven, or paradife, which is appointed for the refidence of those fouls whose penance has not been fully completed; fo, in the Sacontala, we read of " the superior heaven, and central palace of Veeshnu," p. 42; which proves their belief in a fucceffion of celestial mansions. The following passage, describing the occupations of the Brahmin candidate for perfection, is fo highly illustrative of what has been before remarked concerning the facred baths of purification and confecrated groves and caverns, that I cannot avoid transcribing it: " It becomes pure spirits to feed on balmy air, in a forest blooming with trees of life; to bathe in rills dyed yellow with the golden dust of the lotos, and to fortify their virtue in the mysterious bath; to meditate in caves, the pebbles of which are unblemished gems; and to restrain their

their passions, even though nymphs of exquifite beauty smiled around them: in this forest alone is attained the summit of true piety, to which other hermits in vain aspire." Geeta, p. 88.

It is remarkable, that this holy grove, the retreat of Brahmin hermits, is described as being fituate in the mountains of HERMAKOT, which is the Sanscreet name of IMAUS, that is, in that very range of mountains of which Naugracut forms a part, and in which I have already afferted the Brahmin religion once flourished in its greatest vigour. "That mountain," fays Matali, the charioteer of Eendra, " is the mountain of Gandharvas, named Heemaket: the universe contains not a more excellent place for the successful devotion of the pious." P. 87. In the same page, there follows a description of a devotee in the act of penance, which is in the highest degree interesting and affecting; and will hereafter be cited by me, as a proof to what an extreme point of severity they carried those penitentiary tortures, which they voluntarily inflict on themselves, to obtain absorption in BRAHME, or, in other words, eternal happiness.

The last passage which I shall extract from the Sacontala, relative to the journey of the migrating migrating soul, forms the concluding sentence of that beautiful drama, and is more decisive than any yet adduced: "May Seeva, with an azure neck and red locks, eternally potent and self-existing, avert from me the pain of another birth in this perishing world, the seat of crimes and of punishment." Ibid. p. 98.

That ancient and celebrated composition of VEESHNU SARMA, the Hectopades, is not less express upon the subject of the Metempsychosis. " It is faid, fate is nothing but the deeds committed in a former state of existence; wherefore it behoveth a man vigilantly to exert the powers he is possessed of." Heetopades, p. 6. This passage seems to furnish us with an explanation of the word destiny, in a preceding extract from the Geeta; for, if that word be understood in a literal sense, all human exertions must be of little avail. Mr. Wilkins explains the passage in this manner in a short note, in which he fays: "It is necessary to inform the" reader, that many of the Hindoos believe this to be a place of rewards and punishments as well as of probation. Thus, good and bad fortune are the fruits of good and evil deeds committed in a former life; therefore, to prevent the latter in a future life, the author afferts, It behoveth a man," &cc. Ibid. p. 296. "What elfe,

else, my friend, can this missortune be, but the effect of the evil committed in a prior state of existence? Sickness, sorrow, and distress, bonds and punishment, to corporeal beings, are fruits of the tree of their own transgressions."

P. 25. "In this world, raised up for our purisheation, and to prevent our wandering in the regions below, the resolution to sacrifice one's own life to the safety of another is attained by the practice of virtue." Ibid. p. 229. "The dissolution of a body foretelleth a new birth; thus, the coming of death, which is not to be passed over, is as the entrance into life." Ibid. p. 270.

Finally, let it be observed, that Mr. Wilkins explains the term Salvation, as " an union with the universal Spirit of God, and final exemption from mortal birth." Hectopades, p. 299.

After having produced these passages relative to the transmigration of the soul through the various animal mansions, let us consider the Metempsychosis in a still more exalted point of view; let us trace the progress of the soul up the grand sidereal LADDER of seven GATES, and through the revolving spheres, which, it has been observed, are called in In-

dia the BOOBUNS of purification. That the Hindoos actually entertained notions on this fubject entirely consentaneous with those propagated by the institutor of the Mithratic mysteries is evident from the concise, but obscure, passage just cited in page 236. If, however, in my humble attempt farther to illustrate this ancient dogma of the Indian school, I fhould not be able to produce so many extracts as directly elucidatory of this as of the former subject from the GEETA, I am in hopes the very curious and interesting intelligence, which I am now about to lay before the reader, and which merits his most attentive confideration, will, in a great measure, make amends for that defect. We must, therefore, once more revert to the hallowed cavern of the Persian deity, and to the page of Porphyry, who is the best expositor of the Mithratic theology. Porphyry himfelf was one of the profoundest critics and scholars that the schools of Greece ever bred, and deeply initiated in all the mystic rites of the ancient recondite philosophy and abstruse metaphysics. He acquaints us, that, " according to Eubulus, Zoroaster, first of all, among the neighbouring mountains of Perfia, confecrated a natural cell, adorned

adorned with flowers * and watered with fountains, in honour of MITHRA, the father of the universe. For, he thought a cavern an emblem of the world, fabricated by MITHEA; and, in this cave, were many geographical fymbols, arranged in the most perfect symmetry and placed at certain distances, which shadowed out the elements and climates of the world."+ Porphyry, in the preceding part of this beautiful treatife, had informed his readers that the ancients confidered the world as justly typified by a cavern, alluding both to the earthy and stony particles of which it is composed as well as its obscurity and concave form, and that the Perfians, intending mystically to represent the descent of the soul into an inferior nature, and its subsequent ascent into the intellectual world, initiated the prieft, or candidate in the Mithratic rites, in caverns, or places so fabricated as to resemble them. After the example of Zoroaster, he adds, it was the custom of other nations in succeeding ages to perform initiatory rites in dens and

Q 2 caverns,

Arbert, fortdam: I know not how otherwise to translate the word, and yet it appears fingular enough that a dark and harren cave thould be adorned with flowers.

[†] Vide Porphyrim de Antro Nympharum, p. 256, edit. Cabtab. oftavo, 1655.

caverns, natural or artificial; for, as they confecrated temples, groves, and altars, to the celeftial gods; but, to the terrefrial gods and heroes, altars alone; and, to the fubterraneous deities, vaults and cells: fo to the WORLD they dedicated avroa zas σπηλαια, caves and deps. Hence, he intimates, the Pythagoreans and the Platonists took occasion to call this world the dark cavern of the imprisoned foul. Plato, in the seventh book of his republic, in which he treats of the condition of man in the natural world, expressly says, Behold men, as if dwelling in a subterranean cavern : and he compares this terrene habitation to the gloomy refidence of a prison, through which the folar light, imitated by the fires that glow in the recesses of the cavern, shines with a bright and vivifying ray. The Homeric cave of the nymphs, which is the particular subject of his effay, was facred to the NATADS, because they prefided over fountains; those fountains, which, ever bubbling up in the caverns, were only the mystic emblem of the intellectual waters which fweeten and purify the foul contaminated with guilt. The fountains were also doubtless typical of the watery element, as was the fire of the great IGNEOUS PRINCIPLE, that subtle, active, ethereal, and reliftless, spi-

rit, which, diffused throughout the universe; embraces and animates its whole extent. The humid exhalations, which arise from the confluent waters, are an emblem of the fourth element, the air; while their bland and genial vapours ferve as nourishment to the ethereal beings who hover round, the guardian genii of the folemn retreat. To describe the marble urns and confecrated vales for the reception of the purifying honey, an article still of great request in the libations and other theological rites of India, and the vestments of purple woven by the nymphs, all mystical emblems used in the rites of initiation, and explained by Porphyry, would be of less immediate utility than to confider the aftronomical fymbols, of which, as I have curforily stated from another of their most celebrated philosophers. they were by no means destitute in the reprefentation of the stages of the Metempsychosis. From that author we learned that they erected in these caverns a high ladder, which had sa-VEN GATES, according to the number of the planets through which the foul gradually afcended to the supreme mansion of felicity, I must here observe that the word GATE, which is a part of Afiatic palaces by far the most conspicuous and magnificent, and upon Q 3 adorning

adorning of which immense sums are often expended, is an expression, that, throughout the East, is figuratively used for the mansion itself. Indeed it seems to be thus denominated with fingular propriety, fince, as those of my readers who have refided in Afiatic regions well know, it is under those GATES that conversations are holden, that hospitality to the paffing traveller is difpenfed, and the most important transactions in commerce are frequently carried on. Captain Hamilton, giving an account of Fort St. George, observes, " that the GATE of that town, called the fea-gate, being very spacious, was formerly the common exchange, where merchants of all nations reforted about eleven o'clock to treat of bufinels or merchandife." Aftronomy, deriving its birth in Afia, and exploring nature and language for new fymbols, foon feized upon this allegorical expression as highly descriptive of her romantic ideas, and the title was transferred from terrestrial houses to the spheres. Hence, in the Arabian astronomy, those constellations in the heavens, nearest which the moon, during her monthly revolutions, remains every night, are called the MANSIONS

OF THE MOON, * which, according to the Arabian computation, amount in number to twenty-eight, according to the Indian, to only twenty-feven, manfions; and these gates must, therefore, be confidered as houses, or spheres, through which the foul passes in her course to the centre of light and felicity. It may here be remarked that the expression occurs frequently in holy writ, often in the former fense, and sometimes even in the astronomical allusion of the word. In the former acceptation we read, in Esther, ii. 19, of the Jew Mordecai fitting in the king's GATE: in Lamentations, v. 14, that the elders have ceased from the GATE : and, in Ruth, iii. 11, it is used in a fense remarkably figurative; all the GATE (that is, house) of my people know thou art virtuous. In the second acceptation, the word as well as the attendant fymbol itself, to our aftonishment, occur in the account of Jacob's vision of the LADDER WHOSE TOP REACHED TO HEAVEN, and in the exclamation, THIS IS THE GATE OF HEAVEN. This circumstance

2 4 cannot

^{*} These MANSIONS OF THE MOON are, from Mr. Costard's Arabian astronomy, accurately marked on the celestiss globe, made and sold by Mr. George Adams, in Fleet-street, whose obliging kindness to the author during the composition of a work, in which astronomy and theology are so intimately connected, he thus publicly and gratefully acknowledges.

cannot fail of exciting in the reader the utmost furprise, since it is hence manifested to have been an original patriarchal fymbol, and will hereafter be brought by me in evidence that there was among the post-diluvian ancestors of the human race an astronomy older than has yet been proved to exist, and possibly tinctured with ante-diluvian philosophy. A fimilar idea occurs in Ifaiah, xxxviii. 10; I fhall go to the GATES of the grave; and in Matthew, xvi. 18; the GATES of bell shall not prevail against it: nor is it impossible but our blessed Lord himfelf might speak in allusion to the popular notion of the two aftronomical GATES celeftial and terrestrial, when, in Matthew, vii. 13, he faid, Enter ye in at the strait GATE; for, wide is the GATE and broad is the way that leadeth to destruction, and many there he robich go in thereat: because strait is the GATE and narrow is the way which leadeth unto life, and few there be that find it.

But let us return to the Homeric cave, concerning the fabrication, intention, and ornaments, of which Porphyry has given us a disquisition, which, however obscure it may appear from the very partial information on this subject which has descended to us from the ancients, will more than sufficiently serve

ther their profound aftronomical and metaphyfical speculations. This cave had two entrances, or GATES, as they are called even by Homer; the one of which looked to the south, the other to the NORTH.

> Perpetual waters through the grotto glide, A lofty GATE unfolds on either fide; That, to the north, is pervious to mankind, The facred fouth to immortals is confign'd.

On this passage the great philosopher remarks, "There are two extremities in the heavens : viz. the winter folftice, than which no part of heaven is nearer to the fouth: and the fummer folftice, which is fituated next to the north. But the fummer tropic, that is, the folfitial circle, is in Cancer, and the winter tropic in Capricorn. And, fince Cancer is the nearest to the earth, it is deservedly attributed to the moon, which is itself proximate to the earth. But fince the fouthern pole, from its great distance, is invisible to us, Capricorn is affigned to Saturn, who is the highest and most remote of all the planets, Again, the figns from Cancer to Capricorn are fituated in the following order; the first is Leo, called, by aftrologers, the House of the

Sun; afterwards Virgo, or the House of Mercury; Libra, of Venus; Scorpio, of Mars; Sagittarius, of Jupiter; and Capricornus, or the House of Saturn. But from Capricorn, in an inverse order, Sagittarius is attributed to Saturn; Pisces to Jupiter; Aries to Mars; Taurus to Venus; Gemini to Mercury; and, last of all, Cancer to the Moon. From among the number of these, theologists consider Cancer and Capricorn as two ports; Plato calls them two GATES. Of these, they affirm that Cancer is the gate through which fouls descend, but Capricorn that through which they alcend, and exchange a material for a divine condition of being. Cancer is, indeed, northern, and adapted to descent; but Capricorn is fouthern, and accommodated to ascent: and, indeed, the GATES of the cave, which look to the north, are with great propriety faid to be pervious to the descent of men: while the fouthern GATES are not the avenues of the gods, but of fouls afcending to the gods. On this account the poet does not fay it is the paffage of the gods, but of immortals, which appellation is also common to our souls, whether in their whole effence, or from some particular and most excellent part only they are denominated immortal. It is reported that

that Parmenides mentions these two PORTS in his book, concerning the nature of things; as likewise that they were not unknown to the Egyptians and Romans: for, the Romans celebrate their Saturnalia when the fun is in Capricorn; and, during this festivity, the fervants wear the shoes of those that are free, and all things are distributed among them in common; the legislator intimating, by this ceremony, that those, who are fervants at present by the condition of their birth, will be hereafter liberated by the Saturnalian feaft, and by the house attributed to Saturn, i. e. Capricorn; when, reviving in that fign, and being divested of the material garments of generation, they shall return to their pristine felicity and to the fountain of life. But fince the path beginning from Capricorn is retrograde, and pertains to descent; hence the origin of the word Januarius, or January, from janua, a gate, which is the space of time measured by the sun, while, returning from Capricorn towards the east, he directs his course to the northern parts. But, with the Egyptians, the beginning of the year is not Aquarius, as among the Romans, but Cancer: for, the star Sornis borders on Cancer, which flar the Greeks denominate Kuros, or the

the Dog. When this flar rises, they celebrate the calends of the month, which begins their year; because this is the place of the heavens where generation commences, by which the world subsists. On this account the doors of the Homeric cavern are not dedicated to the east and the west, nor to the equinoctial signs, Aries and Libra, but to the north and south, and particularly to those ports, or celestial signs, which are the nearest of all to these quarters of the world: and this because the present cave is facred to sours and to numpus, the divinities of waters."

A passage remarkably consonant to the preceding occurs in Macrobius, a writer profoundly versed in all the mysteries of the Oriental world.

"Pythagoras (fays that writer+) thought that the empire of Pluto began downwards from the milky way, because souls falling thence appear already to have receded from the gods. Hence he afferts that the nutriment of milk is first offered to infants, because their first motion commences from the Galaxy, when they begin to fall into terrene bodies.

^{*} Vide Porphyrius de Antro Nympharum, p. 265.

[†] Macrobius in Somnium Scipionis, lib. i. cap. 12, p. 61, edit. celt. Variorum. Lugd. Bat. 1670.

bodies. On this account, fince those who are about to descend are yet in Cancer, and have not left the Galaxy, they rank in the order of gods; but when, by falling, they arrive at the Lion, in this confellation they enter on the exordium of their future condition; because, in the Lion, the rudiments of birth and certain primary exercises of human nature commence. But Aquarius is oppolite the Lion, and presently sets after the Lion rifes! hence, when the fun is in Aquarius, funeral rites are performed to departed fouls, because he is then carried in a sign which is contrary or adverse to human life." In a fucceeding part Macrobius adds, "As foon, therefore, as the foul gravitates towards the body, in this first production of herself, she begins to experience a material tumult; that is, matter flowing into her essence. And this is what Plato remarks in the Phædo, that the foul is drawn into the body, staggering with recent intoxication, fignifying by this the new drink of matter's impetuous flood, through which the foul, becoming defiled and heavy, is drawn into a terrene fituation. But the starry cup, placed between Cancer and the Lion, is a symbol of this mystic truth, fignifying that descending souls first experience intoxication

toxication in that part of the heavens, through the influx of matter. Hence oblivion, the companion of intoxication, begins to creep into the recesses of the foul; for, if fouls retained in their descent to bodies the memory of divine concerns of which they were conscious in the heavens, there would be no dissention among men concerning divinity. But all, indeed, in descending, drink of oblivion; though some more, and others less."

This curious and mystical writer finally asferts: " The foul, therefore, falling with this first weight from the zodiac and milky way into each of the subject spheres, is not only clothed with the acceffion of a luminous body, but produces the particular motions which it is to exercise in the respective orbs. Thus, in Saturn, it energizes according to a ratiocinative and intellective power, which they call λογιστικου and θεωρητικου: in the fphere of Jove, according to the power of acting, which is called πρακτικον: in that of Mars, according to the order of courage, which is denominated θυμικεν: in the orb of the sun, according to a fenfitive and plantastic nature, which they call αισθητικον and φανταστικον: but according to the motion of defire, which is denominated ἐπιθυμητικον in the planet Venus; of pronoun-

cing and interpreting what it perceives, which is called iguarentines in the orb of Mercury: and, according to a plantal nature and a power of acting on body, which is denominated curison when it enters the lunar globe. And this fphere, as it is the last among the divine orders, fo it is the first in our terrene situation. For, this body, as it is the dregs of divine concerns, fo it is the first substance of an animal. And this is the difference between terrene and supernal bodies, (under which fast I comprehend the heavens, the stars, and the other elements,) that the latter are called upwards to be the feat of the foul, and enjoy immortality from the very nature of the region, etherial, pure, fublime; but the foul is drawn down to these terrene bodies, and is, on this account, reported to die when it is inclosed in this fallen region and the feat of mortality. Nor ought it to cause any perplexity that we have so often made use of that term, the death of the foul, which we have pronounced to be IMMORTAL: for, the foul is not extinguished by its temporal demerfion; fince, when it deserves to be purified from the contagion of vice, through its entire refinement from body, it will be restored to the

the light of perennial life, and will return to its pristine integrity and perfection."*

During the progress of this arduous undertaking it has been my misfortune to have toiled alone, or only affifted by fuch Sanfcreet publications as have yet feen the light under the fanction of Sir William Jones, Mr. Halhed, and Mr. Wilkins. Had the two latter gentlemen, who are the best Sanfcreet scholars now in Europe, deigned to honour my infant work with the fame notice which it has experienced from the great Orientalist, who is unfolding to the Afiatic world the mild laws of this country, and dispensing justice according to that noble fystem of jurifprudence, to the once-oppressed progeny of Hindostan, this production might possibly have come before the public less obscured with error and less unworthy of their applause. Upon the present curious and interesting topic, in particular, an occasional communication with these celebrated Indian scholars would, doubtlefs, have enabled me to throw new light, and in a higher degree to gratify excited curiofity. Happily, however, not deprived of the advantage of their productions, I proceed

Macrobius in Somn. Scip. cap. 12, p. 368, ejufdem edit.

I proceed to glean fuch feattered fragments of information as appear to me elucidatory of the fidereal migration of the foul aspiring after the raptures of divine absorption in BRAHME, the supreme good. " The Indians (fays Mr. Halhed) have in all ages believed in the transmigration of fouls, which they denominate KAYAPREWAESH and KAYAPELUT: this latter term literally answers to the word Metempsychosis. An ancient Shafter, called the Geeta, written by Vyafa, has a beautiful stanza upon the fystem of the Transmigration, which he compares to a change of drefs. Their creed, in this respect, is, that those fouls which have attained to a certain degree of purity, either by the innocence of their manners or the feverity of their mortifications, are removed to regions of happiness proportioned to their respective merits; but that those, who cannot fo far furmount the prevalence of bad example and the forcible degeneracy of the times as to deserve such a promotion, are condemned to undergo continual punishment in the animation of successive animal forms, until, at the stated period, another renovation of the Four Yugs, or grand periods, shall commence upon the dissolution of the prefent."

The preceding extracts have sufficiently evinced the truth of these observations by Mr. Halhed. With respect to the sidereal migration, we are obliged with the following additional intelligence.

"They suppose that there are sourteen belowed, or spheres, seven below and six above the earth. The seven inserior worlds are said to be altogether inhabited by an insinite variety of serpents. The earth itself is called Bhoor, and mankind who inhabit it Bhoor-logue. The spheres, gradually assending thence, are, I. Bobur, whose inhabitants are called Bobur-logue; 2. the Swergeh-logue; 3. the Mahurr-logue; 4. the Junneh-logue; 5. the Tuppeh-logue; 6. the Sutte-logue; The term logue, according to Mr. Holwell, signifies literally a people, a multitude, a congregation; and Dewtah-logue the angelic bost.*

"The Bobur is the immediate vault of the visible heavens, in which the sun, moon, and stars, are placed. The Swergeh is the first paradise and general receptacle for those who merit a removal from the earth. The Mahurr-logue are the Fakeers and such persons as, by dint of prayer, have acquired an extraordinary

^{*} Holwell, vol. ii. p. 35.

ordinary degree of fanclity. The Junnehlogue are also the souls of pious and moral men, and beyond this fphere they are not fupposed to pass without some uncommon merits and qualifications. The fphere of Tuppeh is the reward of those who have all their lives performed fome wonderful act of penance and mortification, or who have died martyrs for their religion. The Suttee, or highest fphere, is the refidence of Brahma and his particular favourites, whence they are also called Brahma-logue. This is the place of destination for those men who have never uttered a falfehood during their whole lives, and for those women who have voluntarily burned themselves with their husbands."*

To these fourteen spheres of reward and punishment the Geeta in various places directly, but obscurely, alludes. In that episode, Arjun, just ready to stain his sword with the blood of his relatives, assembled to oppose him in the field of battle, is checked by the restection that the regions of Naraka, the boobuns of serpents, " are provided for those who murder their relations." This, however, is not the only bitter restection to which his R 2

^{*} See the preface to the Code of Gentoo Laws, p. 46, editquarto, London, 1776.

painful fituation gives birth; the baneful confequences will extend to others, fince the dead themselves are affected by the crimes of the living. The forefathers of their flain brethren, "being deprived of the ceremonies of cakes and water offered to their manes, will fink down into the infernal regions." Geeta, p. 3. The ceremony of the Stradha, which is here alluded to, has been explained before; to which I shall now add, from Mr. Wilkins upon the passage, that, in those regions, the condemned are doomed to dwell " for a period proportioned to their crimes, after which they rife again to inhabit the bodies of unclean beafts." Both the aftronomical term and the allegorical allufion are in direct terms mentioned in the following passage. " There are three passages to NARAKA; lust, anger, and avarice, which are the destroyers of the transmigrating foul; wherefore a man should avoid them; for, being freed from thefe GATES OF SIN, which arise from the influence of the TAMA-Goon, (those who inculcate the worship of departed spirits,) he advanceth his own happiness, and at length he goeth the JOURNEY OF THE MOST HIGH." Geeta, p. 118.

In the passages before-cited, the word manfion, or abode, is frequently used; and it has been

THE MATSE AVATAR

The first Indian AVATAR, denominates that of MATER; representing the incarnation of VERSHAU in the form of A FIRM: Ein the Opinion of S. William Jones, pointedly ullimine to the GENERAL DELUCE.

been proved, that the superior Boobuns are not less the mansions of departed piety than those of Naraka are of the guilty. Concerning the superior Boobuns, there is one or two of those extracts so very express, that I must be permitted to bring them again before the eye of the reader; in particular I wish him to re-peruse that passage in which Kreeshna tells Arjun, that ALL THE REGIONS between this and the ARODE of Brahma afford but a transient refidence; and that in which the fame incarnate deity declares, that the virtuous shall be rewarded with " the REGIONS OF EENDRA, the prince of celestial beings, in which HEAVEN they feast upon celestial food and divine enjoyment." Geeta, p. 8o. "They, who are acquainted with day and night, know that the day of Brahma is as a thousand revolutions of the yugs,* and that his night extendeth for a thousand more: as, on the coming of that day, all things proceed from invisibility to visibility, so, on the approach of that night, they are all disfolved in that which is called invifible: even the universe itself, having exist-

R₃ ed,

The your are certain grand periods, allading to the revolutions of the heavenly bodies: they are in number four, and will be amply explained hereafter. The vanity of the Brahmin chronologifts has induced them to apply to terrefirial concerns the walt periods used in fidereal computation.

ed, is again diffolved; and now again, on the approach of Brahma's day, by the fame divine over-ruling necessity, it is re produced. That which, upon the diffolution of all things befide, is not destroyed, must be superior and of another nature from that visibility: it is invifible and eternal. He, who is thus called invifible and incorruptible, is even he who is called the supreme ABODE; which, men having once obtained, they never return to earth: that is my MANSION." Allufive, doubtless, to the transmigration of the foul through the feven fidereal abodes of spirits in the progress of purification, all finally terminating in the most sublime and exalted, Arjoon, in page 94 of the same episode, in this style of elevated piety, addresses the Supreme Being. " Thou, O mighty Being, greater than Brahma, art the prime Creator! eternal God of gods! the world's MANSION! Thou art the incorruptible Being, distinct from all things transient! Thou art before all gods, the ancient Poorusa, and the supreme supporter of the universe! Thou knowest all things, and art worthy to be known! Thou art the su-PREME MANSION; and by thee, O infinite Form! the universe was spread abroad." In page 75, recently cited, occurs that very curious passage quoted in a former part of this Differtation, as having an undoubted aftronomical allufion, and which I shall again infert with the addition of the context, fince it appears very evidently to inculcate a doctrine not only congenial with that of the Greek philosophers; but with the hypothesis of the two principles of LIGHT and DARKNESS, or rather GOOD and EVIL, in the Perfian code of philosophical theology. " I will now (continues Creefhna) fpeak to thee of that time in which, should a devout man die, he will never return; and of that time, in which, dying, he shall return again upon the earth. Those holy men who are acquainted with BRAHME, departing this life in the fiery light of the day, in the bright feafon of the moon, WITHIN THE SIX MONTHS OF THE SUN'S NORTHERN course, go unto him; but those who depart in the gloomy night of the moon's dark feafon, and whilft THE SUN IS VET WITHIN THE SOUTHERN PARTS OF HIS JOURNEY, ascend, for a while, into the regions of the moon, and again return to mortal birth. These two, LIGHT and DARK-NESS, are esteemed the world's eternal ways. He, who walketh in the former path, (of light, or piety,) returneth not; whilst he, who walketh in the latter path, (darkness, or evil.) R 4

evil,) cometh back again upon the earth."
Geeta, p. 76. It is impossible to avoid observing, in this passage, the origin of the doctrine of the Two PRINCIPLES of the Persian
philosophers, with which nation, it has already been observed, the Indians had an immemorial intercourse.

Market and the second of the

SECTION

SECTION VI.

In this fort intervening Section, which prevents the immediate Continuation of the History of the ancient Mysteries, some remarkable Testimonies, in Proof of the above Affertions, are brought from certain scarce and valuable Manuscripts, which have been imported into Europe by learned Oriental Travellers, and which contain Engravings, executed in India, illuftrative of their ancient Doctrines in regard to the Metempsychofis, as well as of the early Periods of their History .- A Description of one very curious astronomical Plate, which represents the Convulsion of Nature at the General Deluge, or the Courma AVATAR .-A Digression on that Subject, proving that all the three first Avatars, or Incarnations of the Deity, are astronomical Allegories allustive to that calamitous Event.

THE passages presented to the reader in the preceding section are not the only ones in which the gradual ascent of the soul through

through the planets, or spheres of purification, is plainly intimated in the Geeta. They are however sufficient for our purpose, and, in proof that the Indians actually had, in the remotest æras, in their fystem of theology, the fidereal ladder of feven gates, fo univerfally made use of as a symbol throughout all the East, I have now to inform the reader of the following circumstance: - there exists at prefent, in the French king's library at Paris, a book of paintings entirely allufive to the Indian mythology and the incarnations of Veeshnu, in one of which is exhibited this very fymbol, upon which the fouls of men are represented as ascending and descending, according to the received opinion of the fidereal Metempfychofis in Afia. Of this curious volume a friend at Paris has procured me very minute information, and I have hopes of prefenting my readers with a correct copy of this painting before these extensive Differrations shall have been concluded.

Two other books, adorned with similar paintings, illustrative of Indian subjects, which are in the possession of the literati of this country, deserve, in this place, particular notice. The first is that in the Bodleian library, presented to the University of Oxford by Mr.

Pope, and affirmed, in the letter of that author which accompanied the donation, to contain " one hundred and feventy-eight portraits of the Indian rajahs, continued down to Timur, and the Great Moguls his fuccessors, as far as Aurungzebe." The account of this book by Mr. Cleland, prefixed to Dr. White's and Mr. Davy's translation of the Institutes of Timur, establishes the authenticity of it; for, " that the pictures it contains are not fancy pictures there is this folid reason to believe, it being well known that fuch a fet of pictures actually exists in the royal palace." He adds, " it is observable, that the Moorish or Mohamedan fovereigns of Hindostan are, in this collection, diffinguished from those of Gentoo descent by the fathion of the skirts of their robes, which, in the Gentoos, hang on each fide, cut at the bottom into an angular form. as all the rajahs wear them at this day for an enfign of royalty."+ From this book I hope to obtain the permission of the University to engrave the portraits of some of the more diftinguished characters that have fwayed the imperial

^{*} These are the words of Mr. Pope's letter, written in the year 1737, and inserted in the Preface to the Institutes of Timur.

⁺ See the Preface to Dr. White's Inflitutes of Timur.

imperial sceptre of a people, who, with their august sovereigns, have been hitherto so little known; of a people, who, in the remote and beautiful regions of Hindostan, for many ages, seem to have shunned all intercourse with their fellow-mortals, and, at present, are very inaccurately delineated on the historic page in proportion to the importance and extent of their vast empire in Asia, to the confummate wisdom of their policy, and the diftinguished splendour of their exploits.

The remaining volume, which merits our prefent notice, and will claim our more particular attention hereafter, is that in the posfession of the Society of Antiquaries in London, presented, I believe, by Mr. Hastings, and which, if I may judge from a furvey of it, permitted me by the obliging attention of the fecretary of that fociety, is entirely upon the fubject of the nine incarnations of the god Veeshnu. In rather a transient review of its contents I was particularly struck with a minute delineation of the COURMA AVATAR, or Veeshnu's descent in the form of a tortoise to support the earth finking in the ocean, and of the curious Indian historical fable of the Soors and Asoors churning that ocean with the mountain Manda, Around this vast moun-

tain the ferpent Asookee is represented as twined in dreadful folds, by way of a rope, at the head and tail of which those imaginary beings are pulling with all their might, to make the churned deep difgorge the precious things swallowed up in a certain great deluge, which, notwithstanding all sceptical oppofition, was undoubtedly the deluge of Noah. The above circumstances must appear so very romantic to the reader, that, as some period will still elapse before I can proceed to the historical detail and explanation of the Avatars, I shall insert a few lines, illustrative of it from Mr. Wilkins's translation of that part of the Mahabbarat in which it occurs, and which he will find in page 146 of the Geeta. This account, adduced immediately from fuch high and respectable authority, will at once ferve to gratify curiofity and refcue myfelf from censure in enumerating particulars fo wildly theological, but still fo absolutely necessary to be known to the reader before he can obtain the full comprehension of the ancient Sanscreet history of Hindostan; it will likewise afford a specimen of the romantic style in which that first and most celebrated Indian history is written.

Prefatory

Prefatory to this extract I must observe, that the Soors, being affembled in tolemn confultation upon the fparkling fummit of the great golden mountain MERU, or SOMMEIR. afferted, in the Geographical Differtation, to be fituated in the centre of our globe, and to be of the altitude of at least 16,000 YOJANS,* were meditating the discovery of the AMREE-TA, or water of immortality, under which allegory is shadowed out the re-animation of nature after the general defolation made by the deluge. The fea was to be deeply agitated by the impetuous rotation of the mountain Mandar; but, as the united bands of Dewtahs were unable to remove this mountain, they went before Veeshnu, who was fitting with Brahma, and addressed them in these words: " Exert, sovereign beings, your most superior. wisdom to remove the mountain Mandar, and employ your utmost power for our good." Veeshnu and Brahma having replied, " It shall be according to your wish:" HE, with the lotos eye, directed the king of ferpents to appear. Ananta arose, and was instructed in that work by Brahma, and commanded by Narayen

^{*} The NOIAN is an ancient Indian measure, in extent about four miles.

Narayen to perform it. Then Ananta, by his power, took up that king of mountains, together with all its forests and every inhabitant thereof; and the Soors accompanied him into the presence of the Ocean, whom they ad-' dreffed, faying, " We will flir up thy waters to obtain the Amreeta;" and the lord of the waters replied, "Let me also have a share, feeing I am to bear the violent agitations that will be caused by the whirling of the mountain." Then the Soors and Asoors spake unto Courma-rajah, the king of the tortoifes, upon the strand of the ocean, and said, " My lord is able to be the supporter of this mountain." The tortoile replied, "Be it so!" and it was placed upon his back.

"So the mountain being set upon the back of the tortoile, Eendra began to whirl it about as it were a machine. The mountain Mandar served as a churn, and the serpent Vasookee for the rope; and thus, in sormer days, did the Dewtahs, the Asoors, and the Danoos, begin to stir up the waters of the ocean for the discovery of the Amreeta. The mighty Asoors were employed on the side of the serpent's head, whilst all the Soors assembled about his tail. Ananta, that sovereign Dew, stood near Narayen.

"They now pull forth the ferpent's head repeatedly, and as often let it go: while there iffued from his mouth, thus violently drawing to and fro by the Soors and Afoors, a continual stream of fire, and smoke, and wind; which afcending in thick clouds replete with lightning, it began to rain down upon the heavenly bands, who were already fatigued with their labour, whilst a shower of slowers was shaken from the top of the mountain, covering the heads of all, both Soors and Afoors. In the mean time the roaring of the ocean, woilft violently agitated with the whirling of the mountain Mandar by the Soors and Afoors, was like the bellowing of a mighty cloud. Thousands of the various productions of the waters were torn to pieces by the mountain, and confounded with the briny flood; and every specific being of the deep and all the inhabitants of the great absis which is below the earth were annihilated; whilst, from the violent agitation of the mountain, the forest-trees were dashed against each other, and precipitated from its utmost height, with all the birds thereon; from the violent confrication of all which a raging fire was produced, involving the whole mountain with smoke and flame, as with a dark blue cloud and the vivid flash of lightning.

The lion and the retreating elephant are over-taken by the devouring flames, and every vital being and every individual object are confumed in the general conflagration. The raging flames, thus spreading destruction on all sides, were at length quenched by a shower of cloud-borne water poured down by the immortal Eendra. And now a heterogeneous stream of the concocted juice of various trees and plants ran down into the briny flood. It was from this milk-like stream of juices, produced from those streams, trees, and plants, and a mixture of melted gold, that the Soors obtained their immortality."*

Concerning these extravagant mythological details of the Hindoos, I must remark, that however mysterious the allegory, and however wild and romantic the language in which it is clothed, this fact may be depended upon, that there, in general, lies concealed at the bottom some physical meaning or deep theological truth. Divested of its instated diction and fabulous incidents, the invention of an Oriental sancy, what can this general and stupendous convulsion of nature;—the mountain buried in the tempestuous bosom of the ocean; the ocean roaring and raging amidst the con-

^{*} Geeta, p. 146, 147, 148.

flict of contending elements; the torrents of descending rain poured down by Eendra, the Hindoo good of the firmament; the total annihilation of every living thing on the mountain, and of all the inhabitants of the great abysis which is below the earth; (an expression very fimilar to the Scripture-phrase of all the fountains of the great deep;) - what can all this accumulation of magnificent and dreadful images shadow out except the desolation of the earth during the period of the universal deluge; when the Soors and Afoors, who may be confidered as the ætherial ministers of the divine vengeance, were commissioned to harass the agitated globe? What can the incarnation of Veeshnu, the preserving power of India, in the form of a vaft tortoile, which incarnation conflitutes the fecond or COURMA AVATAR, to support the ponderous mass on the strand of the ocean, portend, but the benevolent intervention of Providence, perfonified by the incarnation of Veethnu, to fave from total destruction a perishing world? Who is that physician so renowned in ancient Sanscreet histories, the great Dew Danwantaree, who at length rose from the churned ocean, the white foam of which refembled milk, bearing in his hand a facred vafe full of

the water of life, and who himfelf is even represented in some of those histories as a transformation of Veelhnu, who, I fay, is to be understood by that fictitious character, unless the venerable fage who rose from the ocean, who gave new life to his expiring species, and in his family upheld the human race: that pious patriarch, who, after his emerging from the hoary deep, builded an altar unto the Lord, and offered the first grateful oblation after the deluge; (circumstances recorded amidst the constellations of the Southern sphere;) that mythologic character, who is represented upon it as the Jacrificer of the beaft; that profound philosopher whose knowledge of the ante-diluvian aftronomy enabled him to form that sphere, and who placed THE SHIP, by Grecian mythologists usurped, and ridiculously called Argo, there? The Greeks, however, remarkably corroborating my hypothesis, denominated this afterium of the sacrificer CHI-RON, whom Pliny describes " as the fon of Saturn (TIME) and Phillira, the inventor of the BOTANICAL and MEDICAL art."* And justly may the SACRIFICER be denominated Chiron, that true Chiron of antiquity, though not of Grecian origin, nor the preceptor of Achilles :

Plinii Nat. Hill lib. viii. cap. 56.

Achilles; that great botanist, who first planted the vine and returned to the ground that infinite variety " of medical berbs and innumerable feeds," which, in the ancient Sanfcreet histories, and particularly in Sir William Iones's translation of the BHAGAVAT, MENU is represented as taking into the ark for the express purpose of renovating decayed vegetation after the deluge; that nobler CENTAUR, who was indeed born of a cleud, in the fame manner as the Chinese Fohi is represented in their histories to have had a rainbow for his progenitor; who, as the name Centaur properly fignifies, first tamed the fierce bell, and who, having taught mankind the use of agriculture, was thence not only represented in all the Oriental mythologies by the apt fymbol of the BULL, but, if M. Anquetil, in the Zend-Avesta, may be credited, in the ancient Persian histories, was called l'homme-toureou.* Such is the true meaning of this Avatar; and fuch, in my humble opinion, is the true Danwantarce of India, who fprang from the foam of the churned ocean, bearing the Amreeta, or vital ambrofia, to the renovated world. I would not be understood, however, to have afferted that Danwantaree and Noah are the fame

[&]quot; See M. Anquetil du Perron's Zend-Avesta, tom.iii, p. 363.

fame person, except in a mythological sense; for, Menu, or Satyaurata, who was the author of the samous Institutes, at first orally promulgated by that legislator, afterwards committed to writing, and called after him Menumeriti, is the undoubted and only genuine Noah of India; but I mean, that, under the character of Danwantaree rising from the ocean, this venerable personage is intended and symbolized. According to M. Sonnerat, he is generally depicted in the pagodas, sacred to Veeshou, as a learned man, in profound meditation, with a book in his hand.

with any farther explanation of his meaning, confesses himself to be of opinion, that a considerable portion of this particular Avatar relates to astronomy. For my own part, I entertain little doubt but that the serpent Asookee, whose enormous body enfolded the globe, is no other than the celestial serpent, or dragon, whose baleful influence is represented in all Oriental systems of astrology to be so fatal to the revolving spheres, or else that whimsical representation of a still more visionary dragon, formed by the course of the moon near the ECLIPTIC, of whose BELLY, HEAD, and TAIL, is exhibited, in a preceding page, an astrono-

mico-

mico-mythological engraving. By this allegory, do not the Brahmin aftronomers mean to indicate that some dreadful position of the planetary orbs, which are often represented, in Sanscreet writings, as personified Dewtahs, occasioned the grand convulsion; or that some fatal ECLIPSE, which ever happens near that region of the heaven where their fancies have fixed their imaginary Dragon, portended and accompanied it? Surely the supposition of fuch an event, as a fecondary cause, proves neither bad theology nor despicable philosophy to exist in Hindostan; for, notwithstanding fome difficulties in Whiston's system, that a comet paffed at that remote æra near the orbit of the earth, and caused the inundation, that hypothesis is not destitute of able advocates. But we see that, by this relation, a devouring fire, as well as a tempeltuous ocean, contributed to the general devastation. Is it not posible, that some of the more ancient Sanfcreet books may contain, traditionally handed down, a genuine and circumstantial relation of this awful event? But, if that should not be the case, is not this account entirely conformable to the ingenious conjectures of the great naturalist Mr. Whitehurst, who is decidedly of opinion, that fire, burfting from the internal regions of the earth, greatly contributed to bring on the dreadful catastrophe in which nature agonized and a world was destroyed. Mr. Whitehurst does not stand single in this opinion. His supposition is cogroborated by one of the greatest chemists of the age, Warson, a name on which titles can confer no additional splendour. A more full investigation, however, of this point, and some others of equal novelty and importance to the theological and literary world, must be referved for that portion of this history which treats of the cosmogony of the Hindoos.

Since the Avatars themfelves, that is, the descents of the deity in a human form, may be considered as connected with, if not as originally giving birth to, the doctrine of the Metempsychosis; for, with the Indians, that deity is confidered only as the Anima Mundi, or Soul of the World, of whom the particular definition in the Bhagavat is, that " HE IS EVERY WHERE ALWAYS;" it will not be thought entirely digressive, if, while upon this fubject, I pursue somewhat farther the reflections to which the Courma-Avatar has given birth. Truth, therefore, compels me to add, to what has been already observed, that the more minutely the three first Avatars are examined. \$ 4

mined, the more directly will each of those Avatars be found to be illustrative of the great event above alluded to: while the united evidence, arifing from them, reflects a light upon that event greater than has yet radiated upon it from any page of Gentile antiquity. "They all three," fays the prefident of the Afiatic Society, "apparently relate to some stupendous convulsion of our globe from the fountains of the deep."* In direct proof of Sir William's affertion, I shall, in this place, fomewhat recmaturely, present the reader with a print of the first of those Avatars, which was copied by one of the Roman missionaries from the walls of an Indian pagoda, on which the ten transformations of Veelhnu were delineated in the fuccessive order in which they take place. In justice to myself I must remark, that this print properly belongs to the first volume of my history, in which all the Avatars are distinctly described, and most of them engraved; but as it is posible that the increased sum, at which I have been obliged to fix the price of these volumes, may unfortunately deprive me of the continued patronage, throughout the work, of some of my subferibers, I here, with grateful attention, fubmit a duplicate of the plate for their particular accommodation and inspection.

The following are in brief the outlines of the allegory, extracted from the Bhagavat, where may be found the passage from the same book cited above.

Near the close of the last CALPA, (a period of duration of astronomical origin, and refering to the rate of the precession of the equinoxes, but stated in the Surya Siddhanta as equal to a thousand malia yugs, or grand revolutions,) BRAHMA, fatigued with the care of fo many worlds, fell into a profound flumber. During this flumber of the creator, the strong dæmon or giant Hayagriva came near him, and stole the VEDAS: those four facred volumes which originally flowed from the lips of the quadruple deity. With this inestimable treasure he retired into the deep and fecret bosom of the ocean; and, refolving never to furrender the booty he had fecured, fwallowed the stolen Vedas. Deprived of the vigilant care of Brahma, the world fell into diforder; while, no longer guided by the light that emanated from the facred books, the human race became, to the last degree, corrupt. They were all confequently destroyed in a vast deluge, except a certain pious king and his family, which, in

very fingular conformity to the relation of Sacred Writ, confifted of feven perfons, who floated upon the waters in a veffel fabricated according to the express direction of Veeshnu. For, this pious monarch, one day performing his devotions on the shore of the ocean, was forewarned of the approaching calamity by that preferving deity; and having prepared a veffel, as commanded, at the appointed time, Veeshnu appeared again in the form of a fish, " blazing like gold, and extending a million of leagues, with one stupendous horn," to which the king fastened the vessel by a cable composed of a vast serpent, and was thus towed in lafety along the furface of the raging element. When the waters abated, he and his companions were again fafely landed. Veeshnu then, re-plunging into the ocean, flew, in conflict, the tremendous dæmon Hayagriva, and, rending open the moniter's belly, recovered three of the Vedas, but the fourth, according to the allegory, was digested. - The plate annexed discovers Veeshnu rising from the ocean after vanquishing the dæmon, whose head, decorated with horns like those of all other princely personages in Oriental mythology, is feen floating upon the waves below. Veefhnu appears as if prefenting the facred books.

books, which he had thus recovered, to Brahma, who is discerned above. The third, or Bara Avatar, is not less pointedly allusive to the same awful event. In this incarnation Veeshnu assumes the form of a BOAR, and lifts up upon his huge tusks the ponderous globe, which another dæmon, (an agent ever present in Hindoo mythology,) equally gigantic and malignant, after rolling it up like a scroll, had carried away on his shoulders, and buried deep in the abyss.

The meaning of all this is so obvious as to preclude the necessity of insisting, in this place, how clearly the affertion of Sir William Jones, as to the three first Avatars, is demonstrated. I shall return, therefore, in the next section, to the farther consideration of that curious doctrine, the Metempsychosis, to which, probably, that of the Avatars originally gave birth, and of the ancient mysteries, in which its stupendous arcana were unveiled.

SECTION VII.

The Subject of the Metempsychosis, and the AN-CIENT MYSTERIES, refumed. - The former Dostrine the Source of all the borrible Penances which the Hindoos undergo in the Hope of regaining their State of primitive Perfection and Happiness. - The Fall of Man, therefore, a Doctrine necessarily believed in India .. The Nature of the Deity, and his Attributes, unfolded in the Mysteries by physical Symbols, as, for Instance, bis creative Energy by the Phallus, or Lingam; bis spotless Purity by the τα θεια Φωτα, or transparent Orbs of dazzling Brightness; &c. &c. - A still sublimer Theology, however, somewhat resembling the Patriarchal, pervaded the Afiatic World, and particularly flourished in the School of the great Indian Philosopher VYASA. - The fecret Operations also of Nature berself, when confidered distinctly from the Great First Cause, as well in the superior as the subterraneous World.

World, engroffed a Part of the ancient Mysteries, and the Effects of physical, not less than moral, Good and Evil were successively and powerfully displayed. - The physical Symbol illustrative of the creative Energy, in the End, produced the most unbounded Licentiousness .-The Women of the Idol, a Species of boly Prostitutes, the Refult in India; the Bacchie Revels and Debaucheries, the Confequence in Greece, a Nation which borrowed its Theology from INDIA through some Medium bitherto inadequately explored. - The feveral Stages of the Eleufinian Mysteries described from Greek Writers who had been initiated. - Their Analogy to the facred Festival-Pomps of India, as painted in the Pagodas, and as at this Day celebrated in various Parts of India, adduced as unequivocal Evidence of their baving originated in the latter Country.

ROM the collective evidence exhibited in the preceding pages, the affertion with which I commenced these particular strictures on the Metempsychosis, that the professed design of it was to restore the fallen soul to

its pristine state of purity and perfection, is proved beyond contradiction. Thus, an interefting and aftonishing prospect unfolds itfelf to our view. Their facred writings, we fee, represent the whole universe as an ample and august theatre for the probationary exertion of millions of beings, who are supposed to be fo many spirits degraded from the high honours of angelic distinction, and condemned to afcend, through various gradations of toil and fuffering, until they shall have reached that exalted fphere of perfection and happiness, which they enjoyed before their defection. Animated by the defire of obtaining that final boon, and fired by all the glorious promises of the Vedas, the patient Hindoo fmiles amidst unutterable misery, and exults in every dire variety of voluntary torture. In the hope of expiating former crimes by adequate penance, and of regaining speedily that fancied Elysium, he binds himself to the performance of vows which make human nature shudder and human reason stagger. He passes whole weeks without the smallest nourishment, and whole years in painful vigils. He. wanders about naked as he came from the womb of his parent, and fuffers, without repining, every vicifitude of heat and cold, of driving

driving form and beating rain. He stands with his arms croffed above his head, till the finews fhrink and the flesh withers away. He fixes his eye upon the burning orb of the fun, till its light be extinguished and its moisture entirely dried up.* It is impossible to read the following minute description of one of these devotees in the act of stationary penance, as given in the Sacontala, without shuddering. Every circumstance enumerated fills the mind with increasing horror, and freezes the astonished reader to a statue, almost as immoveable as the fuffering penitent. Dufhmanta asks; "Where is the holy retreat of Maricha?" - Matali replies, " A little beyond that grove, where you fee a pious YOGEE, motionless as a pollard, holding his thick bushy hair, and fixing bis eyes on the folar orb. - Mark, his body is balf-covered with a white ant's edifice, made of raifed clay; the skin of a snake supplies the place of his facer -. dotal thread, and part of it girds his loins; a number of knotty plants encircle and wound his neck, and furrounding birds nefts almost

^{*} Every circumstance enumerated above is particularized and was feen by Tavernier in India. See Voyage de Tavernier, tom. iv. p. 118, edit. 1713, with an engraving annexed. I shall, in a future page, state some still more wonderful, but well-authenticated, relations of Indian mortification.

cover his shoulders." Sacontala, p. 87. Bat I am anticipating a subject upon which I must hereafter enlarge, when I come to compare the ancient Gymnosophist and the modern Yogee. But to what fource is this dectrine of spirits fallen from their original reclitude, a doctrine which not only infected India but all the Eastern world, to be traced? One probable fource of it has been already stated to have originated in the anxiety of the ancient philosophers, to justify the divine attributes, and vindicate the ways of God to man; but the more probable fource feems to have been fome obscure and corrupted tradition of the fallen angels, handed down through fuccessive generations from the great progenitor of the human race, and his immediate descendants, with whom celellial spirits are represented as frequently converling, and to whom they might, as a friendly warning, have imparted the intelligence. If this mode of accounting for the origin of so fingular a doctrine should appear unfatisfactory, much more fo must every other prove; for, after all, one indubitable fact must still be admitted in this kind of discussion, viz. that what belongs to past or future scenes of existence can only be known

known to mankind through the MEDIUM OF REVELATION.

No precepts so severe as these were indeed taught by the divines and philosophers of Egypt and Greece. Neither in the mystic cells of the former, nor in the Eleufinian fanctuaries of the latter, was the doctrine of the Metempsychosis carried to such an extreme point of speculative investigation as in the facred caverns of India; but that the precepts taught, and the rites celebrated, in both countries, were in a striking degree similar, will be more clearly manifested by the succeeding enumeration of particular parallel circumstances that diftinguished them. Immersed in the errors of polytheilm as was the great body of the Egyptian nation, it has yet been incontestably proved,* by the immortal Cudworth, that the hierophant, or arch-priest, in the secret rites of their religion, taught the doctrine of the unity of the Godhead; but this noble fentiment, though they had the magnanimity to conceive, they wanted the generofity to impart to the deluded populace; for, it was thought dangerous, both to the church and the state. to shake the foundations of the reigning su-VOL. II. perstition.

[.] See Cudworth's Intellectual System, chap. v. fect. 18.

perstition. But, to those speculative and philosophic minds, that possessed sufficient firmness to bear the communication of so losty and important a truth, the whole scene of vulgar delusion was laid bare, and the mystic veil, that obscured the "Great First Cause" from the view of his creatures, was rent asunder; while the initiated were taught, that Jupiter, Vulcan, Mercury, and the rest of the deities, who were the object of popular devotion, were nothing more than departed human beings, deisied by grateful posterity for the virtues they had practised during life and the benefits they had conferred upon mankind.

Mr. Hastings, one of the most early and liberal patrons of Sanscreet literature in India, in a letter to Nathaniel Smith, Esq. one of its most zealous encouragers in England, has remarked how accurately many of the leading principles of the pure unadulterated doctrines of Brahma correspond with those of the Christian system.* In the Geeta, indeed, some passages, surprisingly consonant, occur, concerning the sublime nature and attributes

See Mr. Haltings's recommendatory-letter to N. Smith, Efq. at that time chairman of the East-India Company, and prefixed to the GRETA.

tributes of God as well as concerning the properties and functions of the foul. Thus, where the Deity, in the form of Creeshna, addresses Arjun: "I am the Creator of all things, and all things proceed from me." "I am the beginning, the middle, and the end, of all things: I am time; I am all-grasping death, and I am the refurrection; I am the mystic figure OM! I am generation and dissolution!" Arjun, in pious ecstasy, exclaims: " Reverence! reverence! be unto thee a thoufand times repeated l Again and again reverence! O thou, who art all in all! infinite in thy power and thy glory! Thou art the Father of all things animate and inanimate I there is none like unto thee!" P. 95. And again, where Creeshna describes the nature of the foul: - " The foul is not a thing of which a man may fay it hath been, it is about to be, or is to be hereafter; for, it is a thing without birth, it is incorruptible, eternal, inexhaustible! the weapon divideth it not, the fire burneth it not, the water corrupteth it not, the wind drieth it not away; for, it is indivisible, inconsumable, unalterable!" P. 37. Sir William Jones has been at the pains of translating four stanzas of the BHAGAVAT, which, he fays, are fcrupulously literal, and T 2 which

which I shall take the liberty of transcribing, since they afford not only a striking proof of the sublime notions which the Hindoos entertain concerning the Deity, but exhibit a curious specimen of the style in which their facred books are written. The words, he observes, are believed by the Hindoos to have been pronounced to Brahma by the Supreme Being himself.

"Even I was even at the first, not any other thing; that which exists, unperceived, supreme; afterwards, I AM THAT WHICH IS, and he who must remain am I.

"Except the FIRST CAUSE, whatever may appear or may not appear in the mind, know that to be the mind's MAYA, (or delufion,) as light, as darkness.

"As the great elements are in various beings, entering yet not entering; (that is, pervading, not destroying;) thus am I in them, yet not in them.

"Even thus far may inquiry be made by him, who feeks to know the principle of mind, in union and separation, which must be EVERY WHERE ALWAYS."

Wild and obscure, Sir William observes, as these ancient verses must appear in a naked verbal translation, it will be thought, by many,

that the poetry of Greece and Italy affords no conceptions more awfully magnificent.* The first stanza brings irrefistably to our recollection that fublime verse of the Apocalypse; " I am ALPHA and OMEGA, the Beginning and the Ending, faith the Lord; which is, and which was, and which is to come, the AL-MIGHTY." I earnestly intreat the candid reader to take notice, that when, in various parts of this treatife, I have spoken of the pure and fublime theology of Brahma, I have constantly alluded to these and similar original passages in their most facred books, and not to those wild schemes of theology, engrafted upon it by commenting Brahmins, nor the complex and degrading system of devotion at present prevailing in Hindostan. Astonished at the striking similarity that subsists between the religious principles of the Hindoos and those of the Christian faith, the learned Hyde+ boldly pronounced, that BRAHMA must have been the patriarch ABRAHAM. Postellus, I however, had long before afferted the fame thing, with this additional circumstance, that the tribe of Brahmins were the descendants of

1 3

that

^{*} Afiatic Researches, vol. i. p. 246.

⁺ Hyde, Hist. Relig. vet. Perf. p. 31.

Abraham Postellus in Commentario ad Jezirah.

that patriarch by his wife Keturah, and were fo called, quafi Abrabmanes. He might, by parity of reasoning, have derived the name of the second great Indian, or Kattri, tribe from Keturah, from which it is not very diffimilar; but, in this case, unfortunately the same argument would hold good as that before-urged against the probability that Zoroaster was of Judaic extraction: the total filence of the Vedas in regard to circumcifion. The Arabs, who are descended from Abraham by Ishmael, and are likewife jealous of the invaded honours of the great patriarch their progenitor, contend that Brahma and Abraham are the fame, and Herbelot* informs us, that a Brahmin, named Behergir, converted to Mahommedism, communicated to those Arabs the book called L'Ambertkend, which he calls, Livre qui contient tous les Dogmes de la Religion des Indiens, but of which book I have not been able to gain any tidings, and the description feems alone applicable to the Vedas. A very interesting, and, if true, a very important, piece

^{*} See Herbelot Biblioth Orient, under the article Bebergir, in which a millake of this great Orientalist should be corrected, since he calls him. Un Brahman de la secte, ou de l'ordre, de ceux que l'on appelle Gioghis (Yogees). Now the Yogees are not Brahmins, but candidates for that order. My edition of Herbelot is that of Maestricht, 1776.

piece of historical information, is related in the " Account of the East-Indies," by Mr. Hamilton, fince it appears to account for a very large portion of those ten dispersed tribes; whole place of refidence, ever fince the period of their captivity, has fo long been the object of curious investigation among the learned. A colony of Jews, to the amount of no less than eighty thousand families, is afferted by that author, on the authority of the Dutch records at Cranganore, on the coast of Malabar, to have anciently flourished, in the kingdom of Cochin, under elders and judges of their own election. Their traditional history, which they anxiously preserve on copper-plates, deeply engraved in Hebrew characters, deposited in the sanctuary of the synagogue, relates, that their ancestors came thither before the downfal of the Babylonian empire; and that history descends, in a regular series of events, from the reign of Nebuchadnezzar to the present time. It announces them to be of the tribe of Manaffes, and describes their tedious journey of three years from Babylon to the coast of Malabar, the various sufferings which this miferable and exiled race, amounting to twenty thousand families, endured in their progress thither, the hospitable reception they TA

they met with from the natives, their thriving commerce, their increasing population, the period of their highest power and aggrandization, and that of their gradual decline, down to their present number, of about four thousand families only. A similar colony, if we may believe the Jesuits, established themselves in China.

Although I thought it incumbent upon me to mention these circumstances, yet I am cautious of urging any argument that may feem to arise from this evidence of the ancient intercourfe which the Indians enjoyed with the chosen people of God, for, polytheism has ever flourished with more vigour in the Peninfula than on the continent of India. From this fource, then, I dare not affert, that the Hindoos derived their purer theological tenets, fince those tenets appear to me to be of superior antiquity. It is only from Noan himfelf, their famed Menu, the great inspired prophet of the ante-diluvian race of mortals, and the august father of the prefent, or else from one or other of the fons of the righteous SHEM, who might make this happy region their early abode, that this unfathomable antiquity of the Brahmin scriptures allows me to derive the grand principia of their almost Christian theology; that august fabric, of which we observe the UNITY OF GOD forms the central pillar. This fublime doctrine of AN INVISIBLE, ETER-NAL, AND SELF-EXISTENT, GOD, WHOM ALL SYMBOLICAL REPRESENTATION MUST DE-GRADE, has ever been upheld by those among them who have dared to divulge a dogma kept profoundly fecret from the vulgar, whose fenfual conceptions, they imagined, were only to be actuated upon, and whose stubborn minds were only to be kept in facred fubjection to an arbitrary priesthood, by external objects, and who, confequently, were permitted to plunge by degrees into the lowest abyse of gross and multifarious idolatry. They were first suffered to adore the attributes of God under representative figures, decorated with emblematical ornaments; they were next allowed to pay divine honours to rajahs, in whom the Deity had condescended to become incarnate, and who were, therefore, supposed to be invefted with a portion of his divinity; for, the doctrine of the AVATARS, or descents of Deity in the form of man, undoubtedly, contributed to keep alive, if it did not originally give birth to, the belief of the Metempsychosis, as well as to cherish the errors of idol-worship in India. The fymbol in time came to be adored instead

instead of the Original, the rajah was honoured in the place of his Creator. The more artful and luxurious Brahmin, who, under the garb of aufterity and fanctity, fattened upon the spoils of superstition, beheld and exulted in the success of his project; he crowded the sculptured wall of the facred cavern with symbolical figures and statues of deified rajahs; he bade the people approach them with holy reverence, and he excited their wonder and refpect by recounting to them the heroic feats they had performed during the period of their fojourning with mortals. But this alone was not fufficient; terror has a more lasting influence than admiration upon the human mind. With the symbolic figures of the mercy and goodness of God were blended those of his justice and his wrath. As the former were sculptured with smiling aspects, and were decorated with the enfigns of peace and protection, so were the latter pourtrayed with horrible distorted visages, and arrayed with every dreadful symbol that could alarm and terrify the beholder. These figures, converted into dæmons, under the notion of being the avenging ministers of omnipotent justice, were most to the purpose of the priest. He recited their number, he magnified their enormous power,

and he awakened the agonizing terrors of his audience by impressing them with ideas of their constant and immediate interference in human affairs. To the gazing and infatuated multitude, who thronged the porches and the body of the august temple, he exclaimed: BEHOLD YOUR GOD: ! and the imagination was acted upon in the same manner as at this moment, in the motiern pagodas, by descriptive paintings, by expressive symbols, and mysterious ceremonies and exhibitions. But, in every successive age of the Indian empire, from its foundation to the present time, there have not been wanting Brahmins who spurned at the interested practices of their brethren, and who opposed, as far as they dared, the prevailing torrent of idolatry that so widely overspread the land. Among these, the great Vyasa, the Plato of India, holds the most distinguished rank; for, his defign in writing the Geeta, as Mr. Wilkins has told us in his elegant preface, feems to have been, " to undermine certain tenets inculcated in the Vedas, by fetting up the doctrine of the Unity of the Godhead in opposition to idolatrous facrifices and the worship of images; for, although the author dared not make a direct attack, either upon the prevailing prejudices of the people or the divine

divine authority of those ancient scriptures, yet, by offering eternal happiness to such as worship Branme, the Almighty, whilst he declares the reward of such as follow other gods should be but a temporary reward in an inferior heaven, for a period measured by the extent of their virtues, his intention, doubtless, was to bring about the downfal of polytheism.*

Similar to this conduct was that of the hierophant in the mystic cells of Egypt. The immortal Cudworth + has indeed ably vindicated the Egyptian priests from the charge of atheism; but still the people were kept in profound ignorance of that great truth, the UNITY OF GOD, which was thought dangerous to reveal, lest a contempt of the established system and the downfal of the popular superstition should be the fatal consequence. They permitted therefore the multitude to remain plunged as they were in the depth of a gross and complicated idolatry; but, for those philosophic few who could bear the light of truth, without being confounded by the blaze, they removed the mysterious veil,

[·] Preface to the Greta, p. 24.

⁺ See Cudworth's Intellectual System, chap. iv. p. 4, sect. i 8.

and displayed to them the Deity in the radiant glory of his unity. From the vulgar eye, however, these doctrines were kept inviolably facred, and wrapt in the veil of impenetrable mystery. They were denominated MYSTERIES, as well because the initiated were enjoined to keep the doctrines inculcated and the rites practifed in the fecret cell facred from the profane as because the former were constantly taught and the latter celebrated ev σκοτω και TURTS, in the bosom of darkness and in the dead filence of the night. This profound darkness, this midnight filence, they imagined, threw a kind of facred horror over their rites. and the priefts, both of Egypt and Athens, thought these a securer defence against intrufion than either the fecret depths of those fubterraneous caverns in which they were originally celebrated, or the lofty walls that, in fucceeding ages, encircled the fuperb temple of Ceres at Eleufis. In the extensive review which Warburton has taken of this subject, after mentioning the division of the Eleusinian mysteries into the GREATER and the LESS, after stating that in the LESS was inculcated the general belief of a Providence and of a future state, and that they were only preparatory to the GREATER, that celebrated investigator of thofe

those mysteries thus proceeds: " But there was one insuperable obstacle in paganism to a life of purity and holiness, which was the vicious examples of their gods. Ego, bomuncio, boc non facerem? was the absolving formulary, whenever a man had determined to give a loofe to his irregular appetites. There was a necessity therefore of remedying this evil, which could only be done by striking at the root of it; fo that, fuch of the initiated as were judged capable were made acquainted with the whole delution. The mystagogue taught them, that Jupiter, Mercury, Venus, Mars, and the whole rabble of licentious deities, were indeed only DEAD MORTALS, fubject in life to the same passions and vices with themselves; but, having been, in several instances, benefactors to mankind, grateful posterity had deified them; and, with their virtues, had indifcreetly canonized their vices. The fabulous gods being thus routed, the SUPREME CAUSE of all things, of course, took their place: him they were taught to confider as the Creator of the universe, who pervaded all things by his virtue, and governed all things by his providence. From this time, the initiated had the title of 'Emontage, or, one that fees things as they are, without difguise,

guife, whereas before he was called Mucre. which has a contrary fignification."* The reader will recollect, that there has been described, in the cavern of Elephanta, an interior recess, or facellum, which, while the exterior temple was crowded with mythologic fculptures, possessed no ornament whatsoever, except one folitary but degrading emblem of the great Creator. However degrading the fymbol, it was certainly intended to shadow out the one SUPREME DEITY and FATHER OF ALL. The exterior temple was, therefore, allotted for the performance of the blind and proftrate devotions of the multitude; and at the same time, it must be owned, that many of the divinities, whose images are graven on those walls, were as remarkable for licentiousnefs, in the mythologic histories of the Hindoos, as ever were those of the Egyptians and Greeks in their fabulous annals. The external temple was also appropriated, like the body of the mystic temples of Egypt, to the initiation of the younger Brahmins into the leffer mysteries of the Hindoo religion and fciences, as well as to the celebration of the fplendid rites of the former and the difplay of the wonderful arcana of the latter. The elder

^{*} Divine Legation, vol. i. p. 148.

Epoptai, were admitted into the internal fanctuary, and all the errors of vulgar polytheifm, as in the greater mysteries of Egypt and Eleufis, were laid bare to their view. The Deity broke forth in all the majesty of unity upon them, and the rising Sun of Truth distipated the clouds of deception and allegory.

However defective and inconclusive may be thought the arguments brought by Warburton in support of the general hypothesis, which he laboured to establish in the Divine Legation, and however particularly erroneous and fanciful may appear his strictures upon the fixth Æneid of Virgil,* in elucidation of the Eleufinian mysteries, yet, it must be owned, that he has displayed in that work a profundity of learning, and a splendour of genius, that scarcely ever before concentrated their rays to illumine one publication. Proud to follow fo exalted a guide, upon ground not altogether treacherous, I shall now proceed to state some farther particulars, which he has enumerated in relation to the present subject, and examine how far they may be compatible with

^{*} See a much more judicious account of that Æncid by Dr. Bentie in the Philaloph. Transact. Edinburgh, vol. ii. part ii.

with the religious rites and sciences of India. In the first place, in confirmation of what has been just now advanced, may be urged a pasfage, quoted by the bishop from Clemens, that, with the principles of theology taught in the mysteries, were actually blended those that relate to natural history and philosophy; fince that author expressly says, that the doctrines, delivered in the greater mysteries, treated concerning the universe, adding, " Here ends all instruction; things are seen as they are; and nature, and the things of nature, are given to be comprehended." The various mathematical fymbols, and other philosophical apparatus, that ornamented the Mithratic caves of the Brahmins, added to what we have already flated concerning their extensive affronomical investigations, and the doctrines relative to the mundane system, which Ammianus Marcellinus affirms they imparted to the Persian legislator, will be considered, I presume, as one strong proof of this affertion. But a still more decifive proof feems to arife from another passage, cited from Themistius, which describes the entrance of the initiated " into a region all over illuminated, and thining with a divine splendour," where the Autonton Αγαλμα, or felf-conspicuous image, the mystic YOL. II. emblem

emblem of the great vivifying principle of nature, diffused around an inconceivable splendour. In the fecond place, and what is more remarkably to our prefent purpose, may be adduced the attestation inserted from Proclus: that, in the celebration of the mysteries, the initiated met many things, of multiform shapes and species, that prefigured the first GENERA-TION of the gods. The principal symbol alluded to in this place will be obvious to the reader, fince by the gods are unquestionably meant the first race of deified mortals. The Sun, however, and elementary Fire are emblems of the Deity, fo frequently mentioned in ancient Sanscreet writings, and withal emblems fo much more noble than that in queftion, that I cannot avoid retaining my first opinion on the subject; that they were the most early symbols of Deity exhibited in these recesses, and that the one intimated is only a base substitution, derived from the degenerate devotion established in Egypt by Ham. Indeed, the passage cited before seems incontestably to prove this point. To this may be added another, quoted from the scholiast, in the Oracles of Zoroafter, in which it is declared, that he, who is fully initiated, beholds Ta Beia. Φατα, or the DIVINE LIGHTS. And furely THE

REFULGENT ORB OF DAY, furely that FIRE, which the Hermetic philosophers, in their enthufiastic strain, denominate the radiant child of the fun, are far more expressive, as they doubtless are more decent, emblems of the great generative and invigorating faculty of nature than that wretched device of a depraved mind. We have, however, feen the application of this fymbol in the rites of Isis; and, if Tertullian may be credited, the very fame indecent emblem was adored at Eleusis, and excited both the pointed ridicule and vehement reproaches of the fathers of the church. In fact, there can be but little doubt, and therefore it ought candidly to be allowed, that, originally, the pagan world, under the masculine symbol, worshipped, or pretended to worthip, as the Hindoos at this day avow, the first creative energy, and, under the feminine symbol, (for both symbols were adored in that proftituted fystem of religion,) was typified Ceres, the earth, the Dea Multimamma, the prolific parent of all things. Those, however, who thus emblematically represented the all-bounteous mother, the goddess of fertility, the bestower of fruits and grain, ought to have learned better, from a particular circumstance in the fabulous U 2 history

history of Ceres; for, when, in gratitude to the father of Triptolemus, she undertook the education of that youth, to hasten his maturity, the fed him in the day-time with divine milk, and by night the covered him all over with GENIAL FIRE. But a little reflection will foon convince us, that, as persons of either fex were promiscuously allowed to be initiated. when the original physical cause by degrees came to be forgotten, what a general diffipation, what a boundless immorality, would be promoted by fo fcandalous an exhibition! The feafon of nocturnal gloom, in which those mysteries were performed, and the inviolable fecrecy which accompanied the celebration of them, added to the inviting folitude of the fcene, conspired at once to break down all the barriers of modesty, to overturn all the fortitude of manly virtue, and to rend the veil of modelty from the blufhing face of virgin innocence. At length, licentious paffion trampled upon the most facred obstacles which law and religion united to raife against it. The Bacchanal, frantic with midnight intemperance, polluted the fecret fanctuary, and Proftitution fat THRONED upon the very altars of the gods. It is not my intention to stain these pages with a repetition of the enormous

enormous and aggravated impicties committed during the celebration of the mysteries of Bacchus at Rome, and so circumstantially recorded by the historian Livy,* nor the multiform impurities supposed to have been perpetrated in those of the Bona Dea; but the obscene abominations connived at in India. and even promoted by the more corrupt Brahmins, (I mean with respect to that ill-fated and proflituted race, denominated the WOMEN OF THE IDOL,) are too closely connected with the present unpleasing subject to be passed over in total filence. What I shall offer, on this curious subject, will be taken from two authentic books, written at very different periods, and therefore fully decifive as to the general prevalence of the institution from age to age; the Anciennes Rélations, and Les Voyages de M. Tavernier: the former written in the 9th, the latter in the 17th, century.

Incited unquestionably by the hieroglyphic emblem of vice, so conspicuously elevated and so strikingly painted in the temples of Mahabeo, the priests of that deity industriously selected the most beautiful females that could be found, and, in their tenderest years, with great pomp and solemnity, consecrated them

(as it is impiously called) to the service of the prefiding divinity of the pagoda. They were trained up in every art to delude and to delight; and, to the fascination of external beauty, their artful betrayers added the attractions arising from mental accomplishments. Thus was an invariable rule of the Hindoos. that women have no concern with literature, difpenfed with upon this infamous occasion. The moment these hapless victims reached maturity, they fell victims to the luft of the Brahmins. They were early taught to practife the most alluring blandishments, to roll the expressive eye of wanton pleasure, and to invite to criminal indulgence by stealing upon the beholder the tender look of voluptuous languishing. They were instructed to mould their elegant and airy forms into the most, enticing attitudes and the most lascivious gestures, while the rapid and graceful motion of their feet, adorned with golden bells and glittering with jewels, kept unifon with the exquisite melody of their voices. Every pagoda has a band of thefe young fyrens, whose bufiness, on great feltivals, is to dance in public before the idol, to fing hymns in his honour, and in private to enrich the treasury of that pagoda with the wages of proftitution. Thefe

These women are not, however, regarded in a dishonourable light; they are considered as wedded to the idol, and they partake of the veneration paid to him. They are forbidden ever to defert the pagoda where they are educated, and are never permitted to marry; but the offspring, if any, of their criminal embraces, are confidered as facred to the idol: the boys are taught to play on the facred infruments used at the festivals, and the daughters are devoted to the abandoned occupations of their mothers. The reader has, doubtlefs, heard and read frequently of the degeneracy and venality of PRIESTS, and we know, from Herodotus, what fcandalous proftitutions were anciently suffered* in honour of Mylitta; but a system of corruption, so systematical, so deliberate, and so nefarious, and that professedly carried on in the name and for the advantage of religion, stands perhaps unrivalled in the history of the world and the annals of infamy. It was by degrees that the Eleufinian worship arrived at the point of enormity above-recited,

I fay fuffered, because it does not appear that the profittotes, in the temple of this Assyrian Venus, were trained by the priests to rain: the whole account, however, is in other respects too similar. I do not choose to insert the scandalous particulars, but the reader may find them in Herodotus, lib. i. p. 62.

and the obscenities, finally prevalent, were equally regretted and disclaimed by the institutors; but, in India, we see an avowed plan of shameless seduction and debauchery; the priest himself converted into a base procurer, and the pagoda into a public brothel. The devout Mahomedan traveller, whose journey to India, in the ninth century, has been published by M. Renaudot, and from which account this description is partly taken, concludes the article by a solemn thanksgiving to the Almighty, that be and bis nation were delivered from the errors of insidelity, and were unstained by the enormities of so criminal a devotion!*

Nothing can be conceived more folemn than the rites of initiation into the greater mysteries, as described by Apuleius and Dion Chrysostome, who had both gone through the awful ceremony: nothing more tremendous and appalling than the scenery exhibited before the eyes of the terrified aspirant. After entering the grand vestibule of the mystic shrine, he was led by the hierophant, amidst surrounding darkness and incumbent horrors, through

^{*} See Anciennes Rélations, p. 88, and Voyage de Tavernier, livre i. chap. v. beginning at * Cette pagode est remplie de quantité de nudités,' &c.

through all those extended ailes, winding avenues, and gloomy adyta, mentioned above as equally belonging to the mystic temples of Egypt, Eleusis, and India. I have afferted before, that the Metempsychosis was one of the leading principia taught in those temples, and this first stage was intended to represent the toilsome wanderings of the benighted soul through the mazes of vice and error before initiation; or, in the words of an ancient writer quoted by Warburton from Stobæus: " It was a rude and fearful march through night and darknefs."* Prefently the ground began to rock beneath his feet, the whole temple trembled, and strange and dreadful voices were heard through the midnight filence. To thefe fucceeded other louder and more terrific noifes, refembling thunder; while quick and vivid flashes of lightning darted through the cavern, displaying to his view many ghaltly fights and hideous spectres, emblematical of the various vices, diseases, infirmities, and calamities, incident in that state of terrestrial bondage from which his struggling soul was now going to emerge, as well as of the horrors and penal torments of the guilty in a future state. At this period, all the pageants of vulgar idolatry.

all the train of gods, supernal and infernal, passed in awful succession before him, and a hymn, called the Theology of Idols, recounting the genealogy and functions of each, was fung: afterwards, the whole fabulous detail was folemnly recanted by the mystagogue; a divine hymn in honour of ETERNAL AND IMMUTABLE TRUTH was chanted, and the profounder mysteries commenced. "And now arrived on the verge of death and initiation, every thing wears a dreadful afpect; it is all horror, trembling, and aftonishment." An icy chilliness seizes his limbs; a copious dew, like the damp of real death, bathes his temples; he ftaggers, and his faculties begin to fail; when the scene is of a sudden changed, and the doors of the interior and fplendidlyillumined temple are thrown wide open. A " miraculous and divine light discloses itself: and shining plains and slowery meadows open on all hands before him." Accessi confinium mortis, says Apuleius,* et calcato Proserpinæ limine, per omnia veclus elementa remeavi; noche medio vidi solem candido coruscantem lumine: -Arrived at the bourn of mortality, after having trod the gloomy threshold of Proferpine,

I fhall

^{*} Калле, de тоте и deir дартрог, &с. Platonis Phad. p. 1224. Ficini edit. Francfort, 1602.

I shall conclude this prolonged account of the ELEUSINIAN MYSTERIES with mentioning a few particulars, which, added to what has been already faid, will, I conceive, leave little doubt remaining in the mind of the reader concerning the real and original country in which they were first instituted; unless indeed he should be inclined to believe so improbable a circumstance, as that the haughty and selffufficient Brahmin might have borrowed, from the remote region of Greece, the most facred and indispensable rituals of his religion. Of those various, tedious, and complex, ceremonies; as well as of the exact and fevere discipline which the Brahmin is compelled to toil through in the feveral stages of the CHAR ASHERUM, Or four Hindeo degrees, I shall treat amply in a future chapter; but it will be peculiarly illustrative of the present subject, to describe, in this place, the ablutions necessary to be performed by the BRAHMA-CHAREE, or Brahmin of the first degree. They are thus, verbatim et literatim, related in the Ayeen Akbery.* "The Brahmin bathes every morning before fun-rife. He begins his ablution with taking up in his right hand a little water, and fays, Pardon my offences! After

[·] Ayeen Akbery, vol. iii. p. 217.

[317]

After this, he throws away the water; then he rubs himself all over with earth; and, if he be in a river, dives three times, or else he throws water thrice over his body, and rubs himself with his hands. Next, he repeats the name of Goo, and afterwards thrice takes up in his right hand a little water, which he fips, and repeats certain prayers, during all which time he sprinkles water upon his head. Then, with his fore-finger and thumb, he ftops his nostrils, and, bowing down his face to the furface of the water, repeats another prayer, and then plunges again, or throws water over himself thrice. He then sprinkles seven times his forehead, breast, and shoulders: after this, joining his open hands, he fills them eight times with water, and throws it towards the fun, reciting a particular prayer. He then fips the water, and finally repeats the PARAYE-NAM." This, adds Abul Fazil, they call the ablution; and a very ample ablution the reader will, doubtless, esteem it. Let us now inquire what was the introductory rite of initiation practifed at Elcufis. The very first and most important ceremony in the leffer mysteries was the purification of the body BY WATER, intended to inculcate the necessity of a fimiliar purification of the foul from the im-

pure adhesions of vicious passions and propenfities; and, it is remarkable, that the officer affilting upon that folemn occasion was called Topavos, from vone, water. The fame ceremony of ablution was repeated on the initiation into the greater mysteries; for, according to Meurfius, whose account I do not possels, but whom Archbishop Potter,* in his extended account of this festival, has feduloufly followed, at the very entrance of the grand mystie temple the aspirant washed his hands in consecrated water; and Apuleius, who had been initiated, expressly fays, + Septies submerso fluctibus capite, quod eum numerum principivè religione aptissimum divinus ille Pythagoras prodidit. The very mention of Pythagoras, who is recorded in the Hindoo annals I to have visited India by this author, and his specifying the particular number feven, are two of the strongest testimonies

^{*} See Potter's Grecian Antiq. vol.ii. p. 390, edit. oft.

t Mr. Holwell acquaints us, I prefume from good authority, that both the Persian legislator and the Grecian philosopher made a long residence with the Brahmins, north-west of the Ganges, and that the names of Zardhurst and Pythagore are still remembered." as travellers in search of wisdom,"

[319]

monies that can be adduced in proof of the truth of the preceding remark.

The reader will not, perhaps, be displeased to paufe with me for one moment; and, while he confiders the number and variety of these ablutions, but especially the endless repetition of those of the Brahmin, he will ask, for what important cause was this tedious round of ablutions prescribed him? He will demand, in memorial of WHAT GRAND EVENT were thefe eternal bathings in rivers and tanks ordained? If it should be answered, they were intended as a memento of internal purity, and an incitement to preserve unspotted virtue amidst abounding vice; or, if they should be affirmed to have fprung from a laudable intention in the great legislator to promote external health and vigour of constitution in a dangerous and enervating climate; he will probably allow, in the institution, much solid wisdom and piety; and, in the practice, much substantial benefit. · But I will venture to affirm, that, independently of those momentous considerations, two other events, the most interesting and the most important in the annals of mankind, are meant to be fhadowed out, and the memory of them, by these rites, indelibly impressed and kept alive in the breast of the de-

votee: I mean, the CREATION of the WORLD, when Brahma or the spirit of God floated, in his lotos-bed, upon the waters of the Chaos; and the destruction of that world by a GENE-RAL DELUGE. This latter affertion will, undoubtedly, provoke a farcastic smile, at my ignorance, from those who have read, in the preface to the code of Hindoo laws, that the Brahmins deny that " the deluge ever took place in Hindostan;" an affertion, which Mr. Halhed, in a future edition, will probably cancel from his otherwife valuable and authentic page. Having, however, made this fubject, as well as the not less involved one of their wild chronology, objects of particular and of laborious investigation, I have the happiness to acquaint the reader, that a confiderable part of the first volume of the History of Hindostan is devoted to the elucidation of those points. I may take the liberty to add, without indulging an improper vanity, that, though it be far from wanting that additional support, the grand fabric of the Mofaic theology, so far from being shaken to its foundations by those Indian chimæras, that have fo widely gone forth into the world and have been propagated with such indecent zeal by some writers of a sceptical class, will, in the

the refult of the investigation, obtain a new column of adamant to uphold and adorn t. In fact, every fresh attack upon that majestic fabric tends only the more to prove its IM-PREGNABLE SOLIDITY, and cover its enemies with FRESH CONFUSION. Upon the present subject, I ought not to omit doing justice to one of the greatest scholars and the most ingenious men of the present age, who has fuggested the NOVEL, the PIOUS, and the FORCIBLE, remark, that the real foundation of all the mysteries celebrated in every country, from the period of their supposed commencement in Egypt to that of their final extinction at Rome in the prefecture of Gracchus, was a pious and grateful attempt of the first postdiluvian ages to commemorate the miraculous escape, under Divine Providence, of their immediate ancestors from the jaws of a watery grave, and their prefervation in the ark, fabricated by the direction of God. I shall take the liberty of transcribing a passage or two, from the second volume of the Analysis of Ancient Mythology, in illustration of the author's hypothesis. After afferting, that all the mysterious rites of the Gentile world appear to have been memorials of the deluge and of the events which immediately succeeded, Mr. X VOL. II.

Mr. Bryant adds, " Those mysteries, for the most part, consisted of a melancholy process; and were celebrated, by night, with torches. in commemoration of the state of darkness in which the great patriarch and his family had been involved."* In another place he takes notice, that " there was fearcely any circumstance, however minute, mentioned by Moses concerning the ARK and NOAH, but what was recorded in the family of Ham. It is faid of the patriarch, that he was a man of the earth, and skilled in planting and fowing, and every species of agriculture. When he constructed the ark, he made a window in it; through which, after a feafon, he looked forth and faw the ruins of the former world. He made allo a poor in the ark: which was a circumstance continually commemorated by the Gentile writers. The entrance, through it, they esteemed a passage to death and darkness; but the egress from it was represented as a return to life. And, as the residence in the ark was an intermediate state between a lost world and a world renewed, this was constantly alluded to in their symbolical representations."+ The reader will observe that the ingenious

^{*} See Bryant's Analysis, vol. ii. p. 331, 332, 333.

^{*} Bryant's Analysis, vol. ii. p. 237.

ingenious analyst, throughout his instructive work, supposes Noah to be the genuine Ofiris. He informs us, that, as the principal rites in Egypt were confelledly for a person lost and configned for a time to darkness, but who, after much bewailing and anxious fearch, was at length found, and supposed to be restoredto life, no allufion could possibly point more directly than this to the previous disappeara ance of the patriarch, to the perils and gloom with which he might well be supposed to be furrounded in the ark, and his confequent emerging and final restoration to light and fafety. He observes, that the emphatical expression of the musing, when purified, "I have escaped a sad calamity, and my lot is greatly. mended;" and, at the feath of Ifis, the exulting exclamation, Ευρηχαμέν, Συγχαιρομέν ! We bave found the lost OSURIS, let us rejoice together ! have also a decided reference to the same event: that, among many other circumstances corroborative of his polition, not the least convincing is the very ceremony adopted, during the efforts of the priefts to find the missing object of their research, that of a number of their body going down by night to the feashore, bearing a sacred scyphus, in which was a golden veffel in the form of a ship or boat, and

and into which they poured fome of the water of the river; that this being performed, the shout of tumultuous joy above-mentioned broke forth from the crowd, and that then Ofiris was supposed to be found.* He winds up the whole of his argument, by proying, from Plutarch, that this ceremony of inclosing Ofiris in his tomb, or ark, in memory of his having been in his life-time thus concealed to avoid the fury of Typhon, their known fymbol of the ocean, took place precifely upon the feventeenth day of the fecond month, after the autumnal equinox; that is, in fact, upon the very day on which the TRUE OSIRIS entered the ark, which, in Scripture, is faid to have taken place in the fix hundredth year of Noah's life, ON THE SECOND MONTH, AND ON THE SEVENTEENTH DAY OF THAT MONTH.

The Eleufinian aspirant, after ablution, was clothed in a linen vestment, the emblem of purity, and, we are informed, in the Indian register before-mentioned, that the Brahmin candidate, in the first stage of probation, was arrayed "in a linen garment without suture." But the mystic temple itself, as described by Apuleius,

^{*} Bryant's Analysis, vol. ii. p. 333, 334, 335-

[†] Aycen Akbery, vol.iii. p. 217.

Apuleius * was ades amplissima; according to Virruvius, it was immani magnitudine; and, according to Strabo, it was capable of holding as large a number as a theatre.+ If thefe feveral authors had intended to describe the pagodas of Salsette and of Elephanta, could they have done it with more characteristic accuracy? temples, of which the former, according to M. Niebuhr, is a square of 120 feet, and in the latter of which, if we are rightly informed in the feventh volume of the Archæologia, the grand altar alone is elevated to the aftonishing height of twenty-seven feet. The gloomy avenues furrounding them have been also particularized; in which an overwhelming dread and horror feized the benighted wanderer; and, with respect to the gaudy shows and splendid scenery occasionally ditplayed to the view of the initiated in their recesses; who, that beholds the superb decorations, the richly-painted walls, and carved imagery, in the modern pagodas; who, that confiders the beauty of the colours, and the ingenuity of the devices, conspicuous in many of the manufactures of India, whether in gold and X 3

[·] Apoleii Metamorph. vol. i. lib.ii. p. 271.

⁺ Strabonis Geograph, lib. iz. p. 380, edit. Bail.

and filver enamel, in boxes curiously inlaid with ivory, in carpets of filk richly flowered, and linens stained with variegated dies; can possibly entertain a doubt of the ability of the ancient Indians strikingly to pourtray, on canvas or otherwise, the allegorical visions, in which the genius of the nation takes so much delight; the amaranthine bowers, in which beatisfied spirits are supposed to reside, and the Elysian plains of EENDRA's voluptuous paradise?

The initiated, in the Grecian temples, were crowned with myrtle, and the Perfian priefts of Mithra, and consequently those of India, (for the fystem was the same,) were invariably decked with a rich tiara, wound about with the fame foliage. Thus arrayed, the arch-prieft, according to Herodotus, επαειδει θεογονεην, fang the theogony, or ode reciting the origin of the gods. The hierophant, that is, the revealer of facred things in the Eleufinian myfteries, was arrayed in the habit and adorned with the fymbols of the great Creator of the world, of whom, in those mysteries, he was supposed to be the substitute, and revered as the emblem. He was attended in his facred office by three affiftant ministers, of whom the first was called Aadagos, or the torchbearer :

bearer; he was intended to represent the Sux. The fecond was denominated Kapok, or the herald; he was confidered as the type of the planet MERCURY. The third was called 'O im Bana, or the minister of the altar, and he was venerated as the fymbol of the Moon. The same characteristic distinctions doubtless prevailed in those of India, where the Sun, Moon, and Mercury, under the name of Budha, for ever occur in the varied page of their mythology. There perhaps, as in the rites of Mithra in Persia, the chief gods attended in the affumed characters of the various constellations. Their physical theology, which led them, in various instances, to consider the Deity as an incarnate agent upon earth, would naturally lead them in those mysterious institutions to shadow out, under the person of the high prefiding Brahmin, the supreme Creator of all things, and to decorate that facred personage (the symbolical representation of Deity) after the manner of the Persian Mithra, with a loofely floating tunic of a bright cerulean tincture, and spangled with innumerable stars. At the same time, their great attachment to astronomy would induce them to confider the priefts, who officiated around him, as representing the planetary train moving

in their feveral stations by his immediate command and influence, and clothed with brightness from the reflection of his own transcendent glory.

SECTION

SECTION VIII.

The wonderful Analogy, or rather the Identity, of the Indian and Greek mysterious Theology baving, in the former Section, been fully sherwn, it is the Author's Purpose in the present to inquire by what Channel the latter derived their Knowledge of the Indian Religion and Literature. - The Investigation commences with an Inquiry into the Æra of the Fabrication of the Caverns of India, and is purfued in a comprebenfive Examination of the Arrangement and symbolical Ornaments of the Caverns of the Thebais, as represented by the best Writers and the latest Travellers .- Strong Features of Similitude every where apparent, as well in the Caverns, and their emblematical Sculptures, as in the mystical Theology, anciently prevailing in either Country, and which originally gave Exislence to those Sculptures. - The Caverns, therefore, both of Egypt and India, fabricated by the ancient Cuthite Colonies from Chaldea,

in the earliest Periods of the World, before buman Habitations and sacred Edifices were erected.— The Refult of the Inquiry stated to be, that the Greeks obtained their Knowledge of the mysterious Rites of Asia, through the Medium of Egypt, at that remote Period in which their Philosophers wishted the Sages of Egypt in the Caverns of the Thebais.

HE nature of the mysterious rites and fciences, anciently celebrated and taught in the caverns of ELEPHANTA and SAL-SETTE, has been extensively explained. The æra of the fabrication of those caverns is a point which cannot be fettled with equal exactness; though it is probable that certain SANSCREET inscriptions, discovered on the walls of the former, and accurately engraved, but not explained, by M. Anquetil, may contain the defired information. An exact copy of them, we are informed, is now in the possession of the Asiatic Society, of which we may expect to fee as correct a version in some future volume, and consequently this obscure point elucidated. The tafte for hieroglyphic ornaments, displayed through those recesses in every part of India, (for those at Elora are ftill

still more numerous and furprising,) has inclined fome writers to think them the workmanship of Egyptian artists, and the idea apparently derives force from a tradition prevalent in these parts, and mentioned by Niebuhr, " that there came hither a certain foreign people, who, in one night, hewed all the figures in the rock, and went away the enfuing morning." Indeed, when we reflect that the ancient Egyptians, under the name of Osi-RIS,* paid adoration to the fun with fervour little inferior to that of the Persians; that in their hieroglyphics, according to the representation of Macrobius, they pourtrayed that divinity under the fymbol of a fceptre and an eye, the eye that furveyed and the sceptre that commanded all things; and that the whole mountainous region of Upper Egypt, bordering upon the Nife, was crowded with subterraneous grottoes and caverns, abounding with aftonishing hieroglyphic sculptures, so similar to those in India, that skilful examiners have thought they discovered among the Thebais a great part of the Brahmin mythology; we are filled with equal altonishment and perplexity.

On

The Lexicon of Jablonski gives a new derivation of the word Osiria, where is there deduced from Own Int, that is, He sabe makes time.

On this disputable point let us first attend to Mr. Norden, a traveller whose pencil was as accurate in delineating as his pen was correct in describing the antiquities of Egypt. If the Hindoos, according to the affertion of Ovington, abfurdly affign to a gigantic progeny, whom they thought alone adequate to the achievement of fuch stupendous works, the fabrication of their caverns; fo, in like manner, the Egyptians, Mr. Norden acquaints us, attribute the prodigious excavations with which the Thebais abounds to a fimilar origin. "There reigns, among the people who at prefent inhabit Egypt, a tradition, that there were anciently in the country GIANTS, who raifed, without much difficulty, the pyramids, the vast palaces, and the temples (external or subterraneous), which we have been just deferibing." Although the idea of their being fabricated by giants hardly deferved a ferious confideration, yet this ingenious traveller has taken an opportunity, from the measure of the entrances into the caves, the dimensions of the gates of the erected temples, and those of the farcophagus remaining to this day in the largest of the pyramids, of demonstrating what might

-1 192.49

See Norden's Travels in Egypt and Nubin, vol. i. p. 111, of the 8ve. edit. by Dr. Templeman. Lond. 1757.

might otherwise with some shadow of reason have been doubted, that the inhabitants of Egypt, in those most remote periods, differed not in size from the present race of men. These circumstances he mentions as incontestable proofs, that the human race have not degenerated in stature: "for the sarcophagus," he observes, "determines the size of the body of the monarch for whom the pyramid was erected: and the passages of that pyramid evince, that the workmen have not been of a larger size than the prince since the entrance and the egress scarcely afford sufficient room for men of moderate stature, such as they have at present."

Our learned countryman, that profound geometrician and astronomer, Mr. Greaves, who had visited those pyramids previously to Mr. Norden, and obliged the public with a description of them and their contents mathematically correct, corroborates his opinion on this point. He describes the internal dimensions of the sarcophagus as somewhat exceeding fix feet in length, and not quite three feet in depth and breadth. "A narrow space," he adds, "yet large enough to contain a most potent and dreadful monarch when dead, for whom, when living, all Egypt was too strait

and narrow a circuit. By these dimensions, and by such other observations as have been made by me, from several embalmed bodies in Egypt, we may conclude that there is no decay in human nature; (though the question is as old as Homer!) but that the men of this age are of the same stature of which they were three thousand years ago, notwithstanding St. Augustin and others are of a different opinion."*

The Brahmins also contend that the stature, as well as the age of man, is gradually decreasing: so that, as I have had occasion elsewhere to remark, from Mr. Holwell, towards the close of the Callee Yug, or present grand period of the world's duration, his stature shall be so reduced, "that he will not be able to pluck a Berengelah, or the egg-plant, without the assistance of a hooked stick." The fact is, that these prodigies of remote antiquity, raised in the mind an admiration and an awe, which mounted into a species of idolatrous veneration for the original sabricators: and, while they beheld such amazing proofs of the

^{*} See Mr. Greaves's Pyramidographia, in the first volume of his works, edited by Dr. Birch, p. 131, 8vo. Lond. 1737.

[†] On the Indian Colmogony, in the first volume of the History itself.

the grandeur of their minds, they thought they could do no less than accommodate them with a form in some degree proportioned to the magnitude of their intellectual powers.

Mr. Norden's seventh plate, equally beautiful as the others, exhibits a view of the grottoes of the great Tschabel Esselsele, or chained mountain; and I could wish to have presented my subscribers with an engraving of that mountain, together with a view of the Canarah Rock, since they both foar alike into the air, with a kind of wild grandeur, sufficient to awe the mind of the savage into veneration, in the same plate; but I have already gone beyond my intended limits in the expensive article of engravings, and they will therefore rest contented with his verbal description of them.

After giving an account of the chained mountain itself, so called from a boom or chain which formerly extended across the Nile, from its basis to a rock on the opposite shore, and barred the passage this way to an invading enemy, he proceeds to describe the adjoining grottoes, "which are numerous, having their sides entirely covered with the most beautiful hieroglyphics." The light, entering only by the outlet of each grotto, was scarcely sufficient to distinguish the various objects,

but at length our traveller perceived an opening at the top, and began to make his iketch." Being shortly after interrupted in this work by the Arabians affembling in multitudes, he was only able to delineate " four figures in high relief fitting, and in their natural fize, two of them male and two of them female." The men who are in the middle have their arms folded across the breast, (an attitude very common in the Indian caverns,) and each woman takes hold of a man under the arm."* Mr. Norden, however, took a less hasty survey of the famous grottoes denominated SABABI-NATH, a name which possibly they may have derived from the species of Sabian superstition anciently practifed in them. They are fituated in the mountains bordering on the shore of the river Nile, called TSCHEBAT ELL KOFFERI; and the traveller must ascend that mountain for two or three hours before he can arrive at the first gate. " Through this gate you enter into a large faloon, supported by hexagonal pillars, contrived in the rock itself. The roofs are adorned with paintings, which even at prefent we diftinguish extremely well; while the gold, with which they were originally decorated, glitters on all fides. Here and there we perceive

^{*} Norden's Egypt, vol. i. p. 49-

perceive openings, which lead to other apartments; but, as they are filled with rubbish, and as the passages into them are embarrassed with it, sew travellers choose to venture themselves there. Above, there is another apartment, to which you may with difficulty arrive, by climbing up on the outside of the mountain. It is not so extensive a saloon as the former; but it is painted after a similar manner, and, like it, communicates with other adjoining apartments."

Mr. Greaves, in describing the pyramid second in magnitude, expresses his astonishment that no traveller before him had particularly noticed " two very stately and elaborate pieces of cavern architecture," by which that pyramid is bounded on the north and west sides. The following description of these rocky apartments, by that traveller, deferves particular notice, not because the style in which they are excavated at all refembles that of Elephanta, but because they bear a very striking fimilitude to the convents of the Talapoins, or priefts of Boods, described by Father Loubere, in his account of the kingdom of Siam, whither, in 1687, he went as ambassador from the king of France. There can be little doubt VOL. II. but

[.] Norden's Egypt, vol. ii. p. 34.

but that the fuperstition of Boods, who, we shall presently see, is no other than the Som-MONACODOM, or stupendous stone deity of the Siamefe, came originally from Egypt - from that country where rocks and ftones, hewn into a thousand fanciful forms, first received the adoration of mankind: from the neighbourhood of those lofty pyramids, the emblem of the SOLAR DEITY, and that coloffal Sphynx, the fymbol of the Sun in Leo and Virgo, which, majestic even in ruins, still strike with awe the altonished spectator. The period of his arrival, however, on the shores of India, is involved in the profoundest obscurity, and the greatest scholars of Asia have exerted upon that point, with various fuccefs, their critical fagacity. I shall presently state in brief what their feveral opinions are, referving, for a particular period of the enfuing history, the full investigation of that perplexing event. For the present I shall only make one observation, as prefatory to the remarks immediately following, that, according to Loubere, their aftronomers have fixed the death of Sommonacodom to the year before Christ 545; and remind the reader, that the date of the invafion of Egypt, by Cambyfes, is fixed by Usher to be in the year 525 preceding. A peculiar

peculiar conjunction of the planets, Loubere informs us, about that period took place; when their first grand astronomical epocha commenced: all which circumstances, if the intelligence can be depended on, tend ftrongly to evince of what material use astronomy is towards rectifying the errors of chronology and fixing the doubtful events of history. About thirty feet in depth, fays Mr, Greaves, and more than one thousand and four hundred feet in length, have these apartments been hewn out of the hard rock in a perpendicular line, and fquared by the chiffel, as he fuppoles, to serve as lodgings for the priests of the stupendous temple adjoining. This opinion of Mr. Greaves, I must observe, remarkably corroborates Mr. Bryant's judicious conjecture, that those amazing fabrics were not folely intended for sepulchres, but for obfervatories and temples, in which were celebrated the gloomy superstitious rites of the progeny of Cush.* Mr. Greaves proceeds to observe, that these caverns range along at a convenient distance, parallel to the two sides above-mentioned of this pyramid, " meeting Y 2 at

^{*} See Mr. Bryant's Analysis of Ancient Mythology, vol. iii. p. 580.

at a right angle, and making a very fair and graceful prospect." The entrance into them is by square openings, hewn out of the rock, not exceeding in magnitude those which he had described before as forming the entrance of the first pyramid, and which he had seprefented as narrow and quadrangular. The chambers within, he observes, are likewise of a square form and well-proportioned, covered and arched above with the natural rock; in most of which there was a passage opening into an interior chamber, but so obstructed with rubbish, and so involved in darkness, as to forbid all penetration into their recesses. These chambers, it can scarcely be doubted, had some secret communication with the interior apartments of this pyramid, the entrance into which has, if ever known, been long fince forgotten. M. De la Loubere, among many interesting and curious particulars relative to the religious fentiments and public rites of the Talapoins, informs us, that this order of Siamese priests relides in convents, which confift of many little cells, ranged within a large square inclosure. In the middle of this inclosure stands the temple. He then adds: " Certain PYRAMIDS stand near and quite round the temple, which are

all inclosed within four walls."* PYRAMIDS and OBELISKS form a distinguishing feature in the Egyptian architeSture. The whole country was covered with the former; and the reader, by casting his eye on the engraving, which represents the august remains of the temple of Luxore, in the Thebais, will observe, that the attachment of the Egyptians to the latter fymbol was not less remarkable. In that plate he will fee two obelisks of aftonishing height and magnitude; and fince, wherefoever the Egyptians extended their influence, this particular mode of fymbolizing the Deity feems very generally to have prevailed, a forcible argument may thence be deduced, that it originated among a people fo notoriously devoted to hieroglyphic worship.

Thebes was at once the confecrated and the classic ground of Upper Egypt. There Science and Genius exhausted all their powers in the fabrication of that august temple to the Deity, of which one of the eight superb portals is exhibited to the reader in a portion of this work: stupendous monument of the piety of that nation, scarcely injured amidst the vicissitudes of the elements and the revo-

lution

See La Loubere's Hift, of Siam, in Harris's Collection of Voyages, vol. ii. p. 482.

lution of near three thousand suns! The subterraneous recesses in this province, as described by the great traveller Poccek, are fo prodigious, that they impress the mind with fearcely less astonishment and admiration than the exterior edifices. They are called, in the language of the country, BAB-EL-MELUKE, that is, the gate or court of the kings; and though, in the later periods of the empire, used as sepulchres for the sovereigns of Thebes, it is highly probable that they were anciently the residence of the living. Indeed our traveller himself expresses a similar belief, when he describes his entrance among them as into " a fort of street, on each fide of which the rocky ground, about ten feet high, has rooms cut into it, some of them being supported with pillars; and, as there is not the least fign in the plain of private buildings, I thought that these, in the very earliest times, might serve as houses, be the first invention after tents, and contrived as a better shelter from wind and the cold of the nights." Both Diodorus Siculus- and Strabo; mention

Pocock's Description of the East, vol. i. p. 97, folio. Lond.
 1743.

⁺ Diod. Sic. lib. i. p. 43.

¹ Strabonis Geograph. lib. xvii. p. 816.

tion these excavations as prodigies of human labour, amounting in number to above forty; of which number, however, the entrance into only seventeen could be discovered by Pocock, and no more than nine could be penetrated. Of these he has presented his readers with plans, of which, as they greatly illustrate every description of this kind, I lamented the want in describing the Indian caverns. His verbal account of them is, however, very clear and intelligible, and I shall therefore insert it

in this place.

" The hills on each fide of the plain are high steep rocks, and the whole place is covered with rough stones, that seem to have rolled down from them. The grottoes are cut into the rock, in a most beautiful manner, in long rooms, or galleries, under the mountains, which are of a close white free-stone, that cuts like chalk, and is as smooth as the finest stucco-work." This description cannot fail of bringing to the mind of the reader the account, in a preceding page, of the stories or galleries cut in the rock of Canarah, fo greatly refembling human habitations, as to have obtained for them the denomination of the city of Canarah. I ought likewife to have before stated the very probable supposition of Mr. Y 4

Mr. Hunter, that, however fince hardened by time and weather, these excavations were probably made when the rock was in a fofter flate, and cut like the chalky free-stone here mentioned by Pocock. He proceeds thus in his interesting narration: " These galleries are for the most part about ten feet in height and width; four or five of them, one within the other, from thirty to fifty feet long and from ten to fifteen feet high, generally lead to a fpacious room, in which is feen the tomb of the king, with his figure cut in relief on the lid. In the furthermost room of another, the picture of the king is painted on the stone, at full-length; both the fides and the cielings of the chambers are sculptured with hieroglyphics of birds and beafts, and some of them painted, remaining as fresh as if they were but just finished, though of such remote antiquity. The sepulchre marked A (in his plate) is most beautifully adorned with hieroglyphics cut into the stone and painted. Over the door the beetle is cut in a circle, and there is a human figure fitting on each fide. The galleries within have hieroglyphics feulptured on each fide, first in a fort of compartment next to the cieling, in manner of a frieze; lower, figures are cut out, representing mummies :

mies; below thefe, for feven feet from the ground, are hieroglyphics all down the fides, divided by lines into different columns. In the middle of the cieling there are figures of men for about three feet in breadth, with STARS on each fide. Among the hieroglyphics I observed many GOATS heads."* On this relation I must request permission to observe, that, as it seems abfurd to place buman beings among the stars, the beings, thus delineated on the cieling, must be of celestial origin, like those groups of GENII and DEWTAHS who are pourtrayed on the walls of the Indian caverns; and, with respect to the goats heads, it will be remembered, that the goat was an animal facred to Pan, who, I have already observed, was particularly worthipped in a city of the Thebais. called, from that deity, PANOPOLIS, the modeen ARMIN.

Having occasion to mention this celebrated city, I cannot resist the opportunity of bringing, from this authentic writer, a very convincing proof of what I have recently remarked, that the temples of Egypt were adorned with astronomical symbols, in the same manner as the subterraneous Indian caverns were. This affertion the following curious

^{*} Pocock's Travels, vol. i. p. 99.

curious passage strikingly corroborates. Wandering over the extensive ruins of PANOPOLIS. the attention of Dr. Pocock was attracted by a stone of stupendous dimensions, one of those that probably once adorned the top of the magnificent temple of that deity, but halfburied in the ground. The part of this maffy fragment, which protruded from the hill of ruins amidst which it was involved, was eighteen feet in length, and on one fide of it was " a very extraordinary sculpture, which had been painted, and from which I concluded that it was a temple dedicated to the Sun. Within fome ornaments there are four circles: in the inner circle there is a figure, probably representing the Sun: the spaces between the two next are divided into twelve parts; in the first, twelve birds are cut in like seals; in the next, twelve figures, defaced; which I conjectured might be the TWELVE SIGNS OF THE ZODIAC. The outer circle, not divided, has in it figures of men, if I mistake not, to the fame number. In each angle, between the outer circle and the fquare ornaments that are round it, is a figure which may possibly represent the four feasons. A wing extends along one fide of it, from a fort of globe, marked out in lines, which probably had another

another wing extending in the same manner, it may be, over fuch another sculpture. The stones, and some others of a temple near, are fo large, that they cannot move them; nor do they use stones in building, but" (who can read the relation, without the most poignant indignation!) " they break in pieces these fine morsels of antiquity, adorned with hieroglyphics, and make lime of them. The entrance of this temple feems to have been to the south, as that of the other was, probably, to the NORTH. Most of it is white stone, mixed with pebbles, and adorned with hieroglyphics: one of them has stars cut on it, which without doubt covered part of the building." But I must return from the temples to the caverns of Thebes. I must revifit those gloomy sepulchres of her departed monarchs, which, probably, in the earliest periods of the world, were the refidence of the ancestors of the human race. Let us once more, with filent ftep and with reverential awe, explore the hallowed depolitaries of royal dust!

Purfuing his lonely journey through those subterraneous apartments, our author found one, in which was the sarcophagus of a king, adorned

^{*} Pocock's Travels, vol. i. p. 78.

adorned with hieroglyphics in different columns, with figures of men, hawks, and bulls. The human figures were probably of the fame nature with the beings above-mentioned; and the hawk, or Isis, is the known fymbol of Isis, as the bull, or Apis, was of Osiris. In another was sculptured a figure with its arms folded across the breast; over it a GLOBE, and a man kneeling on each fide. Dr. Pocock's description of these sepulchral grottoes concludes with an account of one of uncommon magnitude, in which, fays he, " is a statue of a man with a sceptre in his hand, and on the cicling is a large figure of another man painted at top, with a particular fort of fceptre in his hand, and wings hanging down lower than his feet," (from this description, probably HERMES,) " and covering the whole body: this is a very extraordinary figure, and the painting exceedingly fresh. At the entrance, on each fide, are four men, cut into the stone, above the natural size, having heads of hawks and other animals: on the infide, a tortoile and a man with a goat's head are cut within a circle on each of the pilasters. At the entrance of K, a large bull's head is cut in relief, &cc." The tortoile, the TESTUDO of the celestial sphere, is the Hindoo symbol

of strength; upon which account Veeshnu, in the fecond or BARA AVATAR, affumes that form to support the globe finking in the bed of the ocean. The head, and part of the body, of an immense BULL, we have observed, iffues from the centre of the great pagoda of Jaggernaut; and that the rock, through which the Ganges rufhes into Hindostan, is called the Cow-HEAD ROCK. It is readily granted, that to whatfoever purpose they were originally devoted, these particular caverns were indubitably afterwards converted into fepulchres; which circumstance might possibly lead Mr. Ovington into the error of afferting that the Indian caverns likewise were burying-places. Two other caverns, however, of very ample dimensions, which he visited the following day, were certainly not dormitories for the dead, but habitations of the living, or facred recesses for the performance of the most awful rites of religion. To the first of these he descended by a flight of ten steps, cut in the rock, which led to a room in which are square pillars, likewise hewn out of the solid rock. " Beyond that, there is a long room with pillars ranging on each fide: all the apartments are in like manner adorned with hieroglyphics; but the stone is scaled in such a manner, and

is fo black in some of the first apartments, that there is great reason to think the place has been damaged by fire. Beyond thefe rooms, the apartments extend to the right, there being feveral steps descending downwards: one part leads to a gallery, cut found the rock, which has some apartments on one side. In these, as well as in the apartments of the other grotto, marked B, are cavities cut perpendicular down to other chambers below, where I faw doors and openings, and where, probably, there are as many apartments above. One would almost imagine that these places were habitations for the living, and pollibly might be cut under the palaces of the kings of the Thebes, if they were not the palaces themselves." Of the second of these extensive caverns, marked B, in his plate, Dr. Pocock has given no particular description, but, if we may judge from the plate which exhibits the plan upon which it was formed, it was fabricated of dimensions and hewn with toil not less aftonishing.

Before I conclude the account of the Egyptian caverns by this celebrated traveller, the reader may possibly not be displeased if I state here, from the page immediately following that account, the dimensions of a vast colossal

ftatue, which he discovered in some ruins adjoining to the grottoes just described and accurately measured. It will rescue from the
suspicion of hyperbole the account given by
me, from Niebuhr, of the dimensions of the
grand bust in the Elephanta cavern, the centre sace of which, he will recollect, alone
measured, in length, sive seet; that of the
same sace the nose measured one soot and a
half; that the width, from the ear only to
the middle of the nose, was three seet four
inches; and that the stupendous breadth of
the whole sigure, between the shoulders, was
near twenty seet.*

"This large colossal statue," says Dr. Pocock, " is broken about the middle of the
trunk: the head is six feet broad: from the
top of the head to the bottom of the neck
it measures eleven feet, and so it does from
the bottom of the neck to the navel. It is
twenty-one feet broad at the shoulders, the
ear is three feet long and one foot four
inches broad, and the foot is four feet eight
inches broad." In another court of this ruined
temple he saw the remains of " two statues
of black granite: that to the west, which is
in a sitting posture, measured, from the hands

only

[.] See page 149 of this volume.

only to the elbow, five feet; and thence to the shoulder four feet. The statue, on the east, is three feet five inches long in the foot : lying at a diftance from it was the head, with the cap: it is three feet fix inches long; and the ear is one foot in length."* If admiration should be excited in the mind of the reader, on peruling the account of the dimenfions of these statues, to what an exalted point will his aftonithment be elevated, when he casts his eye upon the subsequent page, defcriptive of the celebrated statue of MEMNON, standing upon a pedestal, which is alone above thirty feet in height and in width near twenty feet! I need not acquaint the classical reader that this is the famous statue erected in the temple of SERAPIS, which is affirmed, on the first appulse of the beam of the orient fun, to have emited a distinctly audible found. It is represented, by Dr. Pocock, as composed of a particular fort of porous dark granite, such as he never faw before, and much refembling the eagle-stone. The statue itself is broken; but of the whole amazing mass, the fabrication of which one would think must have exhausted a quarry, some idea may be formed, from the magnitude of the leg and foot, still remaining

[.] Pocock's Description of the East, vol. i. p. 101.

maining entire. Of these an engraving, entirely covered with the infcriptions of Greek and Roman travellers, who bore their attestation to its having fent forth fuch a found on the rifing of the fun, appears opposite to page 104 of his first volume; and he found the height of the leg, " from the bottom of the foot to the top of the knee, to be about nineteen feet : from the bottom of the foot to the ankle, two feet fix inches; to the top of the instep, four feet; the foot itself being five feet broad, and the leg four feet in depth."* Stupendous as these mensurations must appear, . even these appear comparatively small, when we consider what is related in Pliny, concerning the wonderful SPRYNX; for, that writer affirms, that the head was no less than one hundred and two feet in circumference; that the figure itself was fixty-two feet high from the belly to the crown of the head; and that its entire length was 143 feet. It ought to be remarked here, that Pocock, in his description of the Sphynx, has inaccurately cited Pliny, as stating the length of the figure to be only 113 feet; "whereas," fays he, "my account makes it 130 feet, which are seventeen feet VOL. II. more

[·] Pocock, vol. i. p. 102.

more than Pliny."* But the real number of feet mentioned in Pliny is 143, as stated above; and therefore his dimensions, which are probably more exact, are thirteen feet less than the number of feet assigned by the Roman naturalist. Of its ancient altitude of sixty-three feet, only twenty-seven now remain above the surface; so that about thirty-six feet must be buried in the accumulated sand and gravel.

The reader has been just informed, that these statues are of hard black granite, as are almost all the ancient statues of Egypt. This circumstance suggested to M. Volney, one of the most enlightened travellers that ever explored the East, the idea that the ancient Egyptians, to whose genius, talents, and learning, posterity is so deeply indebted, were BLACKS likewise, fince he thinks it was natural for them to choose that their statues should be composed of marble of the same colour with themselves. The idea first occurred to him, on a minute investigation of the fphynx; for, when he beheld her black complexion, and her features precifely those of a negro;

Plinii Nat. Hift. lib. xxxvi. c. 12, and p. 390, of my edition, by Aldus: and Pocock, vol. i. p. 46.

negro; and when he recollected, that Herodotus had long ago afferted his belief, " that the Colchi were a colony of Egyptians, becaufe, like them, they had black fkins and frizzled hair;" M. Volney immediately coneluded, that the ancient Egyptians were real negroes, of the same species with all the natives of Africa. He has added to this fuggestion many very ingenious and interesting reflections. He lays it down as a general rule, that the features of a nation are a kind of monument capable, in many cases, of elucidating and afcertaining the testimony of history concerning the origin of nations. " How is our aftonishment excited, when we behold the prefent barbarifm and ignorance of the Copts, descended from the ancient Egyptians, men of fuch profound genius and fuch exalted science; and when we reflect, that to the race of negroes, at present our slaves, the objects of fuch extreme contempt to Europeans as to render it a problem among them whether the understanding of negroes be capable of the same culture with that of WHITE MEN, yet that to this race we owe our arts, our sciences, and even the very use of fpeech."* I shall

7, 2

[.] See M. Volney's Travels in Egypt, vol. i. p. 83.

I shall hereafter endeavour to profit by these judicious remarks of M. Volney; and, when my history shall have at length commenced, I shall apply this rule of discrimination to some of the most venerated statues of India. It is not a little remarkable, that, according to Herodotus, there were two Ethiopias; one in Africa, the other in Asia; and, if the Delta of Egypt was peopled by the Thebaic Ethiopians, it is, at least, possible, that the peninfula of Egypt might have for its first inhabitants the Ethiopians of Afia. In addition to M. Volney's remarks on this subject, I must also be permitted to observe, that the ancients really did, in fabricating their statues of men and objects, attend to the complexion, properties, or country to which they belonged. Mr. Addison, in his travels, elegantly remarks, that he never faw any statue of steep that was not of black marble; alluding, doubtless, to the night, which is appropriated to fleep. All the statues of the NILE, and in particular that fine one at present to be seen in the garden of the Vatican at Rome, are of black marble, emblematical of the colour of the Ethiopians, amidst whose lofty mountains that river has its fource.

" Usque coloratis amnis devexus ab INDIS."

VIRG. Georg. 4.

This quotation from Virgil, concerning the Nile, is highly deferving of notice, because it affords additional evidence of what was afferted in the early pages of the Geographical Differtation, that the name of INDIA was extended by the ancients to Ethiopia; and that, in fact, from their ignorance of the geography of the higher Asia, India and Ethiopia were sometimes confidered as the same country. The reader will recollect, that one of the idols, in the pagoda of Jaggernaut, is described by Captain Hamilton as A HUGE BLACK STONE, OF A PYRAMIDAL FORM; and the SOMMONACO-DOM, being the representative of the Egyptian god and prophet Boods among the Siamefe, is of the fame fable complexion. In the defcription from the Ayeen Akbery, inferted in a preceding page, of an immense temple crested to the fun by an ancient rajah, the reader has been made acquainted, that in the front of the gate there stood a pillar of black stone, of an octagonal form, fifty cubits high: he will hereafter be informed, from Tavernier, that, in the pagoda of Benares, that traveller likewise obferved a conspicuous idol of black stone; and that the statue of Creeshna, in his celebrated temple of MATHURA, is of black marble. It is very remarkable, that one of the principal Z 3 ceremonies

ceremonies incumbent upon the priests of these stone deities, according to Tavernier, is to anoint them daily with odorizerous oils, a circumstance which immediately brings to our remembrance the fimilar practice of Jacob, who, after the famous vision of the celestial ladder, recorded in Scripture, took the flone which be had put for his pillows, and fet it up for a PILLAR, and poured oil upon the top of it. It is added, that be called the name of that place BETH-EL; that is, the house of God, as the patriarch himself explains the word; for this stone, which I have set for a pillar, shall be called God's House. Gen. xxviii. 18, This paffage evinces, of how great antiquity is the custom of confidering stones in a facred light, as well as the anointing them with confecrated oil. From this conduct of Jacob and this Hebrew appellative, the learned Bochart, with great ingenuity and reason, infists that the name and veneration of the facred stones, called B.E. TYLI, fo celebrated in all pagan antiquity, were derived.* These Bætyli were stones of a round form; they were supposed to be animated, by means of magical incantations, with a portion of the Deity; they were confulted, on occasions of great and pressing emergency, as a kind

^{*} Vide Bocharti Sacra Geograph. lib.i. p. 38.

a kind of divine oracles, and were fuspended, either round the neck, or on fome other part of the body, of the enraptured devotee. Of these consecrated stones, some were dedicated to Jupiter and others to the Sun; but they were confidered as in a more particular manner facted to SATURN, who is fabled to have fwallowed one of these stones in the place of Jupiter, when he was feized with the fanguinary furor of devouring his children. The fable proceeds to affirm, that the god having found his mistake, and vomited it up again, this stone was preserved near the temple of Delphi, where care was taken to ancint it daily with oil, and to cover it with wool, that had grown on the days of the SATURNALIAN festival.* The above relation affords a very remarkable proof (and it is very far from being the only one of the kind which these volumes will exhibit) how closely the pagan world imitated, and how basely they perverted, the religious rites of the ancient and venerable patriarchs. Thus, the fetting up of a stone, by this holy person, in grateful memory of the celestial Z4

See Stephanus on the word Thaumasius, and also Pausanias, who more amply relates the story. The meaning of this curious stable seems to be, that Saturn, or Time, (as the word Chronos, elegantly called by Horace Timpus edax rerum, signifies.) devours whatever he produces. His offspring are the revolving years.

celestial vision vouchfased him from above, and as a monument of the divine goodness, which had so conspicuously guarded him in his journey, probably became the occasion of all the idolatry paid, in succeeding ages, to those shapeless masses of unhewn stone, of which so many assonishing remains are scattered up and down the Asiatic, and, I may

add, the European, world.

These idol-representations of Deity, it has been observed, were at first rugged and shapeless as the rock from which they were torn: and I am of opinion this argument may be fairly urged in favour of the high antiquity of many of those rude and formless blocks, both of wood and stone, that are at present honoured with adoration in the most venerated pagodas of Hindostan. As mankind themfelves grew more polished, and as statuary improved, their deities were represented under forms less hideous and disgusting; and those forms were accommodated to the new notions of Deity which their earliest speculations in physics, and their increasing knowledge of astronomy, inspired. The masly unhewn stones foon shot up into graceful pyramids and lofty obelisks, after the model of the solar ray and the ascending flame. The pyramidal form, however,

however, did not universally prevail. Some of those mighty masses were hewn into square columns, obtuse at the fummit, whose four polished fides symbolized the four elements, or were carved to face the four cardinal points. The earth, fays Eusebius, was represented by a cylindrical stone. The octagon black column, mentioned in the preceding page, might posibly have been fabricated in allusion to fome fimilar notion deriving its birth from physics and astronomy. Even the form of the cross, as allusive to the four elements. was no unufual fymbol in the pagan world: and indeed Tavernier, as we shall hereafter fee, describes two of the principal pagodas of India, Benares and Mathura, as erected in the form of VAST CROSSES, of which each wing is equal in extent.

Let not the piety of the catholic Christian be offended at the preceding affertion, that the cross was one of the most usual symbols among the hieroglyphics of Egypt and India. Equally honoured in the Gentile and the Christian world, this emblem of universal nature, of that world to whose four quarters its diverging radii pointed, decorated the hands of most of the sculptured images in the former country; and, in the latter, stamped its form upon the most

most majestic of the shrines of their deities. It repeatedly occurs on the Pamphylian and other obelisks; and the antiquaries Kircher and Mountfaucon have both honoured it with particular notice. The CRUX ANSATA of Hermes . is represented by the former as a most sublime hieroglyphic, as a most mysterious and powerful amulet, endowed with an aftonishing virtue, and as exhibiting one of the most complete mathematical figures; " babentem longitudinem atque latitudinem, et quatuor angulos rector;" possessing at once both length and breadth, and having four right angles, at once allufive to the four cardinal points of the world and typical of the four elements. In pages 277, 279, 280, and 281, of the third volume of his Œdipus, are symbolical representations, copied from the Barberine obelifk, of the four elements; FIRE, defignated by a figure of Ofiris, as the ANIMA MUNDI, or foul of the world, with a hawk's head; the AIR, by a figure bearing on his head a cap adorned with an orb, and wings, the usual emblem of the AIR on Egyptian monuments; the EARTH, by that of Isis, the great mother of all things, with a calathus on her head, containing ears of grain, a bunch of flowers, and the horns of a cow, all emblems, as well as the fwelling bosom

bosom which the goddess displays, of sertility and plenty; and, lastly, water, typissed by a statue bearing the head and face of the Ibis, a bird sacred to the Nile, and with the horns lunce sextilis, of the Moon, which in the month of August was supposed to assist in causing the inundations of that river. All these sigures, thus emblematical of the elements, which are highly worthy a minute examination, bear the hallowed cross with its circular handle, by which they were collectively and strikingly represented. To the consideration of the same subject, Mountsaucon has also devoted a few interesting pages, which will hereafter claim our attention.

If M. Volney's argument, that the colour of the statue frequently denotes the descent and nation of the person sculptured, be allowed, I trust my own humble assertion, that the qualities and property of the object are often pointed out by the same means, will not be refused its weight, because it is sounded on very ancient and respectable authority. I shall briefly state that authority. Porphyry, cited by Eusebius, expressly says, that the ancients represented the Deity by a black stone, because his nature is obscure and inscrutable by man.*

The

^{*} Euseb. de Prap. Evang. lib.iii. 1. 3. p. 31, edit. Basil. 1542.

The ancient Arabians, who lived in a region of rock, according both to Suidas* and Strabo,+ continued to a very late period to worship the image of their tutelary god Mars, erected at Petra under the figure of a square black stone; for black, say these authors, was thought a proper colour to veil the folemn mysteries of religion. The same rule seems to have been observed in statues fabricated of wood, in the formation of which the diffinguishing attribute or function of the deity was generally attended to. Paulanias has enumerated the feveral kinds of wood made use of for this purpose. As the ebony, cypress, cedar, oak, yew, and box trees. Thus, to the formation of those of Jupiter, the fovereign of gods and men, the oak, the monarch of the woods, was devoted. Hence the myrtle, facred to Venus, composed the beautiful statue of the queen of love. The olive, a tree confecrated to science, of which whole groves adorned Athens, the feat of learning and philosophy, gladly submitted to the age to form the statue of Minerva, the patron of the arts. Of the infernal deities, the funereal cypress and the baleful yew ufually

[.] Suidas in voce Deus Mars.

[†] Strabonis Geograph. lib. avii.

usually formed the gloomy and inauspicious images.

It is now high time to conclude this excursion to the caverns of the Thebais, and to state the result of the inquiry. It remains for me to shew, that the excursion itself was not entirely unnecessary; but, by producing fome more particular proofs, as well as by a few striking and indisputable traits, to demonstrate that the mythology of the Hindoos and Egyptians had the fame origin, and in reality, even at present, are not greatly disfimilar. Many proofs of a general nature have been already adduced, and more still will be pointed out in the fecond chapter of this Differtation; when, after having described the pagodas, I shall proceed more minutely to confider the theological rites now practifed in them, and certain customs and maxims originating in the folemnities of religion, common to both nations. For the present I shall only remark, that there feems to have prevailed, in Egypt, a more ancient mythology than we have as yet received any fatisfactory account of; for, though the statues of the Nile and those in the Delta might be BLACK, possibly because fabricated by an Ethiopian race, yet we know from Eufebius, whom I must quote

at length in my account of the Indian cofmogony, that the great CNEPH, that most ancient divinity of Egypt, was a being of a DARK BLUE complexion, the colour of the heavenly region from which he descended. I must also remark, that though the Sommonacodom be a black stone, as representing Boodh, who came to India from a nation of blacks, and though Creeshna was so called from his black complexion, yet we have certain information from Sir William Jones, who I must likewise hereafter cite more at length on this curious subject, that the great statue of NARAYEN, or the Spirit of God, who at the beginning of time floated on the waters, as that statue is now to be seen elevated in the great refervoir of CATMANDU, the capital of Nepaul, is formed of BLUE MARBLE.+ Cneph, therefore, and Narayen are evidently the fame deity, under two different appellations.

Eusebius, in his treatise, recently cited, De Preparatione Evangelica, which is a wonderful mine of Oriental theological science, and contains many fragments of the more ancient philosophers

^{*} Vide Eusebius de Prap. Evang. lib. iii. cap. 11.

t See Sir W. Jones in the Afiatic Refearches, vol. i. p. 261.

philosophers of Afia, now loft, afferts, from Horus-Apollo, that the old Egyptians fymbolized the world by a BLUE serpent with YEL-Low scales; that is, as Horus-Apollo himfelf explains it, the firmament spangled with stars. In a preceding quotation, from M. Sonnerat, on the Indian mythology, the reader must have observed ideas very consonant to this in the manner in which their painters defignated the planet SANI, or Saturn, viz. as a divinity of a BLUE colour, invested with ferpents in a circle; and, in fact, to Eulebius's account it may be added, that, in our editions of Horapollo, he himself describes this mundane ferpent, the Agathodaimon of Egypt, as in a circular position; for, it is the ferpent wreathed into a circle, by holding his tail in his mouth.* By this they probably meant to shadow out the rotundity of the world; or, fince the ferpent, thus sculptured, was, among the Egyptians, the common emblem of eternity, they might possibly intend to intimate the old atheistical doctrine of its eternal duration.

It

^{*} Serpentem pingunt, says Horapollo, qui suam ipsus caudam rodat; variis insterstinctam squamis. Per squamas, quidem, trellas, quibus celum, seu mundus distinctus est, obscure indicantes. Vide Hori-Apollonis Hieroglyphica, p. 8, edit. duodecimo, 1631.

It has already been observed, in the Geographical Differtation,* that Sir W. Jones is inclined to derive the name of the river of Egypt from the Sanfereet word NILA, or blue; and he cites Dionysius, who expressly calls the Nile an azire fream, in corroboration of his opinion. Now it is exceedingly fingular, that the Indus, in the early part of its course, should be called the NILAB, from the blue cast of its waters. Indeed one large branch of the Indus still bears that name: and, possibly, it was the similitude of their names, which led Alexander into that enormous error. recorded in Arrian, of imagining, upon his arrival at the banks of the Indus, that he had discovered the sources of the Nile. But let us proceed to state some farther particulars, in which this fimilitude is still more directly and distinctly visible.

If Brahma, in the act of creation, be painted in the pagodas floating over the surface of the vast watery abyss, while he reclines upon the expanded leaf of the lotos; exactly in the same attitude, and recumbent upon the same facred plant, does the figure of Osiris constantly occur on all the monuments of Egyptian

^{*} See the foregoing Differention in page 302, and Major Rennel's remark upon the colour of the Nilab, there cited.

Egyptian antiquity. Instances of the latter deity, thus defignated, may be feen by the inquisitive reader in Kircher, Kæmpfer, Mountfaucon, and in the curious and elaborate work of M. D'Ancarville, who has attempted, from a feries of commemorative coins and medals, to give us a history of the earliest progress of the arts and the diffufion of superstitious rites throughout the ancient world. In the first volume also of this history, I shall be happy, from my own rather extensive collection made for the elucidation of it, to present the reader with engravings of fome of the more remarkable representations on ancient coins and fculptures; particularly of Osiris UPON THE LOTOS, THE SERPENT-WORSHIP, and THE MUNDANE EGG; all of which notions were as familiar to the ancient Hindoo fages as ever they were to the Egyptian, Perlian, and Greek, philosophers; and, as appears to me, at a period far more remote than, from any remaining annals of these latter nations, it can be proved they flourished among them. These plates, however expensive they may be to the author, will prove of infinite use towards illustrating the comparative description. which it is my intention to exhibit, of the VOL. II. Oriental Aa

Oriental cosmogonies, and will, in particular. throw great light on the ancient history and

mythology of Hindostan.

The last of those celebrated antiquaries mentioned above, M. D'Ancarville, decidedly corroborates what I have before remarked on the ancient worship of stones, gradually improving in form and grace, from the rude block adored in Scythia, as the representation of Deity, to the polished and elegant statues of Greece; -Greece which, he observes, added nothing but beauty to the idea of the Deity, entertained by those who conceived his majesty and attributes to be most properly represented by gigantic sculptures and massy symbols. The commencing of his laborious investigations by medals, rather than by defigns, was a step equally novel and judicious, fince the engraved tablet of brass and copper, as I have in my preface observed, with respect to those dug up in India, bids fair to remain, when the fculptured stone shall have crumbled into dust, and the time of the most glowing picture shall have been totally obliterated. Ancient coins. he fays, not only preferve impressed the figures under which the gods were worshipped, but in their very formation are emblematical of those figures. According to Plutarch, he remarks,

marks, that the most ancient Greek coins are of an obelifical form, and intended to imitate the folar ray: they represent javelins, or to use his own words, les belemnites, commonly called the thunder-stone, of which javelins were anciently made. Of coins, bearing this obeliscal form, there is great variety exhibited in his first volume: but it was not so much my intention to mark this, though a circumstance extremely curious, as the fucceeding observation. M. D'Ancarville afferts, that the belemnite coins, which represent the thunder, that is, the power of the Almighty, and, confequently, the Deity by bis symbol, are often found furrounded by the tamara-leaf, to fignify that thunder is engendered in the region of clouds created by the water, near which the tamara constantly grows. For the proof of this affertion, he refers us to the valuable collection of an ingenious gentleman of our own country; fince, in the museum of Mr. Charles Townley, he observes, that the SACRED FIRE, on an ancient candelabre of white marble, is represented as furrounded by a tamara-leaf.* Now the plant of the tamara is the same with the NELUMBO of Lin-

A a z næus.

See M. D'Ancarville's Récherches sur l'Origine et les Progrès des Arts de la Grece, tom. i. p.6, edit. 4to, à Londres, 1785.

næus. It is an aquatic plant, of the genus of the nymphæa, and, if I may judge from a print of it in Kæmpfer,* not distimilar from the Loros, on which Brahma and Ofiris float upon the chaos. The candelabre of Mr. Townley, therefore, appears at once to resolve the whole mystery; for, since we have repeatedly observed, from Plutarch, that Ofiris is the fun; and fince Sir William Iones informs us, that the names of Brahma, Veeshnu, and Seeva, coalesce, and form the mystical word OM; a word which in the ancient Sanscreet character signifies neither more nor less than the SOLAR FIRE: the consequence is, that the ancient Egyptians and Indians adored the fame deity, under two different appellations; that deity which I have proved was fo univerfally worshipped in Persia, and throughout Asia, THE SUN.

As Ofiris and Brahma thus nearly resemble each other, at least in the paintings and sculptures of the East, so if we examine the character and attributes of Seeva, the destroying

^{*} See Kæmpfer's Hift. of Japan, vol. ii. and plate 37. The reader, who possesses and will turn to Kæmpfer's curious book, will there see the great god of Japan, with innumerable arms, all adorned with various symbols, seated upon the TAMARA.

ing power of this country, his functions exhibit too close a parallel to those of the TyPHON, or evil genius of Egypt, to permit us
to hesitate one moment in pronouncing that
they originally sprang from one central and
common source.

During the whole of our progressive furvey of the caverns of Upper Egypt, and the mythological sculptures illustrative of the ancient worship of that country, increasing evidence feems to have arisen, that they were originally invented by the fame ingenious race, and fabricated by the same skilful hands. Travellers, who have vifited Egypt in periods far more recent than those in which the abovecited authors journeyed thither, confirm the truth of their relation, in regard both to the number and extent of the excavations, the beauty of the sculptures, and their fimilitude to those carved in the caverns of India. The final refult, therefore, of this extended investigation is, that, in the remotest periods, there has existed a most intimate connection between the two nations, and that colonies. emigrating from Egypt to India, or from India to Egypt, transported their deities into the country in which they respectively took up their abode. But, as the Brahmin, if he quit Aaz

his native shore, violates the precepts of his religion, of the two hypotheses, that is the more probable which affigns the fabrication of them to the enterprizing, the daring, Cuthites, the ancestors of the race of Mizraim. When we farther confider, that some of these travellers, more intimately exploring the Egyptian caverns, and more minutely examining the sculptures with which they are adorned, have politively afferted, that they discovered among them the figures of the gods* JAGA-NAUT, GANEES, and VEESHNU, we can hardly refuse our affent to an opinion supported by fuch strong evidence. "Opposite Miniah," fays M. Savary in his thirtieth letter on Egypt, " is the village of Gerabia; and, farther up, that of Saonadi. Here the grottoes of the Thebais begin, famous for the austerity of the anchorets, who retired hither during the primitive ages of Christianity. They extend for twenty leagues, as far as facing Manfelout, and were excavated by the ancient Egyptians. The hieroglyphics, found in them, attest their antiquity." To those who are decidedly of opinion, that the Indians are defcended

^{*} These, in particular, are the sentiments of M. Chevalier, many years governor of Chandennagone. See Savary's Letters, vol. ii. p.6.

descended from HAM, by RAMA, the son of Cush, the pointed similitude in these and innumerable other instances, between them and the Egyptians, will appear by no means surprising; but how far that opinion may be probable is a subject which in the ensuing history will be considered at some extent.

Other writers, indulging a still wider scope of conjecture, have traced to Ethiopia, that country of eternal rock, the original fabricators of this kind of cavern-temple. Their opinion is founded upon the description which Ludolphus* gives of the early and flourishing ftate of architecture in that country, evident in the vast ruins of the ancient capital of Axuma, and of many magnificent temples cut out of the live rock. Indeed, in confirmation of the opinion, that religious ceremonies in Ethiopia, at no very remote period, were performed in caverns, I may observe, that, in an edition of that author now lying before me, there is a very curious engraving on the lid of a coffin, "dug up, fays Ludolph, in a Christian church-yard, near the high-way called Priscillas," which represents the participation of the holy communion, by some early Christian converts, in the dark recess of a facred Aa4

[·] Ludolphus's Hift. Ethiop. p. 170, edit. 1682.

facred grotto. A remark of Mr. Hunter may also with more propriety be noted here than it could have been before; that many circumstances would induce us to suppose the Indian caverns to have been constructed by a very different race of men from those who at this day inhabit the country. The reasons, which that gentleman affigns for holding this opinion, are founded upon the natural indolence that distinguishes the present inhabitants, apparently incapacitating them for works of fuch enormous labour; and upon their general ignorance of that graceful elegance of form and proportion of feature which constitute the principal beauty of sculpture, and which, in fo remarkable a manner, diftinguish the majority of the figures just described. " But, farther, it is natural to suppose that those artists would take the model of their work from among themselves; these figures, however, are very far from refembling the present race of Indians. The general form of the body is more robust and muscular; but the most remarkable difference lies in the countenance, which is broad and full; the nose flat; the lips, particularly the under-lip, remarkably thick; and the whole combination of features of a drowly appearance, very unlike

like that acute and sprightly look which distinguishes the natives of Hindostan."*

Since both the Egyptians and Ethiopians were the undoubted descendants of Ham, as possibly might be the Hindoos; and, confequently, fince all must be supposed to have been infected with the original idolatry of Chaldea, that primeval country, where their ancestors so long resided; I shall again present the reader with an extract from the same prophet whom I cited in a former page, in elucidation of the superstitious rites practised in the mystic cell of Egypt, and of the sculptures pourtrayed on the walls, both of those cells and the caves of India. Whoever attentively confiders what, from various authors, and some of such unimpeachable veracity as Niebuhr, Hunter, and Perron, has been before related, concerning the fplendid regal ornaments that decorate the bead and neck; the zones, jewelled or serpentine, that gird round the waift of the Indian statues; whoever, in India, has feen the profusion of vermilion or faifron, with which, according to his cast, the devout Hindoo, at the performance of his facred juggen, marks both his own forehead and that of the deity he adores, must agree with

with me, that no allufion to those ornaments can be apparently more direct, and no description of the images themselves more accurate, than the following in Ezekiel. Under the character of ABOLIBAH, an abandoned proftitute, does JEHOVAH thus parabelically stigmatize the idolatrous devotion of the apostate Judah. - She doated upon the Assyrians, ber neighbours; captains and rulers, clothed most gorgeoufly. - And, when she saw men pourtrayed upon the walls, the images of the Chaldeans pourtrayed with vermilion, girded with girdles upon their loins, exceeding in dyed attire upon their beads, all of them princes to look to, after the manner of the Babylonians of Chaldea, the land of their nativity; then, as foon as she saw them with her eyes, she doated upon them, and sent messengers unto them unto Chaldea. And, again, towards the close of the same chapter, it is faid - " Moreover this they have done unto me : WHEN THEY HAD SLAIN THEIR CHILDREN TO THEIR IDOLS; then they came, the same day, unto my fanctuary to profune it. - And, furthermore, ye have fent for men to come from far, unto whom a messenger was sent; and, lo! they came, for whom THOU DIDST WASH THYSELF, (that is, perform ablutions,) PAINTEDST THINE EYES, AND DECKEDST THYSELF WITH ORNAMENTS.

ORNAMENTS. And fattest upon a stately bed, with a Table (that is, an altar) PREPARED BEFORE IT, WHEREUPON THOU HAST SET MINE INCENSE AND MINE OIL. And a voice of a multitude, being at ease, was with ber, and with the men of the common fort were brought Sabians* (that is, worshippers of the planets) from the wilderness, which put bracelets upon their hands, and beautiful crowns upon their heads."+

We have now travelled through the caverns of the Thebais, those most ancient and sacred retreats, successively the mansions of the illustrious living and the repositories of the mighty dead; we have explored their inmost recesses, and examined their ornamental sculptures. We have, in the course of our progress, purposely omitted to take any very particular notice of those numerous and superb structures in their neighbourhood, whose height and majesty, even in ruins, awe the associated spectator, because it is our intention to devote a future chapter of this work entirely to the consideration of that stupendous species

^{*} The term Sabias is derived from Saba, a holl; that is, the most of heaven.

⁺ Ezekiel, chap, xxiii. ver. 14, 15.

species of massy architecture and hieroglyphic decoration, which alike distinguish ancient Egypt and ancient India. The Greeks, who possessed no quarries in such abundance, and had a more correct taste, in this walk of science alone rejected the model of their masters.

This furvey finished, the only remaining fubject of investigation is, by what channel the Greeks arrived at so intimate a knowledge of the mythology of India, as their paintings, their emblematical sculptures, and their facred fables, for the most part borrowed from that country, prove them to have acquired? Was it by means of the commercial intercourse which was opened with the latter country by the conquests of Alexander, and carried on under the government of the Ptolemies, his fucceffors, in Egypt? That period is furely too late in the annals of time, fince the vast and complicated system of the Greek mythology was formed, and vigorously flourished, previously to the invasion of Alexander. We must search for the origin of the connexion, as well as the fource of this analogy, in æras far more remote, even at that distant period when the philosophers and theologists of Greece successively resorted

Straff and March 1971

to the colleges of Upper Egypt, and imbibed the principles of wisdom and science at its supposed fountain-head, amidst the gloom and solitude of those sacred caverns which Pocock and Norden have so accurately described.

That, even at this distant period, their acquaintance with the literature and mythology of the Higher Afia did by no means commence, though the refult of their knowledge might be then first formed into a regular fystem, will hereafter be made clear to the reader in a future chapter upon the pure original theology of Afia, and the Oriental Triads of Deity; fince the Phænician Taut and the Thracian Orpheus, whose respective fystems will be extensively considered, and both of whom flourished before the Trojan war, doubtless laid the foundation-stone of the fabric of Grecian science and theology. Thales, however, being univerfally confidered as the father of the Grecian philosophy, it will be fufficient, in this place, to trace the vestigia of that venerable fage in his expedition to Egypt, Our historical review of the doctrines and travels of Pythagoras and Plato, in which the preceding affertions will be more amply verified, must be reserved for a future portion of this work.

This first and wifest of the renowned Eogos of Greece was born at Miletus, and flourished at the beginning of the fixth century before Christ, and consequently near three hundred years previous to the irruption of the Macedonians into India. From the circumstance of his having invented the constellation of the Little Bear, some ancient authors, and among them Hyginus and Suidas,* supposed Thales to have been a Phænician, but the fact itself of his having first formed into a constellation the stars of the Ursa Minor is exceedingly doubtful, fince the Phænician navigators, in their daring expeditions to the most distant regions of the globe, during ages far anterior to that of Thales, could scarcely have performed those remote voyages without the help of the guiding ray, shed by the pole-star, from the very centre of the Arctic circle. Its name of Cynofura is undoubtedly Grecian, being compounded of wwos and sea, the tail of a dog : but its more ancient name was Phoenice, which immediately points to its inventors, the old Phænicians. All that can be allowed is, that he brought this afterism from Phænicia, whither

^{. *} See Suidas in voce Thales, and Hyginus in Aftronom. lib. ii. p. 125.

whither it is acknowledged he travelled, into Greece. The expedition of Thales into Phænicia, according to Laertius,* his geographer, took place at an early period of his life: it was in a more advanced feafon of it that he vifited the fages of the great Diofpolis, or Thebes. At that period the three grand colleges of Egyptian learning, that of Heliopolis, that of Memphis, and that of Thebes, flourished in the zenith of their glory under the patronage of Amalis, a prince: renowned for equity and wildom. As yet the frantic Cambyfes had not poured defolation over the fertile valley of Egypt, slaughtered her priests, or burned her temples. This calamitous event, so fatal to the power and the sciences of Egypt, took place under the fucceeding reign of Psammenitus, his son and fucceffor, who was himfelf the victim of the fury of that fanguinary conqueror. Those colleges Thales successively visited; as did Pythagoras afterwards, but under lefs aufpicious circumstances, the latter being taken prisoner by Cambyses and sent captive to Babylon. It was happy for fcience, and appears like the hand of that all-wife Providence which directs, unfeen, the affairs of mortals.

which

[.] Diogenes Laertius in Vita Thalis, p. 58.

which exalts and puts down empires, and permits the ray of science to beam alternately on every country of the earth, that these wise and pious men should have gone to Egypt, in quest of knowledge, at the very juncture when its divine light was about to be extinguished for ever in that devoted country, and should have snatched a torch from the alters of the muses in Egypt, to kindle a brighter and purer slame on their rising alters in Greece.

Thales was received into high favour and much admired by king Amafis. Having been instructed by the priests of Memphis in the principles of geometry, a science in which they excelled, he, at that prince's defire, measured the altitude of the pyramids by their shadow.* When he returned to Greece he very much improved that science, instructed Pythagoras in it, and is supposed to have invented many of the propositions in Euclid. Under the Heliopolitan priests, who, as may be supposed of priests officiating in the city of the fun, were more addicted to aftronomy, he perfected those astronomical studies which he had commenced in Phænicia, and afterwards taught that science to his country-

men,

[·] Plutarch in Symposiae. p. 36.

men, as yet inexperienced in its wonderful arcana. Thales, if the accounts that have come down to us may be credited, which the learned Mr. Costard is very much inclined to doubt,* not only first found out the true length of the folar year, but predicted an eclipse of the sun, which precisely came to pass at the time predicted, and put an end to the five years war carried on between the Lydians and Medes, who, thinking the gods displeased by the sudden turning of day into night, terminated their differences by a lasting peace.+ The determination of the length of the year, and the prediction of this famous eclipse, could not, however, have been effected without a mathematical apparatus and aftronomical tables, which cannot be fupposed to have existed, in Greece, in that infant stage of the science. Thales, therefore, undoubtedly borrowed his information, in both these respects, from the Egyptian priests, who we know, from the most authentic writers of antiquity, could calculate ecliples, and who had long before engraved the number of the days of the reformed year upon the great golden circle that adorned the tomb Bb VOL. II.

[.] See his Letters on the Rife of Altronomy, p. 95.

⁺ Herodoti, lib.i. p. 46.

of Ofymandes. But the superb sepulchre of Ofymandes was at Thebes, and, therefore, we must now finally follow the steps of our philosopher, during his anxious wanderings in quest of truth and science, to those caverns of the Upper Egypt which we have so lately explored.

Philosophers, it has been already observed, ever loved the filence of groves and the folitude of caves. While Monarchy fwayed the fceptre in Thebes, and Luxury indulged her bloated progeny in that celebrated metropolis with all the rarities of the East, Science had taken up her abode in the rocky recesses adjoining, and roots and water alone composed the frugal banquet of the fages who tenanted the caverns that lined the borders of the Nile. Pythagoras himself on his return to Samos, after a residence of two-and-twenty years in Egypt, though he erected a school for the public study of philosophy within the city, yet refided without the city in a cavern, where he delivered his more mystical and profound discourses; and in like manner the more deep and recondite sciences of Egypt were alone taught, by her fequestered sacerdotal tribe, in the gloomy adyta and subterraneous grottoes of the Thebais.

In attempting thus to trace the footsteps of the first and wifest of the Greeks, during ages involved in deep historical obscurity, and to prove that Thales really did derive from the fages of Egypt the great outlines both of his theology and philosophy, we ought by no means to omit mentioning a few strong collateral circumstances which immediately tend to establish our hypothesis. The Egyptians were at that time devoted to hieroglyphics and to a mythological cast of sentiment. The history both of their Dii Majores and Minores was composed of a series of physical fables and ingenious allegories, allufive to the celeftial phænomena; and can it, therefore, excite wonder that Greece, whose earliest philosophers were pupils of the Egyptian fages, should pursue the same course of fabling and allegorizing, furpassing their masters as well in the boldness as in the elegance of their romantic fictions? The genii which prefided in the figns of the Egyptian zodiac are, for the most part, the deities of Greece. In the Grecian Apollo, who does not trace the Ofiris of Egypt? and, in their winged Mercury, the Hermes of that country, in which wings were fo usual a symbol, that Scripture itself denominates B h 2

denominates it the land shadowing with wings?" But, in fact, the Egyptian Ofiris is the Efwara of India, and Hermes is no other than the celebrated Indian deity Bhood, the offfpring of Soma, the moon, and the nymph ROHIHI, the bright star in the Bull's head personified; that is, allegory apart, this perfonage was born when those orbs were in conjunction. The stars, which form the brilliant cluster called the Pleiades, were respectively personified, in Sanscreet history, by as many beautiful nymphs, the supposed daughters of a renowned rajah, long before the Grecian mythology was formed, and it is but just to allow to the older nation the prior claim of invention. The hydra, also, which the Grecian Hercules flew, that is, which the fun, rifing in the constellation Hercules, with a brighter beam obscured the light of, has been known of old in those writings by the name of Sefhanaga, or King of Serpents. He rules over the inferior hemisphere; for, he fets when the fun rifes; and he possesses, like his Grecian copy, numerous heads, each head adorned with a flaming gem, by which they mean the stars that compose it. From India, however, the Greeks did not directly obtain

obtain this curious piece of mythology; for, Sefhanaga first became the Egyptian Typhon, a word derived from tupbon, deluge, like hydra from udwe, water,) that malignant Typhon, the Scorpion of their zodiac, whom Horus, the fon of Ofiris, that is light, pierced through and through with innumerable arrows. I shall not, for the prefent, purfue these details of astronomical mythology, fince they will necessarily occupy a large portion of the early pages of the intended history; but hasten to the conclusion of this prolonged chapter, by stating, as far as the glimmering light reflected from ancient Grecian records will permit, what other doctrines of a theological and philosophical kind prevailed in Egypt, and were thence imported into Greece during the reign of Amalis,

Two very strong circumstances may be adduced in proof that the Egyptians, at the period of our philosopher's visit, although the superb temples of Luxore were already erected, had not wholly relinquished their attachment to rock-built temples and cavern-devotion; for, that monarch himself, according to Herodotus,* had caused to be hewn out of the solid rock a vast chapel, consisting of one entire

^{*} Herodotus, lib.ii. p. 178, edit. Steph.

entire stone, in the excavation and finishing of which, 2000 chosen masons were employed for three whole years; and this immenfe structure was afterwards conveyed down the Nile, from the city of Elephantis, to Sais, a distance of twenty days sail, where it was placed in the vestibule of the venerated temple of Minerva. The author also records many other erections of Amasis, all in the massy coloffal style of architecture; and, what is very much to our present purpose, informs us, that, behind the aforefaid temple of Minerva, certain sepuichral vaults or shrines were fabricated for the celebration of rites too awful to be named by him; that, close adjoining, there were columns; probably of Phallic defignation, for, the symbol of Ofiris as well as of Seeva, in his generative capacity, was a column of vast height and magnitude; and that there was also an extensive lake, of an orbicular form, lined with stone, intended, doubtless, for the purpose of purification, like the tanks of India. He concludes this important information, fo direct and decifive, by expressly declaring, that in this lake the priefts performed those folemn nocturnal shews, which the Egyptians call MYSTERIES, Ta Xulsow

postpox Aryontion.* It was to revenge an affront offered by Amalis to Cambyles, who had demanded his daughter in marriage, but on whom the former had imposed the daughter of his predecessor Apries for his own, that the Persian monarch invaded Egypt, and, notwithstanding his temporary subversion both of its civil and religious government, evident testimony has, in the preceding pages, been exhibited of the resumption of cavern-worship after his departure, in the plate representing a solar sacrifice, sculptured on a rock in the Thebais, in which the symbols of the Egyptian and Persian devotion are visibly blended.

While Thales sojourned in the caverns of the Thebais, he probably learned from the Egyptian seers that distinguishing axiom of the Ionic philosophy, aquam esse initium rerum, or, that water is the principle of all things; a doctrine so remarkably consonant to the Mosaic and Brahmin philosophy, as well as to that observation of Homer, which he had probably borrowed from the Orphic school, Arears, orman years, warras, terustal, or, "the Ocean is the great source of the generation of all things." Hence slowed all the respect.

respect, and even veneration, paid in Eastern climes to the Lotos, or water-lily, a plant which continually keeps its expanded petals floating above the furface of the waters, to whatever height they rife; and hence the frequent use of that allegorical symbol in the decoration of the temples of Egypt and Greece, In those rocky retreats also, so well calculated for profound meditation on the nature and attributes of God, he learned that other fublime axiom afcribed to him by Clemens Alexandrinus: for, this author affirms, that, " on its being demanded of Thales, what God was? he answered, that which has neither beginning nor end;"* doubtless alluding to that most ancient fymbol, the orb, or circle, by which it will hereafter be more particularly proved the Egyptians delignated the Deity. Thus, also, the Indians, in an ancient shaftah, defining the Supreme Being, afferted, that "God was like a perfect sphere, without beginning and without end."+ It should, however, be remarked, in honour of Thales, that, when he afferted that water was the principle of all things, he meant a subordinate and physical principle; for, according to Cicero, he added,

Deum

⁺ Holwell's Interesting Historical Events, partii. p. 31.

Deum esse eam mentem quæ ex aqua cuncta singeret; or that God was the demiurgic mind which formed all things out of water.* On another octation he asserted, that God was mpercurarer næren, the oldest of all things; and that the world was governed by the strong power of Necessity, meaning no blind necessity, but the immutable decrees of his Providence.†

Cicero, elsewhere, mentions Thales as the first Grecian who made any inquiry into these abstruse metaphysical subjects, and, finally, Herodotus, who, by his own confession, had visited the priests of both Heliopolis and Thebes, appears to me to establish the point of the Grecian theology having been brought out of Egypt, by declaring, that " his nation acknowledged to have received the names of their gods from that country;"‡ for, with those names they doubtless received their wonderful history and mysterious rites; the nefarious orgies of the phallica, celebrated at Athens, which are only a mutilated copy of the Indian worship of the lingam; and the facred pemp of their Osiris and Isis, revived in the Vor. II. Cc Eleufinian

Eleusinian mysteries, whose name and rites, however, evince them to be no other than the Eswara and Isa, that is, the active and passive principles in nature personified, of the Brahmin mythologists.

That the immortality of the foul formed a part of the creed of the Indians and Egyptians has been already proved; and Thales, having imbibed their fentiments on this head, carried this doctrine, probably before Pherecydes, into the schools of Greece. He was accustomed to denominate the foul not only automington, as baving within itself the principle of motion, but also xuntinov, as possessing the faculty of giving motion to other objects; and Laertius informs us, he went so far as to affert, that the loadstone was endowed with a foul, because it possessed the power of attracting iron.* In fact, the various viciflitudes which that foul endured during its terrestrial fojourning, the feveral stages and degrees of forrow and fuffering through which it toiled in its afcent to the SUPREME GOOD, together with certain physical phænomena connected with the history of the allegorical deities of India and Egypt, formed the balis of all the mysteries of Africa and Asia. The stupendous

pendous scenes which were transacting around, as well in the natural as the moral world, the exploring eye of philosophy contemplated with awe and wonder; and, to impress them forcibly on the minds of their pupils, the hoary fages of antiquity caused to be acted over again, in vast subterraneous theatres, the mighty drama of life and of nature. A defire to represent these with correctness and energy was the occasion of giving their dark winding avenues to the holy cavern of Elephanta, and of scooping out the deep recesses of the subterraneous labyrinths of the Thebais. The profound and mystic exhibitions to which Thales and his pupil Pythagoras were witnesses in those rocky shrines; the wonderful fymbols which they there beheld exalted before the view of the initiated; and the hallowed symphonies, unutterable by profane. lips, which they there heard recited; had penetrated their inmost fouls with awe and holy reverence: the remembrance of them was never to be obliterated from their hearts, and they, therefore, carried away and engrafted the theological code and facred pomps of Egypt upon the infant religion and dawning mythology of Greece. The festival ceremonies and religious dogmas of the two nations

nations foon became inseparably, inextricably, blended; and the mysteries of Greece, though a country which had no caverns like those of India and Thebes, bore, in fucceeding ages, all the stamp and distinguishing features of the ancient cavern-worship of Asia; the long proceffion of priefts, bearing facred fymbols, and of fear-struck candidates, conducted during the awful process of initiation through dreary adyta and winding glooms; the whole temple being, at one time, veiled in the deepest midnight darkness, and, at another, flaming with the brightest splendors of the noon-day sun; the shriek of anguish and the shout of transport alternately resounding as struggling virtue fuffered or was triumphant. Ifis, converted into Ceres, again heard her cymbals echo through the vault of Eleufis; while Seeva, indignant, faw the infignia and worship of the deity of Benares usurped by the Athenian Bacchus.
